E. The Contractor shall coordinate the installation of luminaires with mounting surfaces and materials installed under other sections or by others. Coordinate the work with placement of supports, hangers, spacers, stems, aligner canopies, auxiliary junction boxes, and other hardware as required for a complete and proper mounting. Coordinate compatibility of luminaires and associated trims with mounting surfaces at installed locations. All recessed luminaires shall have frames, flanges, or trims that are compatible with the installed ceiling system. All luminaires shall be provided with all mounting and installation accessories as required for a complete and proper installation.

F. The Contractor shall be responsible for luminaire quantities, lengths and clearances required and shall inform the Design Team and/or Owner in writing, at the time the bid submission is made, of discrepancies or variances found with fixtures or details specified herein or in the luminaire schedule and other contract documents.
G. If equal or alternate luminaire Manufacturers are not indicated, the luminaire shall be provided as specified.
H. If equal or alternate luminaire Manufacturers are indicated, proposed fixtures substitutions shall be limited to those Manufacturers listed.
I. The Lighting Consultant is not responsible for the performance of substituted luminaires approved by the Architect and/or Owner without the consent of, or review by, the Lighting Consultant.

1.4 DEFINITIONS

A. BF: Ballast factor.
B. CCT: Correlated color temperature.
C. CRI: Color rendering index.
D. IP: International Protection or Ingress Protection Rating.
E. LED: Light emitting diode.
F. LER: Luminaire efficacy rating.
G. Lumen: Measured output of lamp and luminaire, or both.
H. Luminaire: Complete lighting fixture, including lamp, reflector, housing, and power supply.
I. SSL: Solid state lighting
J. U.L.: Underwriter's Laboratories, Inc.

1.5 SUBMITTALS

A. Submit under provisions of Section 013000 – Submittal Procedures, for submittal purposes.
B. Shop Drawings and Product Data Submittals:

1. Within fourteen days of contract award, successful Contractor shall submit a complete list of lighting products intended to be furnished with manufacturer and catalog designations, along with currently quoted lead times for delivery of same. The lead times shall include time allotted for shop drawing completion and review for those fixtures requiring such. Should the Contractor anticipate that the delivery schedule of specified product may adversely impact the construction schedule, it shall be brought to the attention of the owner at this time. Request for fixture substitution on the basis of delivery schedule will not be permitted.
2. Within fourteen days of bid award, the Contractor shall provide a complete list of lamps, which will be furnished on the project. This list shall be organized alphabetically by the luminaire type indicated on the luminaire schedule, and include the manufacturer and exact model number of each lamp. Up to three samples of any listed lamp shall be supplied at no additional cost to the project, if so requested by the Design Team and/or Owner.
3. Alternate products other than those listed by name in the specification will not be considered without prior written consent from the Design Team and/or Owner.
4. Submit shop drawings and product data in accordance with the requirements of the general conditions and as described herein and elsewhere in the contract documents.
5. The Contractor shall submit data for approval of the Architect, detailed shop drawings and product data for luminaires specified herein and elsewhere in the contract documents. Luminaires shall not be installed without the approval of its shop drawings, product data and/or sample.

6. Shop drawings and product data shall indicate the name of the project, fixture type, manufacturer's name, luminaire catalog number and catalog number for lampholders, components, ballasts, drivers, or transformers, diffusers, accessories, internal protective components and all necessary information including, but not limited to: detail of luminaire, clearances, dimensions, components, mounting hardware, method of field assembly, materials and weights; other pertinent information, to show compliance with contract documents with regard to metal thickness and support methods.
7. Prior to fabrication and submittal of the shop drawings and product data, the Contractor shall coordinate luminaires and conduit entries with equipment, ducts, pipes, openings, etc.
8. Custom luminaire fabrication details shall be drawn at either full size or half-size scale. Fixture fabrication details shall illustrate a minimum of three critical views indicating fabrication and assembly methods, materials, and materials' gauges and finishes, and specifications of lighting equipment and appropriate electrical, mounting and accessory hardware.
9. Where luminaires are mounted in continuous rows or in architectural coves, shop drawings shall indicate exact luminaire locations, layout, connecting components, coupling plates, changes in elevation, corner details, assembly methods, and reinforced concrete base details.
10. Submit product data which includes luminaire type, luminaire illustration with mounting details, luminaires certification of suitability for use in locations indicated, and photometric test reports which include the following:

    a. Complete candlepower summary with graphical and numerical data in 5 degree increments for up and down quadrants and at 22-1/2 degree azimuth increments including normal and parallel.
    b. Visual comfort probability data.
    c. Coefficients of utilization data.
    d. Luminaire efficiency.
    e. Lamp description.
    f. Lamp lumen output.
    g. Zonal lumens and percentages.

11. Substitutions

    a. Substitutions for the specified lighting products are not acceptable and will not be considered. Failure to include one of the specified products as a part of the base bid may, at the discretion of the owner, invalidate the entire lighting product bid and exclude the contractor from further consideration.
    b. Should the Contractor elect to consider products other than those specified, the items must be submitted fourteen days in advance of the bid. Failure to submit within that deadline constitutes a guarantee that the specified products will be supplied. The lighting designer will invoice the contractor, at senior designer hourly rates, to review any product not listed in the specification. Submittal of a bid for this project shall include a written acknowledgment of these terms from the contractor.
    c. Substitutions shall be submitted in accordance with the requirements of the general conditions and as described herein and elsewhere in the contract documents.
    d. The Manufacturer shall submit, upon request, a prototype sample of the substitute luminaire for evaluation of compliance with the contract documents. Shop drawings will not be acceptable in place of the prototype. A submittal for evaluation shall be an operable 120 volt non-returnable sample, complete with lamp(s), 72 inch grounded cord and plug and the specified finish.

e. The Architect will be the sole judge in determining whether the prototype sample complies with the contract documents and reserves the right to disqualify proposed manufacturer or submitted item.
f. Photometric test reports shall be submitted for each luminaire offered in substitution for a luminaire specified.

1.6 SAMPLES:

A. Upon request, submit samples of custom luminaires, modified, and substitution items (including substitutions from Manufacturers included as Acceptable Alternates) for the purpose of ascertaining photometric performance, quality of visible parts and details, maintenance features, methods of installation, and safety features. These samples shall be submitted for approval at no expense to the Owner or Design Team, with transportation prepaid. The samples will be returned to the Contractor after the review has been completed at the expense of the Contractor.
B. Upon request, submit finish samples from Manufacturers for review of finishes, including any custom finishes.

1.7 SPECIALTY LUMINAIRES:

A. All custom luminaires require a prototype as part of submittals and to be submitted prior to commencement of fabrication, unless otherwise directed by the Owner. The prototype shall be a working sample with the same diffuser, material, finishes, etc. as the specification. The purpose of the prototype will be to review construction, lamp placement within luminaire, lamp type, optical assembly, finishes, etc. Modification may be required as a result of the prototype review. These modifications and others that do not materially affect the cost of the luminaire shall be incorporated at no additional cost to the Owner, Architect, Lighting Designer, or Engineer.

1.8 CLOSEOUT SUBMITTALS

A. Operating and Maintenance Data: For all lighting equipment and luminaires to include emergency, operation, and maintenance manuals.

1. Provide a list of all luminaires, lamps, drivers, ballasts, and transformers used on the project; use ANSI and Manufacturer’s codes.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver luminaires individually wrapped in factory fabricated fiberboard type containers.
B. Handle luminaires carefully to prevent breakage, denting, and scouring of the luminaire finish.
C. Store products in a clean, conditioned, dry space, protected from weather and in original manufacturer’s packaging in accordance with manufacturer’s written instructions until ready for installation.
D. Luminaires shall be protected from dust during installation.

1.10 QUALITY ASSURANCE

A. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by an independent testing agency, with the experience and capability to conduct the testing indications, that is an NRTL as defined by OSHA in 29 CFR 1910.7.
B. Comply with NFPA 70, as required by federal, state, and local codes.
C. Specified Manufacturers are listed to define the requirements for quality and function of the specified product.
D. All luminaires shall meet all required local, state, and/or national building, electrical, and energy codes and regulations.
E. Mockups: Provide luminaires for mock-ups as requested by the Design Team and/or Owner.

1. Obtain Design Team and Owner's approval of luminaires for mockups prior to starting installations.
2. Remove mockups when directed. Sample luminaire for mockup may be reinstalled with consent of the Owner.
3. Install luminaires for mockups with power and control connections.

1.11 COORDINATION

A. Coordinate layout and installation of luminaires and components with all other trades.

1.12 WARRANTY

A. Comply with Division 1 requirements.
B. General Warranty: Any special warranty specified in this Section shall be in addition to, and run concurrent with, other warranties made by the Contractor under requirements of the Contract Documents.
C. Special Warranty for Luminaires and Components: Manufacturer's standard form in which manufacturer of luminaire agrees to repair or replace components that fail in materials or workmanship within a specified warranty period.

1. Warranty period for LED luminaires: Five (5) years from date of Substantial Completion.
2. Warranty period for all other luminaires: One (3) year from date of Substantial Completion.
3. Warranty period for drivers: Five (5) years from date of Substantial Completion.
4. Warranty period for ballasts and transformers: Three (3) years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with requirements, provide products as listed in the Light Fixture Schedule.

2.2 GENERAL REQUIREMENTS FOR LUMINAIRES AND COMPONENTS

A. Recessed Fixtures: Comply with NEMA LE 4.
B. Luminaires shall be manufactured to the specifications described above and as indicated in the Light Fixture Schedule and Contract Documents. Acceptable alternate Manufacturers are

included in the Light Fixture Schedule. No other alternate Manufacturers will be considered without written consent of the Design Team.

C. Provide proper thickness of code gauge sheet steel so that luminaires are rigid, stable, and will resist deflection, twisting and warping under normal installation procedures, re-lamping, and maintenance.

D. Luminaire designs shall include, as applicable, plaster frames, trim rings, shrouds, flanges, backboxes, support hardware, and other components required for proper installation of the luminaire.

E. Luminaires with covers, cones, or diffuser frames, which are to be mounted above twelve feet from the finished floor level, shall be provided with safety chains or other acceptable backup means of support to properly secure such items to main housing.

F. Fixtures shall be Underwriter Laboratory approved for their application and location and have the appropriate U.L. label adhered to the fixture visible within the housing of each fixture.

G. Rows of luminaires shall be designed with concealed splice plates and shall be free of light leaks. Components such as reflectors, trims, diffusers and other visible items shall be properly aligned with no overlaps, gaps, or other imperfections.

H. Adjustable fixtures interior and exterior shall provide methods to lock fixture in place. This includes rotation and tilt adjusting.

I. Hardware shall be concealed where it is appropriate, unless it is a design feature.

J. Where hardware is exposed the hardware is to be painted to match adjacent surfaces unless otherwise noted.

K. Materials, accessories, and other related fixture parts shall be new and free of defects, which may impair their character, appearance, strength, ability, or function. Fixtures must be protected from damage from the time of fabrication until final acceptance of work.

L. Contractor is responsible for coordination of special mounting conditions for custom fixtures and must supply necessary mounting devices.

M. Fixtures shall be completely wired at the factory. Fixtures shall come with electrical wiring in accordance with local codes and in accordance with actual installation requirements.

N. Provide neoprene gasketing, stops, and barriers where required to prevent light leak and/or water and water vapor penetrations. Luminaires installed in the following, but not limited to, locations shall have neoprene gasketing:

1. Locker rooms
2. Aquatic areas
3. Aquatic mechanical equipment rooms
4. Kitchens

O. Provide finished product with smooth clean ground metal edges, trims, and frames as well as tight fitting connections, hinges, and closures.

P. Provide access for servicing the installed luminaire and for replacement of electrical parts without removal or disassembly of the luminaire.

Q. Unless otherwise noted, provide emergency battery packs or stand-by systems as required for luminaires connected to emergency circuits.

R. All luminaires shall operate on normal/emergency power, unless otherwise directed by the Design Team.

S. Low voltage fixtures which use a remote transformer must be supplied with transformers as necessary to complete a working installation. Transformers must be supplied by the fixture manufacturer or approved by the fixture manufacturer to maintain the U.L. rating.

T. Lead wires for luminaires utilizing tungsten halogen lamps shall be rated for not less than 200°C operation, and shall be rated for 250°C when temperature warrants. Minimum individual fixture wiring shall be number 18 gauge. Terminate wiring for recessed fixtures, except fluorescent units, in external splice box.

U. Luminaire doors shall be provided as follows: Positive light seal, concealed safety hinges, and inconspicuous "positive spring loaded" holding latches, which are hingeable from either side and operable without the use of tools.
V. Where luminaires are mounted in tandem in continuous uplight or downlight coves, the Contractor shall field coordinate fixture quantity and length required to provide a continuous band of light without gaps to within 6" of row ends.
W. All sconces shall be provided with recessed junction boxes.
X. Remote drivers shall be concealed from view of the public and located in accordance with Design Team recommendations.

2.3 SOLID STATE LIGHTING (LED)

A. General:

1. Manufacturer shall have a minimum of five (5) years experience in the Manufacturer and design of LED products and systems and no less than one hundred (100) North American installations.
2. Include all components necessary for a complete installation. Provide all power supplies, synchronizers, data cables, and data terminators for a complete working system.
3. All peripheral devices and control software are to be provided by and shall be the responsibility of a single entity. All components shall perform successfully as a complete system and shall operate as described in control narrative documents.
4. All LED sources used in LED luminaire shall be of proven quality from established and reputable LED Manufacturers.
5. Prior to the shipment of the luminaires from the factory, all luminaires shall be tested with all components to ensure the luminaire is functioning properly.

B. Replacement and Spares:

1. Manufacturers shall keep record of original bin for each LED module and have replacement modules from the same bin available for three (3) years after the date of installation. System components shall not become obsolete for five (5) years. Manufacturer shall keep an inventory of replacement parts (source assembly, power and control components) or provide replacement parts that fit into the original luminaire and provide equivalent distribution and lumen output to the original.
2. All parts of system shall be replaceable in field. Manufacturer shall accept returned product and/or components for recycling or re-use.
3. System shall carry a full warrantee for a minimum of five (5) years. Manufacturer shall be responsible for cost of labor to replace any component of the system that fails within 2 years of Substantial Completion.

C. Products and Components – Performance

1. LED luminaries and components shall be UL listed or UL classified, CE certified, and PSE marked.
2. The diodes that make up the LED board shall not vary in correlated color temperature by more than or less than 100K.
3. All LEDs of the same type shall be from the same production facility and the same production run.

4. All manufacturing processes and materials shall conform to the requirements of the European Union's Restriction on the Use of Hazardous Substances in Electrical and Electronics Equipment (RoHS) Directive, 2002/95/EC.
5. LEDs shall comply with ANSI/NEMA/ANSLG C78-377-2008 – Specifications for the Chromaticity of Solid State Lighting Products.
6. Dedicated white LEDs shall have a rated source life of a minimum of 50,000 hours under normal operating conditions, unless otherwise specified.
7. Maximum power consumption for the luminaire shall be determined by the application. The luminaire shall not consume power in the off state
8. The luminaire shall operate from 60HZ AC line over a voltage ranging from 108 VAC to 305 VAC. The fluctuations of the line voltage shall have no visible effect of the luminous output.
9. Total harmonic distortion (current and voltage) induced into an AC power line by a luminaire shall not exceed 10 percent.
10. To ensure fixture quality, fixture shall have been tested under accelerated life test conditions including an operating temperature span of 160 degrees C, and cyclic loading up to 60G.
11. The luminaire on-board circuitry shall include fused surge protection devices to withstand high repetition noise transients as a result of utility line switching, lightning strikes, and other interferences. The surge protection device shall protect the luminaire from damage and failure for common mode transient peak voltages up to 10kV (minimum) and transient peak current up to 5 kA (minimum). The surge protection device shall be UL listed and shall be tested per the procedures in ANSI/IEEE.
12. The circuitry shall prevent all visible flicker to the naked eye over the voltage range specified above.
13. The depreciation of the light from the luminaire shall not exceed 30 percent over the expected operating life.
14. Fixture assembly shall include a method of dissipating heat so as to not degrade life of source, electronic equipment, or lenses. LED fixture housing shall be designed to transfer heat from the LED board to the outside environment. Fixture housing shall have no impact on life of components.
15. Manufacturer shall supply a range of permissible operating temperatures in which system will perform optimally.
16. High power LED fixture shall be thermally protected using one or more of the following thermal management techniques: metal core board, gap pad, and/or internal monitoring firmware.
17. All products included in system shall use Mil-Std 810F, Random Vibration 7.698g as a minimum standard. In installations subject to vibration, luminaries shall be installed with vibration isolation hardware to sufficiently dampen vibrations.
18. For wet and damp use, LED-based luminary itself shall be sealed, rated, and tested for appropriate environmental conditions, not accomplished by using an additional housing or enclosure.
19. All hardwired connections to LED fixtures shall be reverse polarity protected and provide high voltage protection in the event connections are reversed or shorted during the installation process.
20. The LED luminaire shall be operated at constant and carefully regulated current levels. LEDs shall not be overdriven beyond their specified nominal voltage and current.
21. RBG LED fixtures shall utilize an equal combination of high brightness red, blue and green LEDs, unless otherwise noted, to provide up to 16.7 million additive RGB colors and shall be capable of at least 8-bit control.
22. Manufacturer shall be able to provide supporting documentation of the product meeting third party regulatory compliance.

23. Manufacturer shall ensure that products undergo and successfully meet appropriate design and manufacturability testing including Design FMEA, Process FMEA, Environmental Engineering Considerations and Laboratory Tests, IEC standards and UL/CE testing.
24. All LED fixtures (100% of each lot) shall undergo a minimum eight-hour burin-in test during manufacturing.
25. Manufacturer shall provide optical performance, polar diagrams, and relevant luminance and illuminance photometric data based on test results from an independent Nationally Recognized Testing Lab (NRTL).
26. Manufacturer shall provide photometric data in IES file format in accordance with IES LM-63-2002, based on test results from an independent NRTL.
27. Manufacturer shall provide mechanical, electrical, network communication and environmental specifications.

    a. LED fixture shall be network controllable via digital control.
    b. The LED system shall use integral and differential nonlinear control.
    c. Constant data transmission rates shall be employed, resulting in the output being independent of distance of cable between power supply and light source within the specified length.
    d. Power/data supply outputs shall have current limiting protection.
    e. Power/data supply shall provide miss-wiring protection.
    f. Power/data supply shall have power factor correction.
    g. Power/data supply shall provide connections that are conduit-ready or clamp-style connections in the case of low-voltage wiring.
    h. Power/data supply shall come with a housing that meets a minimum IP20 rating for dry location installation
    i. Power/data supply shall be UL listed for Class 1 or Class 2 wiring

28. LED system shall have a selectable means of external control via a data network.

D. Each LED fixture and /or node shall have the capability to be set to a unique and individual address. Address shall be selectable through on board switches or by an external hardware of software method.
E. Retrofit lamps

1. Shall meet DOE's Energy Star or Design Light Consortium performance criteria for qualified screw-in or pin-based LED lamps.
2. Shall have Lamp CCTs conforming to ANSI C78.377A color binning and utilize a 3 step MacAdam Ellipse Algorithm binning process (Philips Optibin or equal) within each retrofit lamp for greater CCT consistency.
3. The CCT shall be 3000K unless otherwise stated. The CCT between the same product shall not vary more than 100K. The CRI shall be ≥80.
4. Each lamp shall have a power factor ≥90%.
5. Each lamp shall have total harmonic distortion (THD) <10%
6. Shall be tested in accordance with LM-79-08 electrical and photometric measurements.
7. Shall be tested in accordance with LM-80 lumen depreciation test. The L70 rated life result shall be a minimum of 25,000 hours for MR16 and candelabra lamps; 40,000 hours for PAR 20, 30, 38 and BR30 lamps.
8. Shall carry a 3 year minimum product warranty covering failure of all electrical components.

F. Luminaires

1. The luminaire manufacturer shall be registered as a DOE Quality Advocate.

2. Shall meet DOE's Energy Star or Design Light Consortium performance criteria
3. The luminaire manufacturer shall provide the manufacturer's name of the LED being used in the luminaire.
4. Shall be UL, or ETL, listed and be furnished complete with LEDs and power supplies.
5. LED light source packages, arrays or modules used in the luminaire shall be tested in accordance with LM-80 lumen depreciation test. The L70 rated life result shall be a minimum of 50,000 hours.
6. Shall be tested in accordance with LM-79-08 electrical and photometric measurements.
7. The CCT shall be 3000K unless otherwise specified. The CRI shall be ≥80 unless otherwise specified.
8. Each luminaire shall have a power factor ≥90%.
9. In instances where the LED sources are to be mounted directly into the architecture, such as installing a strip LED by using an adhesive tape, the LED manufacturer shall provide a recommended heat sink volume adequate to achieve rated life at L70.
10. Each luminaire shall carry a 3 year minimum product warranty covering failure of ALL electrical components.
11. All luminaires shall be within a 2-step MacAdam Ellipses on the black-body curve, unless otherwise specified.

G. Power Supplies

1. LED power supplies shall operate LEDs within the current limit and voltage specification of the manufacturer.
2. Shall operate from 60Hz input source and have input power factor >90% and a minimum efficiency of 70% at full rated load of the driver.
3. Shall have short circuit and overload protection.
4. Shall have a minimum starting temperature of 0°F and a maximum case temperature rating of at least 70°C.
5. Power supply output shall be regulated to +/-5% across published load range.
6. Shall have a Class A sound rating.
7. Shall comply with the requirements of the Federal Communications Commission (FCC) rules and regulations, Title 47CFR part 15, non-consumer (Class A) for EMI/RFI.
8. Shall contain no PCBs.
9. Shall carry a five (5) year minimum warranty from date of Substantial Completion against defects in material or workmanship, including a replacement, for operation at or below the maximum case temperature specification. (For LED lamps and internal power regulation components for defects resulting in a fixture lumen depreciation >30%.)
10. Dimmable power supplies shall allow continuous, flicker-free dimming through entire listed range of light output.

2.4 LOW VOLTAGE LIGHTING

A. Where remote transformers are specified, transformers must be installed in accessible areas large enough to dissipate the heat of the transformer. Temperatures should not exceed 100 degrees Fahrenheit (38 degrees Celsius).
B. Transformers shall be rated for operation on the electrical system voltage to which they are shown connected.
C. Transformers should be mounted as close to the feed lampholders as practical to keep the secondary feed as short as possible.
D. Low voltage transformers shall be fused on the primary and secondary side with protection devices sized as appropriate to conductors, lamps, and transformers.

E. Contractor is responsible to lay out and install low voltage systems to prevent excessive light loss due to voltage drop.
F. Contractor to install the system to meet local codes.

2.5 SPECIALTY FIXTURES

A. GENERAL:
1. Specialty Fixtures include fixture types FD1y, FD2y, PL3, PL4, WD7y, WD8y, and WD9y
2. Acceptable and acceptable alternate manufacturers are included in the Light Fixture Schedule. Substitutions are not permitted.
3. Manufacturer for fixture types PL3 and PL4 must supply a 24” working sample with plug and cord for purposes of a design/client team review and complete shop drawings to design team for review for bid. Sample fixtures will become property of the Client or their design team.
4. Fixtures and components shall meet UL or ETL requirements for use in their proposed location.
5. Manufacturers must provide heat testing data to confirm UL or ETL ventilation requirements.
6. Exposed hardware shall be concealed from view below, except where noted.
7. Acceptable manufacturers are listed in the fixture schedule and deviation from those listed will not be accepted.
8. Materials, accessories and other related fixture parts shall be new and free of any defects which in any manner may impair their character, appearance, strength or ability and function effectively protected from damage or injury from the time of fabrication until final acceptance of work.
9. Aluminum extrusions shall be free from tool marks, and dents and shall have accurate angles as sharp as compatible with the gauge of the required metal. Intersections and joints shall be formed true of adequate strength and structural rigidity to prevent distortion after assembly.
10. Housing shall be so constructed that drivers and LED module, electrical components are easily accessible and replaceable from above, without removing fixtures from their mountings or disassembly of adjacent construction.
11. Fixtures shall be completely wired at the factory. Fixtures shall come with electrical wire whips in accordance with local codes and in accordance with actual installation requirements.
12. Leaks within fixtures and between fixtures and mounting surface will not be tolerated.
13. Steel and aluminum fixtures, screws, bolts, nuts and other fastening and latching hardware shall be cadmium or equivalent plated. For stainless steel fixtures, hardware shall be stainless steel or bronze. Fixtures must be assembled and gasketed properly to prevent galvanic action.

B. FIXTURE DESCRIPTIONS:
1. FD1y
   a. Shall be a surface ceiling mounted fixture.
   b. The dimensions shall be 36” diameter and approximately 12” depth.
   c. The acrylic bowl shall be nominally 20” diameter, with a minimal finial in the center.
   d. The fixture detailing shall match the fixture drawing in cut sheets.
   e. An array of carved and cast detail indicating Black-eyed Susan motif surround the glass bowl.
   f. There will be minimal set screws to fasten the components, finished to match the metal.
   g. No other hardware will be visible from the front or side view of the fixture.

h. The metal shall be brass construction, with a standard patina finish, selected by architect. Samples of finishes shall be provided upon request.
i. Drawing and rendering /sample of the proposed leaf pattern shall be submitted with bid.
j. Lamping shall be (10) medium base sockets to house a dimmable 8 watt LED A19 frosted lamp, as shown on light fixture schedule.
k. Lamps must be rated for use in an enclosed fixture. Corncob type or substitute LED retrofit lamps are not acceptable.
l. Manufacturer to provide a maintenance directive for access to the lamps as part of the Operations and Maintenance Manual.

2. FD2
   a. Shall be a surface ceiling mounted fixture.
   b. The dimensions shall be 60” diameter and approximately 18” depth.
   c. The acrylic bowl shall be nominally 35” diameter, with a minimal finial in the center.
   d. The fixture detailing shall match the fixture drawing in cut sheets.
   e. An array of carved and cast detail indicating Black-eyed Susan motif surround the glass bowl.
   f. There will be minimal set screws to fasten the components, finished to match the metal.
   g. No other hardware will be visible from the front or side view of the fixture.
   h. The metal shall be brass construction, with a standard patina finish, selected by architect. Samples of finishes shall be provided upon request.
   i. This fixture will be located under a covered portico on the exterior of the building. The fixture shall be wet location listed suitable for mounting condition.
   j. There shall be a double bowl configuration to prevent visible insect and dirt build up into the bowl and other components.
   k. The mounting plate shall be sloped at edges to discourage bird nesting.
   l. Lamping shall be (16) medium base sockets to house a dimmable 8 watt LED A19 frosted lamp, as shown on light fixture schedule. Corncob type or substitute LED retrofit lamps are not acceptable.
   m. Manufacturer to provide a maintenance directive for access to the lamps as part of the Operations and Maintenance Manual.

3. PL3
   a. Shall be a continuous suspended extruded aluminum ring, nominally 18’-0” diameter, with a section profile of 7.5” x 2.25”.
   b. The ring shall be powder coated painted a RAL color selected by Architect. Samples of finishes shall be provided upon request.
   c. The ring shall be suspended by (12) shrouded stainless steel cables equally pitched and vertically adjustable from 0’-8” to 1’-6”.
   d. The ring shall have one single power feed and 2 conductor control cables for DALI-2 control signal.
   e. Power shall be 350mA from integral EldoLED DALI-2 drivers, providing 0.1% dimming and individual control of each head.
   f. Power feed shall be shrouded in painted tube, finish to be an RAL powder coat selected by architect.
   g. Housing shall support (24) adjustable accent light fittings, each with 11.9 watt, Xicato XOB 9.8mm in 3000k, 90CRI LED sources, evenly pitched throughout the ring.
   h. Each accent light shall be a round 3.25” housing, adjust 45 degrees from nadir, 360 degree rotation and lock both adjustments using hex head set screw accessible from the front of the fitting and deliver approximately 1,000 lumens.
   i. Each accent light shall have a maximum of 10-18 degree beam with the following field interchangeable optics: 25-30 and 30-40 degrees.
   j. Each head shall be provided with a hexcell louver accessory lens.

4. PL4
   a. Shall be a continuous suspended extruded aluminum frame, nominally 52'-8" x 32'-2" rectangle, with a section profile of 7.5" x 2.25".
   b. The frame shall be powder coated painted a RAL color selected by Architect. Samples of finishes shall be provided upon request.
   c. The frame shall be suspended by (36) shrouded stainless steel cables equally pitched. Cables shall be capable of adjust length vertically on site from 0'-8" to 1'-6".
   d. The frame shall have one single power feed and 2 conductor control cables for DALI-2 control signal.
   e. Power shall be 350mA from an integral EldoLED DALI-2 drivers, providing 0.1% dimming and individual control.
   f. Power feed shall be shrouded in painted tube, finish to be an RAL powder coat.
   g. Housing shall support (69) adjustable accent light fittings, each with 11.9 watt, Xicato XOB 9.8mm in 3000k, 90CRI LED sources, evenly pitched throughout the frame.
   h. Each accent light shall be a round 3.25" housing, adjust 45 degrees from nadir, 360-degree rotation and lock both adjustments using hex head set screw accessible from the front of the fitting and deliver 1,000 lumens.
   i. Fixture heads shall have an accessory holder to house up to two accessories.
   j. Type A Heads:
      1) Fixture will have (55) type A heads with a 10-18 degree beam
      2) Provide a linear spread accessory lens and lightly frosted accessory lens per head.
   k. Type B Heads:
      1) Fixture will have (14) type B heads with a 10-18 degree optic with the following field interchangeable optics: 25-30, 30-40 degrees.
      2) Provide a hexcell louver accessory lens per head.
5. WD7y
   a. Shall be a two headed globe sconce mounted on a rectangular backplate.
   b. The dimensions shall be 29" height, 20" wide and 10" projection.
   c. The fixture detailing shall match the fixture drawing in cut sheets.
   d. Maximum of (8) hex screws on the back plate, finished to match the backplate.
   e. There will be small set screws to fasten the globe to the arm, finished to match.
   f. No other hardware will be visible from the front or side view of the fixture.
   g. The metal shall be brass construction, with a standard patina finish, selected by architect. Samples of finishes shall be provided upon request.
   h. The lens shall be white opal acrylic.
   i. Fixture shall be controlled by dimming control system capable of dimming to a maximum of 10% light output.
   j. The medium base socket shall house a dimmable 8 watt LED A19/3000k lamp, delivering approximately 800 lumens. Corncob type or substitute lamps are not acceptable.
   k. The globe must be removable in the field to access the lamp for maintenance.
6. WD8y
   a. Shall be a single headed globe sconce mounted on a rectangular backplate, suitable for wet location, exterior conditions where in direct exposure to the elements.
   b. The fixture detailing shall match the fixture drawing in cut sheets.
   c. The dimensions shall be nominally 30" height, 16" wide with 24" projection.
   d. There will be a maximum of (2) ball screws on the back plate, finished to match the backplate.
   e. There will be small set screws to fasten the globe onto the arm, finished to match.
   f. No other hardware will be visible from the front or side view of the fixture.

g. The metal shall be brass construction, with a standard patina finish, selected by architect. Samples of finishes shall be provided upon request.
h. The lens shall be a white opal acrylic.
i. Fixture shall be controlled by dimming control system capable of dimming to a maximum of 10% light output.
j. The medium base socket shall house a dimmable 8 watt LED A19/3000k lamp, delivering approximately 800 lumens. Corncob type or substitute lamps are not acceptable.
k. The globe must be removable in the field to access the lamp for maintenance.

7. WD9y
   a. Shall be a single headed sconce mounted on a rectangular backplate.
   b. The dimensions shall be 29” height, 8” wide and 10” projection.
   c. The fixture detailing shall match the fixture drawing in cut sheets.
   d. Maximum of (4) hex screws on the back plate, finished to match the backplate.
   e. There will be small set screws to fasten the globe to the arm, finished to match.
   f. No other hardware will be visible from the front or side view of the fixture.
   g. The metal shall be brass construction, with a standard patina finish, selected by architect. Samples of finishes shall be provided upon request.
   h. The lens shall be a white opal acrylic.
   i. Fixture shall be controlled by dimming control system capable of dimming to a maximum of 10% light output.
   j. The medium base socket shall house a dimmable 8 watt LED A19/3000k lamp, delivering approximately 800 lumens. Corncob type or substitute lamps are not acceptable.
   k. The globe must be removable in the field to access the lamp for maintenance.

2.6 SUSPENDED FIXTURES

A. Where fixtures are mounted in a continuous row, fixtures eight feet in length shall have stems placed within 2 feet of fixture ends. Stems shall be spaced symmetrically. A fixture four feet or three feet in length, placed in rows shall have a stem connected to the center fixture.
B. Suspended fixtures shall be stem-mounted and shall be free to swing 20 degrees in any direction. Ceiling swivels shall be of the ball aligner type permitted on the drawings. Chain suspension may be used only where specifically permitted on the drawings. Chain shall be heavy duty, nickel-plated suitable for the weight of specific fixtures.
C. Provide redundant support for pendant-mounted fixtures.

2.7 TRACK

A. Contractor to assemble track fixtures and accessories prior to installation.
B. Contractor will supply necessary connectors and adapters and necessary mounting and electrical feed equipment.
C. Contractor to mount fixtures to track. Final aiming to be done with the guidance of the Lighting Consultant.

2.8 ACCESSORIES & LENSES

A. Plastic used for lenses and diffusers shall be formed of colorless 100% virgin acrylic as manufactured by Rohm & Haas, DuPont, or acceptable equal, unless otherwise noted.

B. Glass used for lenses, reflectors, diffusers, and luminaires shall be tempered for high impact and heat resistance. The glass shall have a transmittance of not less than 88%, unless otherwise indicated. For exterior luminaire use tempered borosilicate glass Corning #7740 or acceptable equal.
C. Lenses, louvers, and other light diffusing elements shall be removable and positively held so that hinging or other normal motion will not cause them to drop out.
D. Lenses shall be turned over to the Owner clean and free of dust or finger prints.
E. Spread lenses shall be provided with notches or locking devices to insure that lens orientation is not disturbed during luminaire lamp replacement or cleaning.

2.9 LAMPS

A. Provide lamps as indicated on the luminaire schedule and the applicable contract documents.
B. Lamps of a given type shall be produced by one manufacturer.
C. Provide 10% spare lamps for fixtures.
D. Lamps used in food preparation areas and not protected by a suitable lens diffuser shall be fully protected with Teflon coating, tube guards, or other means as required by the N.E.C. Teflon coating shall be as provided by Shatter-Shield or equal.
E. LED retrofit lamps shall be 120V unless otherwise specified.
F. Provide rough service lamps for fixtures located in plenum air chambers and elevator or escalator pits.

2.10 EMERGENCY LIGHTING

A. Refer to Division 26.

2.11 EXIT SIGNS

A. Refer to Division 26.

2.12 LIGHTING CONTROLS

A. Refer to Division 26.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Provide luminaires at locations, and of types, as indicated on the contract drawings.
B. Contractor shall be responsible for coordinating with the other trades to ensure and maintain adequate recess clearance as lighting positions are critical and shall take precedence over other concealed building systems.
C. Contractor shall be responsible for installing fixtures with proper ventilation so as not to exceed the temperature rating of the lighting fixtures or lamps.
D. Notify the Architect about field conditions at variance with plans and/or specifications before commencing installation. Failure to do so shall exonerate the Architect from responsibility for

problems resulting from same, and work required to correct the discrepancy shall be performed by the Contractor with no additional compensation.

E. Prior to ordering lighting equipment, the Contractor shall verify locations and recess depths, final voltages, and ceiling trims compatibility. Additional charges for failure to verify locations will not be allowed.

F. Plaster frames for recessed fixtures shall be installed in a rigid manner so as not to allow fixture frame or housing to move or shift when trim is removed or fixture is re-lamped.

G. For bracket-mounted fixtures, provide metal plate attached to outlet box with threaded holes suitable for supporting the fixture rigidly in design position. Studs shall be steel or malleable iron, and galvanized. Die cast studs shall not be used. Electrical boxes shall be securely mounted and not move in the wall or shall be reset and wall refinished at the Contractor's expense.

H. Where required by the local building or health department, provide approved wire guards and or plastic sleeves over fixtures.

I. Install luminaires properly and safely. Provide hangers, rods, mounting brackets, supports, frames, yokes, support bars and other equipment required for a complete installation.

J. Luminaires shall be complete with lamps of the type noted in the schedules and shall have metal parts, glassware, plastic diffusers etc., free from scratches, cracks, and other defects. Items damaged during shipment handling, or installation shall be replaced without expense to the Owner.

K. Parabolic fixture care: Parabolic fixtures to be installed with Mylar cover shall be U.L. listed for temporary lighting. Upon completion of work, remove Mylar cover with white gloves and assure louvers are free from dust and fingerprints.

L. Fixtures installed with plastic lenses shall be cleaned and de-staticized after installation. Install and leave with no fingerprints or dirt marks on the lens or diffuser. Use white gloves if necessary.

M. Lamps must be operational at time of turn over to the owner.

N. Luminaires to be cleaned prior to opening the facility.

O. Luminaires shall be packaged with complete instructions and illustrations showing proper installation procedures. Install luminaires in strict conformance with manufacturer's recommendation and instructions.

P. Contractor is required to protect fixtures from damage during installation and up to time of acceptance by the Architect. Broken fixtures, glassware, plastics, lamps etc. must be replaced by the Contractor with new parts without expense to the owner.

Q. Whenever a luminaire is operated as a work light during construction it shall be re-lamped with the project-specified lamp just prior to turnover of the area to the owner.

R. Fixtures shall be installed so that no labels will be visible under normal operating conditions of the fixture.

S. If fixtures are installed in a fire rated ceiling, the Contractor will preserve the fire rating according to the UL assembly number.

T. Light poles shall be grouted to fill the space between the pole base plate and the concrete base.

U. Install lamps in fixtures.

V. Wall slot fixtures are to be installed prior to the finishing of walls where they are found. They are to be used as the sole work light when finishing the adjacent wall.

W. When multiple fixtures of a given voltage are mounted in trees, power shall be provided from base of tree to junction box on tree strap in tree canopy (or at base of bulb for palm trees) through single exterior grade MC cable with black coating.

X. Matte white face plates for pinhole and slot downlights shall be painted prior to installation to match the soffit in which each is to be located.

Y. Remote ballasts and transformers shall be concealed in dry, accessible locations unless otherwise directed.

Z. All lamps requiring burn in shall be burned in per individual lamp manufacturer's recommendation by Contractor, or they shall be provided pre-seasoned.

3.2 AIMING AND ADJUSTMENTS

A. Adjustable lighting units shall be aimed, focused, and locked, etc., by the Contractor under the supervision of the Design Team and at the discretion of the Design Team.
B. Aiming and adjustments shall be carried out after installation is complete and at least 5 business days in advance of the project completion date in order to schedule the fixture focusing sessions. Ladders, lifts, scaffolding, and/or other means of accessing all light fixtures shall be furnished by the Contractor at the direction of the Design Team. As aiming and adjusting is completed, locking set screws, bolts, and nuts shall be tightened securely.
C. During aiming and adjusting the units, the Contractor shall provide

1. Tools for unlocking, locking, and/or adjusting fixtures as required, along with gloves suitable for handling the hot lamps.
2. All specified accessory lenses, interchangeable optics, and other components (either installed or on hand as directed in the lighting fixture schedule).
3. Correct lamps installed.
4. Spare lamps as required to replace any burned out lamps

D. The Contractor shall coordinate with the other trades and the Owner to ensure that light fixtures to be aimed are accessible.
E. The Contractor shall coordinate with the other trades and the Owner to ensure that focusing sessions are schedules during times when all of the light fixtures can be turned off/on during the entire duration of the sessions. Individual circuits shall have the ability to be turned on/off independently of the other lighting circuits.
F. Where possible, units shall be focused during normal working daytime hours. However, where daylighting interferes with aiming and focusing, the aiming shall be performed after sunset.
G. A portion of the lamps remaining after the final aiming will be turned over to the owner for stock; while the others shall be returned unopened to the contractor’s distributor for full credit to the Owner.

3.3 COORDINATION WITH AMBIENT CONDITIONS

A. The Contractor is responsible for coordinating the characteristics and the U.L. labeling of the luminaires and their components with the ambient conditions which will exist when the luminaires are installed. These areas of coordination include, but are not limited to, the following:

1. Wet location labels.
2. Damp location labels.
3. Low temperature ballasts.
4. Dimming ballasts.
5. Very low heat rise ballasts.
6. Plenums and air handling spaces.
7. Fire rated ceilings.
8. Low density ceiling.
9. Insulated ceilings.

PART 4 - LIGHT FIXTURE CUT SHEETS

END OF SECTION

This page is intentionally left blank.

SECTION 26 56 13 - POLES AND STANDARDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 Specification sections, apply to work of this section.

B. Division 26 Basic Electrical Materials and Methods sections apply to work specified in this section.

1.2 SUMMARY

A. The section includes not limited erecting, trenching and installation of poles and standards.

B. Applications of lighting poles and standards specified in this section include the following:

1. Automobile parking lots.
2. Pedestrian walkways.
3. Building entrances.

C. Related Sections: The following sections contain requirements that relate to this section:

1. Division 31 Section, “Earthwork” for excavation and backfilling of poles, standards, and foundations are specified in Division 2.
2. Division 3 Section, “Concrete” for embedding poles, and for pole foundations.
3. Wires/cables, raceways, and electrical boxes and fittings which are required in connection with electrical poles and standards are specified in Division 26.
4. Exterior lighting fixtures (luminaries) and brackets which are required in connection with electrical poles and standards are specified in another Division 26 section, “Lighting Fixtures”.

1.3 SUBMITTALS

Submit shop drawings, samples, and prototypes as specifically instructed herein and as follows:

A. Shop drawings shall include but not be limited to:

1. Submit fixture shop drawings in booklet form with a separate sheet for each fixture, assembled in “luminaire type” alphabetical or numerical order, with proposed fixture and accessories clearly indicated on each sheet.
2. Manufacturer’s dimensioned scale drawings showing in complete detail, the fabrication of all electrical pole standards, arms, and hardware including overall and detail dimensions, finishes, metal thickness, type, fabrication methods, support method, ballasts, hinges, gaskets, wind loading, wire/cable connections, and all other information to show compliance with the Contract Documents.

B. Samples

1. Partial pole standards samples may be requested for any or all of the fixtures specified.
2. Submit for approval samples called for by the Engineer when and where directed, and the components tagged with the name of the project. Samples will not be returned. Allow two weeks from the date of receipt for thorough examination and review by the Architect and Engineer.
3. All samples require a submission of material finish samples and component approval to be reviewed prior to shipment of any material to the project.
4. Electrical pole standards under the contract shall be identical with the approved sample. No portions or parts of the electrical pole standard used as a sample will be allowed to be installed on the project.
5. In the event the submissions are disapproved, the samples will be returned to the Contractor to immediately make a new submission of electrical pole standards meeting the contract requirements.
6. All costs associated for samples are to be paid by the Contractor. No additional cost to the owner for samples will be allowed.

C. Wiring Diagrams: Submit wiring diagrams for electrical poles and standards showing connections to electrical power panel feeders, switches, and controllers. Differentiate between portions of electrical wiring which are manufacturer-installed and portions which are field-installed.

D. Shop drawings and samples requested shall be submitted for approval before fabrication. Any material produced prior to the approval of shop drawings or samples, and not in conformance with the Contract Documents, shall be disapproved with the Contractor bearing full responsibility and cost.

E. No variation from the general arrangement and details indicated on the drawings shall be made on the shop drawings unless required to suit the actual conditions on the premises, and then only with the written acceptance of the Architect. All variations must be clearly marked as such on the drawings submitted for approval.

F. Manufacturers not listed must be pre-qualified prior to bid. For approval of all electrical pole standards substitutions, the fabricator shall comply to specifications herein and as outlined below:

1. Manufacturer shall have not less than 5 years experience in design and manufacture of pole standards on the type and quality shown. Pre-qualification submissions must include a list of completed projects and dated catalogue pages and drawings indicating length of experience.
2. Manufacturer shall also submit a partial prototype sample of each pole standard for review by the Architect and Engineer. Prototype samples shall be sufficiently detailed to allow evaluation of compliance with the salient features of the specification. Preliminary design or shop drawings shall not be accepted in place of prototype samples.
3. Printed physical, electrical and technical data clearly highlighted to show the differences between the proposed substitutions and the specified electrical pole standards.
4. The Architect and Engineer shall determine whether the prototype sample complies with the specifications and shall reserve the right to disqualify any bidders.

1.4 QUALITY ASSURANCE

A. Manufacturer's Qualifications: Firms regularly engaged in manufacture of electrical poles and standards of types and sizes required, whose products have been satisfactorily used in similar service for not less than 5 years.

B. Installer's Qualifications: Firms with at least 5 years of successful installation experience with projects utilizing electrical pole and standard work similar to that required for this project.

C. Codes and Standards:

1. Electrical Code Compliance: Comply with applicable local code requirement of the authority having jurisdiction and NEC Articles 220, 225, 250, 410, and 501 as applicable to installation, and construction of electrical poles and standards.
2. UL Compliance: Comply with UL standards, including UL 486A and 486B, pertaining to electrical poles and standards. Provide lighting components and fittings which are UL-listed and labeled.
3. ANSI/ASTM Compliance: Comply with applicable requirements of ANSI C 2, "National Electrical Safety Code", pertaining to construction and installation of lighting poles and standards.
4. AASHTO Compliance: Comply with applicable requirements of American Association of State Highway and Transportation Officials Standard LTS-1; "Standard Specifications for Structural Supports for Highway Signs, Luminaries and Traffic Signals".
5. NEMA Compliance: Comply with NEMA Standards Pub/No's. LE 2 and TT 1 pertaining to electrical pole and standard units, materials, and installation.
6. IES Compliance: Comply with applicable requirements of IES RP-8, "Roadway Lighting", and RP-20, "Parking Facilities Lighting".

1.5 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Deliver electrical pole and standard products, and fittings in factory-fabricated containers or wrapping, which properly protect products from damage.

B. Store electrical pole and standard products and fittings in original cartons in well-ventilated space protected from moisture, construction traffic and debris.

C. Handle electrical pole and standard products carefully to prevent breakage, denting and scoring finish. Do not install damaged units or components; replace with new.

1.6 SEQUENCING AND SCHEDULING

A. Coordinate with other electrical work including wires/cables, electrical boxes and fittings, and raceways, to properly interface installation of electrical pole and standard work with other work.

B. Sequence electrical pole and standard installation work with other work to minimize possibility of damage and soiling during remainder of construction period.

PART 2 - PRODUCTS

2.1 ELECTRICAL POLE STANDARDS

A. Metal Lighting Standards: Provide metal, raceway-type, lighting poles and standards, of sizes and types shown on schedules, comprised of shafts and tenon joints. Equip with grounding connections readily accessible from handhole or transformer base access doors; and constructed of the following materials and additional construction features:

1. Material: Cast aluminum for pedestrian scale poles, unless otherwise noted. Steel poles for parking lots and roadways, unless otherwise noted.
2. Configuration: Anchor base type with hand hole and cover where indicated.
3. Configuration: Transformer base type with access door and cover.
4. Metal Lighting Standard Accessories: Provide accessories for metal lighting standards, including anchor bolts, anchor bolt cover, as recommended by lighting standard manufacturer, of sizes and materials needed to meet erection and loading application requirements.

B. Pole base shall be designed by a professional structural engineer licensed in the state of Maryland who is hired by the contractor / manufacturer to ensure pole base meets AASHTO requirements for the geographical project location.

C. Provide vibration dampener field or factory installed. Dampener shall be serpentine type, chain type are not permitted. Dampener shall be provided for the following types of poles:

1. Round Poles.
2. Square Poles.
3. Tapered Poles over 25 feet.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions under which pole standard, equipment and components are to be installed, and substrate which will support equipment. Notify Engineer in writing of conditions detrimental to proper completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF ROADWAY AND PARKING AREA LIGHTING

A. Install pole and standard units and products in accordance with manufacturer’s written instructions, applicable requirements of NEC, NESC and NEMA standards, and with recognized industry practices to ensure that roadway and parking area lighting equipment fulfill requirements.

B. Utilize belt slings or rope (not chain or cable) to protect finishes when raising and setting finished poles and standards.

C. Set poles and standards plumb. Support adequately during backfilling, or when anchoring them to the foundations.

D. Provide sufficient space encompassing hand access and cable entrance holes for installation of underground cabling and conduit.

E. Fasten electrical lighting fixtures and brackets securely to structural supports, including poles/standards; and ensure that installed fixtures are plum and level.

F. Tighten connectors and terminals, including screws and bolts, in accordance with equipment manufacturer's published torque tightening values for equipment connectors. Where manufacturer's torquing requirements are not indicated, tighten connectors and terminals to comply with tightening torques specified in UL Standards 486A and 486B, and the National Electrical Code.

3.3 GROUNDING

A. Provide equipment grounding connections for poles and standards. Provide a ¾" x 10' copper rod at each pedestrian, parking lot and street lighting pole. Connect to a #6 bare copper ground wire. Tighten connections to comply with tightening torques specified in UL 486A to assure permanent and effective grounding.

END OF SECTION

This page is intentionally left blank.

SECTION 26 90 00 - PROJECT CLOSEOUT

PART 1 - GENERAL

1.1 WORK INCLUDED

A. The contractor shall summarize and document adherence with the requirements of the specifications for project closeout including:

1. Copies of all warranties
2. Operation & Maintenance Manuals
3. Required tests
4. Certifications
5. Record drawings
6. Permit requirements

B. The contractor shall compile a closeout manual which shall include:

1. A list of all required tests and a place for signoff of date completed.
2. A list of all submittals with dates of acceptance by the engineer.
3. A schedule indicating dates for beginning testing and startup of equipment and dates of tests to be witnessed by the engineer, or designated representative, as required by the specifications.
4. Test procedures to be used for life safety systems.
5. Project close out check list.

C. The final closeout manual shall include the following:

1. Test reports as required by the specifications with signoff by the appropriate individual (engineer, architect, building official, etc.).
2. Documentation indicating all equipment is operating properly and is fully accessible for maintenance.
3. Copies of all warranties.

D. This section only includes the requirements for documentation of the contract documents, by the contractor, for project completion. This section does not in any way decrease the scope of any of the drawings or specifications.

1.2 SUBMITTALS

A. Within 90 days after notice to proceed submit a preliminary closeout manual with the following:

1. A list of all required tests.
2. Preliminary schedule showing major milestones for completion of the electrical and technology systems.

B. Within 30 days of the first major milestone submit the completed closeout manual as described in Part 1.

C. Within 2 weeks of substantial completion submit a completed “Project Closeout Check List”, and the Final Closeout Manual.

D. Listed below is a checklist for use by the contractor. This list is not all inclusive for this project.

Project Close-Out Summary - Electrical

- ☐ The following tests have been completed. Submit test report for record.
  - ☐ Feeder Testing and Reporting (Megger Result)
  - ☐ Transformers Testing and Reporting
  - ☐ Grounding System Testing and Reporting
  - ☐ Generator Testing and Reporting
  - ☐ Infrared Scans, Testing and Reporting
- ☐ All main components of the electrical system cleaned and vacuumed. This includes unit substations, switchboards, distribution boards, panel boards, etc. Provide ME Engineers with schedule when this is going to occur and a letter stating it has been completed.
- ☐ The contractor shall schedule a walk through with the engineer to inspect all feeder sizes. Covers for panel boards and distribution boards should be removed by the contractor for visual inspection of feeder sizes.
- ☐ Temporary cable tray hooks inspected.
- ☐ The fire alarm system manufacturer shall provide the Owner/Architect with a “Letter of Certification” indicating the system is fully functional and meets all manufacturers requirements as well as code and design requirements. Fire department must sign off the system.
- ☐ Provide spare fuses and fuse cabinets ((1) in each switch gear room) per specifications.
- ☐ Panelboard directories completed with typed print outs.
- ☐ Record drawings submitted.
- ☐ All lighting control systems complete with controls fully operational for visual inspections.
- ☐ Adjustable Lighting fixtures have been aimed with design team per specification 26 51 00.
- ☐ The lightning protection system manufacturer shall provide the Owner/Architect with a “Letter of Certification” indicating the system meets all manufacturers requirements as well as code and design requirements.

PART 2 - PRODUCTS – NOT USED

PART 3 - EXECUTION

3.1 EQUIPMENT STARTUP AND TESTING

A. Prior to completion and punch list by the engineer, the contractor shall startup and test each piece of equipment as required by the specifications. The contractor shall provide documentation of all required tests with signoff of by the appropriate individual (engineer, architect, and building official).

3.2 LIFE SAFETY SYSTEMS

A. All life safety systems shall be fully and successfully tested by the contractor before being witnessed by the engineer or building official.

B. The contractor shall provide a detailed test procedure, with instrumentation to be used, for approval by the engineer and building official prior to any testing.

C. Once tested by the contractor and fully operation the systems shall be demonstrated to the engineer. Once accepted by the engineer the system shall be demonstrated to the building and fire officials.

3.3 COORDINATION WITH OTHERS

A. The Division 26 contractor shall coordinate their requirements with the general contractor to ensure the other building systems are completed to the point that they will not adversely affect the operation of any systems.

3.4 PUNCH LISTS

A. The contractor shall submit in writing that the project is ready for final review by the engineer.

B. Once the project is ready for final review the engineer will create a punch list of any corrections or deficiencies.

C. The contractor shall complete all punch list items and provide a letter to the architect after completion stating all items have been completed or reasons why they were not completed.

D. Upon receipt of this letter the engineer will verify that the punch list has been satisfactorily completed.

END OF SECTION

This page is intentionally left blank.

SECTION 27 05 00 - COMMON WORK RESULTS FOR COMMUNICATIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Product Appendix: Refer to Appendix 1, Equipment Schedules at the end of each specification section for specific product information on the benchmark products. These equipment schedules should be the baseline for product data submittals but are not intended to be an all-encompassing bill of materials, unless noted otherwise.

B. Part 1 and Part 3 of this specification applies to all Division 27 specification sections.

C. General provisions of Contract, including General and Supplementary Conditions and Division 1 Specification sections.

D. Architectural, Electrical, and Technology Drawings. Other systems drawings may apply.

E. Division 26 Specifications. Coordinate Electrical System requirements. Basic Electrical Materials and Methods sections apply to work of this section.

F. Division 27 Specifications. Provide requirements in all corresponding Division 27 Communications Specifications.

G. Division 28 Specifications. Coordinate Security System requirements.

H. Vertical Transportation (Elevators, Escalators, etc.) Specifications and/or Codes Requirements.

I. Rough carpentry is specified in a Division 6 section.

1.2 SUMMARY

A. Project Expectations: Within two weeks after award of contract, the Contractor shall arrange a “CA kickoff” meeting and/or conference call with the General Contractor, Construction Manager, Architect, Engineer, and Owner (when applicable) to discuss general project expectations.

B. The term, “provide” used throughout this specification and drawings shall mean “furnish, install, test, and certify”.

C. Coordinate project schedule, installation schedule, phasing and any other requirements deemed necessary with Construction Manager and/or General Contractor and all necessary trades to ensure successful completion of work.

D. Phasing, temporary distribution/equipment, cut-over and implementation shall be coordinated with Owner, Construction Manager and/or General Contractor, Architect, and Engineer.

E. Extent of communications infrastructure work is indicated by Division 27 specifications and Technology drawings and schedules and is hereby defined to include, but not by way of limitation, the provisions of:

1. Raceway systems including but not limited to conduits, cable trays, sleeves, surface raceways, telecommunication services entrance, manholes, hand holes, pull-boxes, junction boxes, back-boxes, etc. as required and specified in Division 27 sections and/or select Division 26 sections. The Construction Manager and/or General Contractor shall coordinate this with the Sub-Contractor performing work and determine how scope of work is assigned. The purpose of this specification is to establish design intent and general system scope.
2. All communications infrastructure shall be provided as part of the Base Building Project including but not limited to raceway, cable, cable terminals, and comm room fit-out.
3. Backbone cables between the Main Cross-connect (MC) and each Intermediate Cross-connect (IC) or Remote Hub location. Refer to Technology Drawings (one-lines and floor plans) for specific locations and sizes.
4. Horizontal or station cables between each communication device outlet and the nearest Intermediate Cross-connect (IC) or remote hub location.
5. Backbone and horizontal cable termination and terminals including but not limited to wiring panels/blocks, patch panels, fiber optic terminals and panels, and outlets/jacks.
6. Patch cords, jumper cables, and cross-connect cables (unless specifically excluded in 27 13 13, 27 13 23, or 27 15 00) to interconnect wiring terminals as well as electronic equipment.
7. Communication room hardware and component fit-out including cabinets, racks, cable tray, backboard, and raceways for terminating cable and installation of electronic equipment.
8. Power distribution within equipment racks and cabinets including power strips (unless specifically excluded in 27 11 00).
9. Grounding and bonding of all metallic hardware components to the nearest telecommunications grounding bus (TGB) bar including but not limited to equipment racks, cabinets, cable trays, ladder rack, metallic cable sheaths, wall mounted wiring terminals, conduits, sleeves, metallic ductwork, and frames.
10. All physical cable management hardware including, but not limited to: “J-hooks” in accessible ceiling areas, “D-rings” on backboards, vertical and horizontal managers on racks and cabinets, vertical and horizontal ladder-type or wire basket cable tray within communication rooms, etc.
11. Fire stopping as required. Contractor shall provide fire stopping for all low-voltage openings (including empty low voltage raceway) once cable installation is complete. Contractor shall confirm specific fire stopping scope requirements with General Contractor and/or Construction Manager and shall verify that fire stopping materials and installation are in compliance with all applicable codes and listing requirements.
12. Seismic bracing of all equipment cabinets, equipment racks and ladder-type or wire basket cable tray as required by code and by local governing jurisdiction.
13. Testing of all communications cable infrastructure and grounding systems as noted by specification, drawings, and applicable industry standards.
14. Labeling of all communication infrastructure components, hardware, cable, and terminations with mechanically printed labels.
15. Preparation and submission of product data, shop drawings, testing reports, as-built drawings, and cabling documentation as required in this specification.
16. Construction and Installation warranties.
17. Manufacturer components, channel and solutions warranties.
18. Installation and testing of all system and components.
19. Onsite administrative and user training.
20. Manufacturer training of components.

F. Any discovered unsafe or noncompliant conditions of a proposed designated space shall be brought to the attention of JIS immediately and reconciled.

1.3 SUBMITTALS

A. General Description and Requirements

1. Refer to Product Data and Shop Drawing Submission Checklist (appendix) at the end of this specification section for additional requirements specific to each Division 27 section.
2. Contractor shall not submit product data for review without submitting corresponding shop drawings as part of the same submittal package. Partial submittals will be returned as “revise and resubmit”.
3. Submittal Schedule:

    a. Within 2-4 weeks after award of contract, the Contractor shall submit a proposed schedule for submitting product data and shop drawings. At a minimum, the following items shall be included:

        1) Submittal date for Compliance Matrix.
        2) Submittal date for Construction Schedule.
        3) Submittal date for Product Data and Shop Drawings.
        4) Submittal date for Commissioning and/or Test Results.
        5) Submittal date for As-Builts.

    b. Within 45 days after award of contract or as dictated by the construction schedule (whichever period of time is shorter), the Contractor shall submit prefabrication submittals consisting of product data and shop drawings for approval. Partial submittals will not be accepted without prior written approval from the Architect.

4. In addition to the requirements noted herein, refer to Division 1 Specification for additional requirements. As a minimum, Contractor shall ensure all requirements listed here are met.
5. Review of the Prefabrication Submittals by the Architect and Engineer is for purposes of tracking the work and contract administration and does not relieve the Contractor of responsibility for any deviation from the Contract Documents, or from providing equipment and/or services required by the Contract Documents which were omitted from the prefabrication submittals.
6. No portion of the project shall commence, nor shall any equipment be procured, until the prefabrication submittals (including product data and shop drawings) have been approved in writing by the Architect. All installations shall be in accordance with the Contract Documents.
7. A detailed completion schedule shall be submitted with the prefabrication submittals.
8. Prefabrication submittals shall be accompanied by a letter of transmittal identifying the name of the project, Contractor's name, date submitted for review, and a list of items transmitted.

B. Compliance Matrix:

1. Compliance Matrix: Provide a specification compliance matrix indicating compliance or deviation for each item in each and every Division 27 specification section. Refer to the SPECIFICATION RESPONSE section within this specification and Appendix 2 for additional requirements.

    a. General Notice: Provide a general notice for acceptance of all sections within this specification.
    b. Exceptions: Provide all exception to the specification listing:

        1) Specifications section reference
        2) Statement of exception
        3) Explanation of exception

    c. If the Contractor has no exception to the specifications, then provide a "No Exception Taken" statement.

C. Product Data:

1. Warranty Information: Provide all warranty information as described in this specification section for review and approval.
2. Component List: Provide complete submittal component list (i.e., parts table of contents) at the beginning of the submittal package for each specification section. Component list and manufacturer cut-sheets shall be compiled to match the order of Appendix 1 within each Division 27 section. Component list shall include and clearly identify the following for each part:

    a. Component name / description
    b. Manufacturer
    c. Specific product number (to clearly indicate special options, colors, etc.)

3. Cut-Sheets: Submit manufacturer's cut-sheets for all components listed within each specification section and corresponding appendix or required for a complete installation as specified. Cut sheets shall include and clearly identify the following for each part:

    a. Component name / description
    b. Manufacturer
    c. Specific product number highlighted in color to distinguish specific product/part numbers, options, colors, accessories, etc.
    d. Do not submit manufacturer's documentation or cut sheets for components that are not required for specified installation.

4. Product Substitutions: These specifications are intended to be performance based, except where specifically noted otherwise. Thus, all products listed in each respective Appendix 1: Equipment Schedules are "benchmark" products. The Contractor shall include products from one of the "pre-approved" manufacturers as noted in the Appendix. The Contractor may submit (as a proposed alternate solution) substitute manufacturers and models that may be more cost effective or readily available. All substitutions shall meet or exceed the minimum functional, physical, and technical specifications. Acceptance of such substitutions is at the discretion of the Owner, Architect, and Engineer. Additionally, the requirements of Division 1 Specifications shall apply and may supersede requirements noted herein.

D. Prefabrication Shop Drawings: (Refer to Appendix-3 for additional requirements)

1. General: All shop drawings shall be provided on contractor specific title block. Contractor may use Technology Drawing files as a “starting point” for shop drawings but additional information shall be added and/or updated as noted below.
2. Symbol Legend, Abbreviations, and Description: Drawings shall include the following:

    a. General project information, contractor company name, etc.
    b. Descriptions of all abbreviations and symbols
    c. Typical device mounting heights
    d. General notes and/or scope description, exclusions, etc.

3. One-Line Wiring Diagrams: Provide backbone raceway one-line, backbone and horizontal cabling, copper pair and fiber strand counts, cable quantities, splice enclosures, etc. Include conduit allocation and fill ratios for all conduits on the raceway one-line diagram.
4. Site Plan: Provide complete site and exterior plans indicating all site and building façade mounted communication device outlets, equipment, and components proposed to be installed. Additionally, manholes, hand holes, pull-boxes, and all major raceway routing shall be indicated for conduits 2-inches and larger. Shop drawings shall represent final conduit routing and manhole, hand hole and/or pull-box placement as coordinated and/or confirmed with Service Provider, Civil Engineer, and other trades.
5. Floor Plans:

    a. Floor plans shall indicate all communication device outlets, equipment, and components proposed to be installed.
    b. Floor plans shall indicate cable routing origin and labeling scheme for each cable and termination position.
    c. Refer to Division 26 “Wiring Devices” specification for additional requirements for floor boxes.
    d. Raceway routing shall be indicated for all in-slab conduits, cable trays and overhead conduits 2-inches and larger, based on final coordination with all other trades. Shop drawings shall clearly indicate areas with cable tray clearance limitations and/or other cable access limitations for review and approval by Owner, Architect, and Engineer.

6. Enlarged Plans:

    a. Provide 1/4” = 1’-0” enlarged plans of all communication rooms (as applicable) indicating the position of equipment cabinets and/or racks, wiring terminals, patch panels, grounding equipment, cable tray, fiber and copper terminations, and other low voltage systems equipment layout within the rooms.
    b. Shop drawings shall clearly indicate final conduit/riser (core drill and/or block-out) locations and sizes as coordinated and/or confirmed with Structural Engineer and any field conditions that impact proposed location.
    c. Shop drawings shall clearly indicate areas where equipment clearances may be limited, for review and approval by Owner, Architect, and Engineer.

7. Details: Document method of attachment of racks to the floor and ladder tray systems, method of attachment of wall mounted distribution frames, grounding details indicating grounding method for cabinets, racks, cable tray, cable management, and power details for rack mounted power distribution.

8. Elevations:

    a. Rack elevations (produced in Visio, ACAD, or similar) indicating exact placement of patch panels, fiber terminals and enclosures, vertical and horizontal cable managers, rack mounted power strips or distribution units, empty rack-units, etc.
    b. Wall elevations shall detail any and all known components to be mounted on the walls, whether those items are provided by Contractor producing shop drawings or not. Components shall include, but not be limited to, electrical and/or fire alarm panels, security panels, distributed antenna system (DAS), CATV, communication infrastructure distribution frames with block size, cable routing, cable management, pair counts, method of attachment, etc.

9. Drawing Scale: Shop drawings shall be drawn to scale and completely dimensioned as to clearly show construction detail.
10. Labeling: Provide documentation of all labeling schemes for conduit, back-boxes, cables, outlets, wiring blocks and/or patch panels, device faceplates, etc.
11. Documentation: Provide submittals and documentation as required by the project manual (in addition to electronic copies) for review or as indicated in Division 1 general conditions.

E. Record As-Built Drawings:

1. All record as-built drawings shall be provided on contractor specific title block. Contractor may use Technology Drawing files and/or shop drawings as a “starting point” for as-built drawings. As-built drawings shall comply with shop drawing requirements above but shall be updated to align with actual installation. Additionally, area plan drawings shall indicate all device labeling including, but not limited to, data port labels.
2. As-built files shall be a part of the final punch list and final deliverable. The project is not regarded as complete until JIS does a final walk thru, receives the final test results and as -built files.

1.4 QUALITY ASSURANCE

A. Codes and Standards: All materials and installations shall comply with current version of applicable codes and standards, including but not limited to:

1. TIA-526: Standard Test Procedures for Fiber Optic Systems.
2. TIA-568-C.0: Generic Communications Cabling for Customer Premises.
3. TIA-568-C.1: Commercial Building Communications Cabling Standards, Part 1: General Requirements.
4. TIA-568-C.2: Balanced Twisted-Pair Communications Cabling and Components Standard.
5. TIA-568-C.3: Optical Fiber Cabling Components Standard.
6. TIA-569: Commercial Building Standard for Telecommunications Pathways and Spaces.
7. TIA/EIA-604: Fiber Optic Connector Intermate2705ability Standards (FOCIS).
8. TIA-606: Administrative Standard for Commercial Telecommunications.
9. ANSI/J-STD-607-A: Commercial Building Grounding and Bonding Requirements for Communications.
10. TIA-758-A: Customer-Owned Outside Plant Communications Cabling Standard.
11. TIA-942: Telecommunications Infrastructure Standard for Data Centers.
12. ASTM: American Society for Testing and Materials
13. BICSI CO-OSP Design Manual (current edition): Customer-Owned Outside-Plant Design Manual.
14. BICSI Electronic Safety and Security (ESS) Design Reference Manual (current edition).

15. BICSI Network Design Reference Manual (current edition).
16. BICSI TDM Telecommunications Distribution Methods Manual (current edition).
17. BICSI Wireless Design Reference Manual (current).
18. TIA TSB67: Transmission Performance Specifications for Field Testing of Unshielded Twisted-Pair Cabling.
19. ICEA: Insulated Cable Engineers Association
20. IEEE-802.11 a, b, g, n: Wireless Local Area Networks
21. IEEE-802.3: 10Mb/s, 100Mb/s, 1Gb/s, and 10Gb/s Ethernet Standards as applicable based on media types (twisted pair copper, fiber optics, etc.)
22. IEEE-802.3ak: 10Gb/s Ethernet (evolving copper standard).
23. IEEE-802.3af: Power-over-Ethernet (PoE).
24. IEEE-1100-1999: Recommended Practice for Powering and Grounding Sensitive Electronic Equipment.
25. IEEE-241: Recommended Practice for Electric Power Systems in Commercial Buildings.
26. ISO/IEC 11801: International Standard on Information Technology – Generic Cabling of Customer Premises.
27. NESC: National Electrical Safety Code
28. NEMA Stds Pub No. VE 1, Cable Tray Systems. Additionally, comply with current edition of NEC, as applicable to construction and installation of cable tray systems.
29. NEMA Std 250: Enclosures for Electrical Equipment (1000 Volts Maximum).
30. NFPA-70/NEC: National Electrical Code.
31. NFPA-72: National Fire Alarm and Signaling Code
32. UL Compliance: Provide products which are UL-listed and labeled.
33. USDA Bulletin 1751F-643: Underground Plant Design.
34. Maryland Court of Appeals Judiciary Information Systems (JIS) and Department of General Services (DGS) Standards as Applicable

B. Manufacturer and Product Qualifications

1. Provide products from manufacturers regularly engaged in the production of communications infrastructure components, including but not limited to, raceway, horizontal copper cabling, copper and fiber optic backbone cabling, and connecting hardware.
2. Provide products from manufacturers whose products of similar types, capacities, and characteristics have been in satisfactory use in similar type projects for not less than five years.

C. Contractor Qualifications:

1. Firms with at least seven (7) years of successful installation experience with projects utilizing communications structured cabling, media systems, infrastructure, raceway and equipment similar to that required for this project.
2. The company shall have a fully staffed office with technical installations support personnel within 30 miles of the project. (Exceptions to this shall be confirmed through approval by the Owner, Architect, Contractor, and Engineer.)
3. The Low Voltage Raceway Contractor shall be a certified installer (current and in good standing with proven history) of the selected manufacturer’s raceway systems and shall provide a 25-year warranty on installation and applications.
4. The Low Voltage Cabling Contractor shall be a certified installer (current and in good standing with proven history) of the selected manufacturer’s structured cabling systems, and shall provide a 25-year warranty on structured cabling installation and applications.
5. The company shall have a BICSI RCDD on staff.

D. All materials shall be Underwriters Laboratories (UL) or Intertek Testing Services (ETL) Listed unless otherwise indicated.

E. Coordinate with local communications service provider(s) for primary and diverse service to Telecommunications Demarcation location(s) within the facility.

F. Coordinate with electrical work and other trades to properly interface installation of telephone system with other work.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver equipment and components in factory-fabricated containers or wrappings, which properly protect equipment from damage.

B. Store equipment and components in original packaging. Store inside in a well-ventilated space protected from weather, moisture, soiling, humidity, and extreme temperatures.

C. Handle equipment and components carefully to prevent damage. Do not install damaged units or components; replace with new.

1.6 SEQUENCING AND SCHEDULING

A. All work shall be reviewed and coordinated with the Construction Manager and/or General Contractor prior to commencing.

B. Communication systems, infrastructure, raceway and equipment are sensitive to environmental conditions including but not limited to temperature, dirt, dust, and water. The contractor shall ensure the storage and installation of all communication components are sequenced and scheduled accordingly to prevent any damage, loss of performance, and warranty void of such systems. All mis-installed components shall be replaced with new parts and re-installed at the Contractor’s expense.

C. Coordinate installation with Structural, Electrical, HVAC, Plumbing, Fire Protection, and other trades to eliminate disruption and/or conflict with other systems.

D. Coordinate underground installation with Civil, Structural, Electrical, and other trades to eliminate disruption and/or conflict with other systems (paving, curb and gutter, etc.).

E. Sequence installation of communications systems and infrastructure with other work to minimize possibility of damage and soiling during remainder of construction.

1.7 PROJECT SITE CONDITIONS

A. Prior to submitting a proposal, the Contractor shall inspect the Contract Documents, and shall become fully informed as to laws, ordinances, and regulations affecting the project. The Contractor shall immediately bring to the Owner, Architect, and Engineer’s attention, in writing, any existing condition or statute that contradicts, is in conflict with, or negates the Contract Documents. Failure of the Contractor to become fully informed as to all above mentioned items shall in no way relieve the Contractor from any obligations with respect to their proposal.

B. The Technology Drawings depict equipment locations, backboxes, conduit runs, cabling, etc. in a schematic manner. Field conditions and coordination with related trades may warrant relocations of field devices. No additional compensation will be allowed due to these revisions.

1.8 WARRANTY

A. The manufacturer shall provide a warranty with a minimum term of 25-years for structured cabling and all communications cable infrastructure components. This warranty shall cover all components including cables, jacks, patch panels, and wiring panels, etc. to maintain the specified performance, physical criteria, and applications assurance. Any such components, link, or channel shall be replaced by the Manufacturer at no cost to Owner during this period. The Contractor and Manufacturer shall submit all information and documentation on Warranty.

B. A one (1) year warranty on the Work shall be provided by the Contractor. If, within one (1) year after the date of final acceptance of the installation or within such longer period of time as may be prescribed by law or by the terms of any applicable special warranty required by the Contract Documents or provided by a manufacturer, any of the work or equipment is found to be defective or not in accordance with the Contract Documents, the Contractor shall correct it promptly including all parts and labor after receipt of notice from the Owner to do so unless the Owner has previously given the Contractor a written acceptance of such condition. This obligation shall survive termination of the contract. The Owner shall give such notice promptly after discovery of the condition. Such notice shall be provided by Owner representatives, to be identified, either verbally or in writing.

C. Nothing contained in the Contract Documents shall be construed to establish a shorter period of limitation with respect to any other obligation which the Contractor might have under the Contract Documents or any manufacturer's warranty. The establishment of the time period noted above, after the date of final acceptance or such longer period of time as may be prescribed by law or by the terms of any warranty required by the Contract Documents, relates only to the specific obligation of the Contractor to correct the work or equipment, and has no relationship to the time within which his obligation to comply with the Contract Documents may be sought to be enforced, nor to the time within which proceedings may be commenced to establish the Contractor's liability with respect to his obligations other than specifically to correct the work or equipment.

D. If system operation is not fully restored during the warranty period within two (2) business days, the Owner reserves the right to require the Contractor to provide on-site manufacturer's service technicians at no additional cost.

E. The Owner reserves the right to expand or add to the system during the warranty period using firm(s) other than the Contractor for such expansion without affecting the Contractor's responsibilities, provided that the expansion is done by a firm which is an authorized dealer or agent for the equipment of system being expanded.

1.9 SPECIFICATION RESPONSE

A. Pricing

1. Instructions to Bidders

a. The following is a partial list of instructions. Bidders are responsible to provide a complete proposal inclusive of all information requested in the Contract Documents.
b. Do not assume anything. Clarify your position in writing with your bid concerning any areas that may not be clear to you.
c. Copies of the bid proposal shall be submitted to the Owner, Architect, and Engineer for review and approval.

d. Bidders shall prepare equipment lists showing each item included in the bid. Equipment Lists must include the quantity, model number, manufacturer and price of each item listed under the generic description.
e. Provide a detailed description of any and all voluntary alternates and include cost changes in the Voluntary Alternate Bid forms. Bidders should submit voluntary alternates that will either provide for a better system or reduce costs without degrading the system. This includes alternate manufacturer and product substitution.
f. In the instance where the Drawings and the Specifications do not directly coincide, or coincide individually, the item of better quality, greater quantity and/or higher cost shall be included in the base bid.

2. Unit Pricing and Labor Rates

a. Unit prices and labor rates submitted with the bid proposal shall be used for all additions, deductions, and alterations of the original contract up to the date of submittal review of product data and shop drawings.

B. Compliance

1. Bidders shall submit a Statement of Qualifications with their bid proposal that shall include the following information:

a. Company name, address, telephone number and contact person.
b. Brief company history.
c. Resumes of key personnel.
d. Local staffing description (job descriptions and numbers of persons in each position).
e. Local service capabilities (hours of operation and parts availability).
f. Technician factory certifications.
g. Description of local engineering and project management capabilities.
h. Line sheet listing major suppliers of security equipment.
i. Annual dollar value of sales, installation and service of each product line carried.
j. List of references describing three (3) completed projects of similar size and complexity, including names and telephone numbers of the contact persons.
k. List of references describing similar projects completed in the area including names and telephone number of the customer's contact person.
l. List of similar projects currently under construction in the area including names and telephone numbers of the customer's contact person.
m. Licensing information.

2. Provide a specification COMPLIANCE MATRIX indicating compliance or deviation for each item in the specification. The matrix shall be comprised of a list of all numbered paragraphs that appear in this Specification. This matrix is critical for submittal review. See example Compliance Matrix template in Appendix 2.
3. Additionally, as described in this Specification, bidders shall submit the following information with their bid proposal:

a. Manufacturer's literature sheets for all standard manufactured items included in the equipment list and as proposed in the Voluntary Alternate Bid form, if applicable.
b. Workload and capability statements. The statements shall detail projects that will be active during the completion of this project, and the manpower that would be available for this project.

c. Confidentiality and return statements. The statements shall guarantee that the Contract Documents shall not be copied or distributed physically or verbally. The Contractor shall also assure the Owner that the Contract Documents shall be returned in their entirety upon request. The successful Contractor will be provided with as many copies as requested.
d. Copy of manufacturer's certification certificate.

4. Certain paragraphs of the Specification require the Bidder to provide information (possibly not listed above) in the proposal to demonstrate compliance with a requirement. If the Bidder fails to provide detailed responses to these items, the proposal will be deemed to be non-compliant to the paragraphs stated.
5. Number all pages of the bid submittal.

1.10 DEFINITIONS

A. Acronyms and Definitions

1. Refer to Technology Symbol Legend and Abbreviations shown on drawings.

PART 2 - SPECIFICATIONS

2.1 GENERAL REQUIREMENTS

A. Refer to each of the specification sections listed below for requirements:

1. 27 05 26: Telecommunications Grounding and Bonding
2. 27 05 33: Telecommunications Raceway and Boxes
3. 27 05 36: Cable Trays
4. 27 11 00: Communications Equipment Room Fit-out
5. 27 13 13: Communications Copper Backbone Cabling
6. 27 13 23: Communications Optical Fiber Backbone Cabling
7. 27 15 00: Communications Horizontal Cabling
8. 27 41 00: Audio Visual Systems
9. 27 53 20: Distributed Antenna System (DAS)

PART 3 - EXECUTION

3.1 INSTALLATION REQUIREMENTS

A. General:

1. The Contractor shall comply with all project expectations and submittal requirements as indicated in Part 1 of this specification. This includes initiating a "CA kickoff" meeting to discuss general project expectations with the project team.
2. Examine areas and conditions under which communications systems and infrastructure are to be installed. Notify Owner, Architect, and Engineer in writing of conditions detrimental to proper completion of the work. Do not proceed with work until unsatisfactory conditions have been corrected in a manner acceptable to installer.
3. The Contractor shall be knowledgeable of work to be performed by other trades and take necessary steps to integrate and coordinate their work with other trades.

4. The Contractor is required to coordinate their efforts with the other trades and sub-contractor who may be working within the same vicinity to avoid conflict and lost time.
5. The Contractor shall be responsible for furnishing all materials indicated on the drawings or as specified herein for a complete communications system.
6. The Contractor shall supply all necessary tools, equipment, accessories, safety equipment, protective clothing, etc., as customary for the craft and necessary for the installation.
7. All communications infrastructure shall be installed in an aesthetically pleasing fashion. All surface raceway in new buildings must be approved by the Owner, Architect, and/or Engineer.
8. All communications infrastructure shall be installed for optimal performance.
9. All communications infrastructure shall be installed to allow for convenient operation, testing, and easy adds, moves, and other changes in the future.
10. All components noted in Technology drawings and specifications shall be provided and completely setup and installed.
11. The Contractor shall verify space requirements and locations before starting cable installations and terminations. Inappropriate conditions shall be immediately reported to Construction Manager or General Contractor, Owner, Architect, and Engineer prior to initiating installation.
12. The contractor shall not install any component in a manner or condition that will void manufacturer and/or contractor warranty. Any such conditions that prevent an acceptable install shall be immediately reported to Construction Manager or General Contractor, Owner, Architect, and Engineer prior to initiating installation. All mis-installed components will be removed and replaced with new at the Contractors expense. No additional cost will be submitted to Owner.

B. Communications Room Fit-out:

1. Construction within communication rooms must be substantially complete before the installation of telecommunications cabling. This includes, but is not limited to, the installation of plywood backboard, cable tray or ladder rack, electrical outlets, light fixtures, sprinklers and ductwork. All walls shall also be painted before the installation of telecommunications cabling.
2. Communications rooms must be free from dust, dirt, and other foreign materials before the installation of any termination hardware or the termination of copper or fiber optic cables. The door to the telecommunication rooms must be installed and closed during termination.
3. Floor to floor distribution shall be provided with concrete floor sleeves or conduits as noted on the drawings, and as required by the architectural design.

C. Communications Raceway Infrastructure:

1. Contractor shall provide conduits through walls and across inaccessible ceiling spaces to ensure unobstructed pathway back to the nearest communications room or cable tray.
2. Provide protective cable bushings on all conduits immediately after installation.
3. Telecommunications conduits shall maintain large radius bends and sweeps. Use electrical 45º or 90º conduit elbows with long bend radii. Provided below are the ratios for minimum conduit bend radius to conduit size diameter:

    a. 6:1 bend radius of the inside conduit diameter for conduit sizes less than 2-inches.
    b. 10:1 bend radius of the inside conduit diameter for conduit sizes equal to or greater than 2-inches.

4. Telecommunications raceways shall have a maximum pulling length of 100 feet and a maximum 180º total sum of all elbows, sweeps and bends for each pulling length. The maximum bend for any location shall not exceed 90º and a maximum of two 90º bends or equivalent shall be allowed. Pull-boxes or junction-boxes shall be provided where necessary to comply with these requirements.
5. Pull boxes shall be provided in straight sections of conduit only. Pull boxes shall not be used to change pathway direction in any locations.
6. Conduit outlet bodies (i.e., condulet, C, LB, LL, LR, T), shall not be used as cable pull points or to change pathway direction in any locations. These devices are commonly used for electrical/power pathways and are not approved for low voltage cabling.
7. Provide expansion capability in conduit or raceway crossing building expansion joints. Reference architectural and structural drawings for expansion joint locations.
8. Fire-seal all raceway penetrations and openings to maintain fire rating after communications cables are installed.
9. All empty raceway systems shall have pull line or tape installed with three feet extending from each end, knotted and secured to remain in place.
10. Cable fill in riser conduits shall not exceed 40% cable fill.
11. Where applicable, the Contractor shall verify existing cable fill in riser conduit before installation of additional cables so as not to exceed 40% cable fill. Contractor is responsible for installation of additional riser conduit, where additional cables to be added will exceed the 40% cable fill.

D. Communications Cabling Infrastructure:

1. Contractor shall not paint cables and/or spray cables with fire proofing material as it can affect cable performance and will void the cable warranty.
2. All communications cable routed within communications rooms shall be bundled and combed to provide a neat and organized appearance. Cables shall be bundled using only manufacturer and industry approved Velcro wire ties (zip ties shall not be used) with tensions that do not deform and damage cable resulting in loss of transmission or performance. Any bundles and combing methods used shall not exceed manufacturer or industry standards recommendations for that cable type.
3. Contractor shall provide dedicated J-hooks at 48-inches on-center for all communications cabling not run within conduit or cable tray.
4. The contractor shall not install any cable in conduits that do not have the appropriate protect bushings on conduit ends. All mis-installed cable will be removed, bushings installed, and new cable re-installed at the Contractors expense. No additional cost will be submitted to Owner.
5. Cable bends shall not be greater than that recommended by the manufacturer of the cable.
6. Care shall be taken so as not to damage cable during the installation process and that manufacturer’s pull tension specification is not exceeded.
7. Provide a minimum 8’-0” and maximum 10’-0” of slack. Loop at the IC-rooms to be contained on the horizontal cable tray or ladder rack.
8. Provide a minimum of 3’-0” of slack for all device cable termination points. Slack shall be contained in accessible ceiling near the final termination point or in the cable tray nearby when continuous conduit is routed back to cable tray.
9. Communications cabling that is bundled within cable trays and supported from j-hooks shall be snugly wrapped using Velcro reusable cable ties as minimum of every 3’-0” for cable organization. Velcro ties shall be tightened so as not to deform cable jackets and thus affect cable performance. Plastic cable tie wraps shall not be used anywhere on the project.
10. Cables from different low voltage systems (ex. 70v Speaker, BMS, etc.) shall not be run in the same conduit pathways with horizontal or backbone UPT cabling, unless specifically noted on the drawings.

11. Any other Low Voltage scopes including but not limited to BMS, Fire Alarm, AV and Broadcast cabling that are run in common communications infrastructure shall comply with the installation requirements in the Division 27 specifications. The Contractor shall ensure that all scopes that use the installed infrastructure comply with these guidelines or provide dedicated pathways for those systems.

E. Electrical Clearances: Where telecommunications cabling is not fully enclosed in metallic conduit or solid metallic raceway, it shall be routed to maintain appropriate clearances from potential interfering electrical sources per NEC, TIA, and BICSI requirements. Provided below are minimum clearance requirements of key components that shall be maintained.

1. 120V Power Conduits: 6-inches (150mm)
2. 208V and Higher Power: 12-inches (300mm)
3. Lighting System: 12-inches (300mm)
4. Transformers: 48-inches (1200mm)
5. Motors and Fans: 48-inches (1200mm)
6. Other Interfering Sources to be field verified and coordinated by Contractor with Architect and Engineer.

3.2 LABELING

A. All communications components shall be clearly labeled using labeling devices (i.e., handwritten labels are not acceptable) with white label and black text. All labels shall be consistent font type and size (for respective components).

B. The following indicates the recommended labeling scheme for various components. The final labeling scheme shall be coordinated with the Owner, Architect, and Engineer prior to finalizing and initiating any work. A sample scheme shall be submitted for approval.

1. Backbone Cables (to TRs):

a. Label provided at both ends shall indicate origin room such as MTR (Main Telecom Room), the TR room designator (where cable is routed to) and a cable number if multiple cables are provided to a single TR location.

1) Example: “MTR-3A” = single cable from MTR to TR on level 3, riser A.
2) Example: “MTR-3A-2” = cable 2 of multiple cables from MTR to TR on level 3, riser A.

b. Where redundant backbone cables originate from a location other than the “MTR”, such as a Data Center or another TR, the redundant cables shall use the designator “DC” or the applicable TR designator.

1) Example: “DC-3A” = single cable from DC to TR on level 3, riser A.
2) Example: “3A-3D” = single cable between TR-3A and TR-3D.

2. Backbone Cables (to Remote Hubs):

a. Label provided at both ends shall indicate point of origin (i.e., MTR or TR designator), enclosure designator (where cable is routed to) and a cable number if multiple cables are provided to a single TR location.

b. Enclosure boxes shall be indicated by an “E” followed by a number for the enclosure.

1) Example: “MTR-E1” = single cable from TR to enclosure box “1”.
2) Example: “3A-E4” = single cable from TR-3A to enclosure box “4”.

c. AV Rooms (or other miscellaneous rooms) with Communications backbone cable terminations shall have a special indicator such as “SCR” (Scoreboard Control Room), “AR#” (Amplifier Room #), etc.

1) Example: “MTR-SCR” = single cable from MTR to Scoreboard Control Room.
2) Example: “3A-AR2” = single cable from TR-3A to Amplifier Room #2”.

3. Horizontal Cables:

a. Label provided at both ends shall indicate point of origin (i.e., MTR or TR designator), patch panel designator (A, B, C, etc.), and port number (01, 02, 03, etc.).

1) Example: “MTR-A.23” = horizontal cable originating from port “23” on patch panel “A” at the MTR.
2) Example: “3A-C.23” = horizontal cable originating from port “23” on patch panel “C” at TR-3A.

4. Device Faceplates:

a. Label provided at each faceplate shall indicate point of origin (i.e., MTR or TR designator) for cables terminated at that device.

1) Example: “MTR” = Device faceplate for cables originating from the MTR.
2) Example: “3A” = Device faceplate for cables originating from TR-3A.

5. Device Outlets:

a. Label provided at each device jack/outlet shall indicate patch panel designator (A, B, C, etc.) and port number (01, 02, 03, etc.) for cable point of origin.

1) Example: “A.23” = horizontal cable originating from port “23” on patch panel “A” at the room indicated on the faceplate label.

6. Patch Panels (Horizontal and Backbone Cable Terminations):

a. Labels provided at patch panels for HORIZONTAL cable terminations shall start with “A” for the first patch panel (in each room) and letter sequentially (B, C, etc.) thereafter.
b. Labels provided at patch panels for BACKBONE cable terminations shall start with “AA” for the first patch panel (in each room) and letter sequentially (BB, CC, etc.) thereafter.
c. Patch panel ports shall be labeled for each panel starting with “1” or “01” and numbering each port sequentially.

7. Fiber Termination Panels

    a. Label provided at termination panels for backbone or horizontal fiber optic cabling shall start with “1” for the first panel (in each room) and number sequentially (2, 3, etc.) thereafter.
    b. Fiber termination panel ports shall be labeled for each panel starting with “1” or “01” and numbering each port sequentially.

8. Wiring Blocks (Copper Backbone Terminations, if applicable)

    a. Label provided at termination panels for copper backbone cabling shall start with “1” for the first block (in each room) and number sequentially (2, 3, etc.) thereafter.

9. Cabinets / Racks

    a. Label provided at cabinets shall start with “CABINET-1” for the first cabinet (in each room) and number sequentially (CABINET-2, etc.) thereafter.
    b. Label provided at racks shall start with “RACK-1” for the first rack (in each room) and number sequentially (RACK-2, etc.) thereafter.

10. Grounding Busbars

    a. Labels are not required for the grounding busbars.

11. Grounding Conductors

    a. Label provided at the TMGB end of the Telecommunications Bonding Backbone (TBB) shall indicate the Communications Room where the cable originates from.

        1) Example: “5A” = TBB originating from TR-5A, routed down through Riser-A Communications Rooms and terminated on the TMGB.

    b. Label provided at each end of a Grounding Equalizer (GE) cable interconnecting two I-TGBs shall indicate both Communications room designators.

        1) Example: “3A-3D” = GE routed between I-TGBs in TR-3A and TR-3D.

    c. Label provided at each end of grounding cable routed from a ground busbar to the nearest Electrical Ground Busbar shall indicate the Communications room designator and “EGB” for nearest “Electrical Grounding Busbar.”

        1) Example: “3A-EGB” = Grounding conductor routed between TGB in TR-3A and the EGB in the nearest Electrical Room.

    d. Label provided at each end of the Equipment Bonding Conductors (EBC) interconnecting each rack, cabinet, ladder rack, etc. within a Communications Room back to the TGB or TMGB shall start with “1” for the first cable (in each room) and number sequentially (2, 3, etc.) thereafter.

12. Conduits

    a. Label provided each end of Low Voltage conduits shall indicate the point of origin for the opposite end, such as the Communications Room designator or device location Room Number.

b. Final room number labeling shall be coordinated with the Owner, Architect, and Engineer prior to initiating work.
c. Horizontal device conduit originating from a nearby cable tray (if applicable) shall indicate “TRAY” at the device end and the device location (i.e., room number) at the cable tray end.
d. Horizontal device conduit originating from accessible ceiling directly above a device does not require labels at either end.
e. Conduit sleeves (10-ft or shorter) do not require labels at either end.

13. Pull-boxes

a. Label provided pull-boxes or conduit ends terminating into a pull-box shall clearly indicate where each conduit originates from, based on “conduit” section above.

END OF SECTION

APPENDIX 1 - EQUIPMENT SCHEDULE

NOTE: There is no product number appendix for this section. Refer to other Division 27 specification sections for specific product information.

APPENDIX 2 - SPECIFICATION COMPLIANCE MATRIX TEMPLATE

Indicate compliance of the proposed equipment and/or services by the word "Comply" following each paragraph number. Indicate an exception to the requirement by the word "Exception" following the applicable paragraph number. Should the proposed equipment and/or services not entirely comply with the requirements specified, but ultimately achieve the intent, the Bidder shall explain fully the extent, or lack thereof, of compliance for the applicable equipment and/or services proposed. Instances where there is no indication of compliance or exception shall be considered non-compliant.

Contractor shall submit Compliance Matrix with the Bid Proposal AND at the time of Product Data submittal (as indicated previously in this specification) so that a complete system submittal reviewed can be performed. Contractor shall use the following template to create a full Compliance Matrix for each specification section including Parts 1, 2 and 3.

	COMPLIANCE	**EXPLANATION**
PART 1		
1.1		
A	COMPLY	
B	EXCEPTION	Note clarifications and/or reason for exception here.
C	COMPLY	
1.2		
A.1	COMPLY	
A.2	COMPLY	
B	COMPLY	
C.1	COMPLY	
C.2	COMPLY	
D.1a	COMPLY	
D.1b	COMPLY	
D.2a	COMPLY	
xx	COMPLY	
xx	COMPLY	

APPENDIX 3 - PRODUCT DATA & SHOP DRAWING SUBMISSION CHECKLIST

NOTE: Contractor shall utilize checklist below to ensure comprehensive product data and shop drawings are submitted for review, including submittals compiled between multiple sub-contractors (as applicable). This checklist is intended help establish submittal expectations specific to each specification section and to serve as a pre-check document for each contractor. Refer to submittal section of these specifications for additional requirements.

	GENERAL ITEMS
	Compliance matrix – Required for each Division 27 section
	Proposed project schedule (procurement, installation, final testing/punch, etc.)
	PRODUCT DATA
	Manufacturer warranty information
	Equipment component list – matching order of Appendix 1 for each Division 27 section
	Equipment specification sheets – matching order of Appendix 1 and with each part number highlighted to match the equipment component list
	Refer to 27 05 00 section 1.3-C for additional requirements

	SHOP DRAWINGS
	27 05 00 - Common Work Results for Communications (General requirements, applicable to all specification sections)
	All shop drawings, product data and compliance matrix to be submitted together
	Combined legends, plans, details, etc. may be provided to encompass multiple specification sections
	Refer to 27 05 00 section 1.3-D for additional requirements

	27 05 26 - Telecommunications Grounding and Bonding
	27 05 26 and 27 11 00 to be submitted together if provided by same contractor
	Legend: indicate symbol key, labeling scheme, scope clarification notes, etc.
	One-lines: indicate all conductor types/rating, routing, connection points, labeling, etc.
	Details: indicate busbar components, connection types/points, etc.

	27 05 33 - Telecommunications Raceways and Boxes
	27 05 33 and 27 05 36 to be submitted together
	Legend: indicate symbol key, labeling scheme, scope clarification notes, etc.
	One-lines: indicate riser conduits / tray, conduit allocation per system (including spares), etc.
	Site plan: indicate other utilities, conduit types, entry points, etc.
	Floor plans: indicate rated walls/floors, tray/conduit routes, floor boxes, pull-boxes, plenum boxes, etc.
	Details: indicate conduit support systems, grounding, fire-proofing methods, etc.

	27 05 36 - Cable Trays (submit cable tray specific shop drawings with RCPs shown)
	27 05 33 and 27 05 36 to be submitted together
	Legend: indicate symbol key (including mounting height tags), scope clarification notes, etc.
	RCPs: indicate ceiling types, rated walls/floors, tray/conduit routes, access/clearances, etc.
	Details: indicate tray support systems, grounding, fire-proofing methods, etc.

	27 11 00 - Communications Equipment Room Fit-Out
	27 05 26 and 27 11 00 to be submitted together if provided by same contractor
	Legend: indicate symbol key, labeling scheme, scope clarification notes, etc.
	Floor plans: indicate rack positions, ladder rack, conduit allocation and stub-up locations, etc.
	Wall elevations: indicate wall mounted cable tray, conduit stub-ups, wall mounted SCPs, DAS, etc.
	Rack elevations: indicate fiber termination shelves, patch panels, cable managers, AV equipment, Owner equipment, PDUs, UPS etc.
	Details: indicate rack and cable tray mounting details, conduit supports, rack-to-floor attachments, etc.

	27 13 13 - Communications Copper Backbone Cabling
	Legend: indicate symbol key, labeling scheme, scope clarification notes, etc.
	One-lines: indicate all cable types/rating, routing, termination types, labeling, etc.
	Rack elevations: submit with 27 11 00

	27 13 23 - Communications Optical Fiber Backbone Cabling
	Legend: indicate symbol key, labeling scheme, scope clarification notes, etc.
	One-lines: indicate all cable types/rating, routing, termination types, labeling, etc.
	Rack elevations: submit with 27 11 00
	Details: indicate termination plate details and placement in remote enclosures, AV racks, etc.

	27 15 00 - Communications Horizontal Cabling
	Legend: indicate symbol key, labeling scheme, scope clarification notes, etc.
	Site plan: indicate OSP cable routes, termination locations, etc.
	Floor plans: indicate updated comm room divider lines, device labels, typical conduit paths, etc.
	Rack elevations: submit with 27 11 00
	Details: indicate termination plate details and placement in remote enclosures, AV racks, etc.

SECTION 27 05 26 - TELECOMMUNICATIONS GROUNDING AND BONDING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Product Appendix: Refer to Appendix 1, Equipment Schedules, at the end of this section, for specific product information on the benchmark products. These equipment schedules should be the baseline for product data submittals but are not intended to be an all-encompassing bill of materials, unless noted otherwise.

B. Refer to Section 27 05 00 (Part 1 and Part 3) for requirements that shall be fulfilled as part of this specification section.

C. General provisions of Contract, including General and Supplementary Conditions and Division 1 Specification sections.

D. Architectural, Electrical, and Technology Drawings. Other systems drawings may apply.

E. Division 26 Specifications. Coordinate Electrical System requirements. Basic Electrical Materials and Methods sections apply to work of this section.

F. Rough carpentry is specified in a Division 6 section.

1.2 SUMMARY

A. Refer to Section 27 05 00 for requirements that shall be fulfilled as part of this specification section.

B. Extent of telecommunications grounding and bonding work is indicated by Technology Drawings (one-line, enlarged plans, and details) and as specified herein. Grounding and bonding work is defined to encompass systems, circuits, and equipment.

C. A dedicated telecommunications ground system shall be provided with insulated bonding backbones (TBB) as applicable, equalizing conductors (TEC) as applicable, and pre-drilled copper busses (TMGB and TGB) shall be provided at each communications room to bond metallic equipment and hardware components.

D. Applications of telecommunications grounding and bonding work in this section includes, but may not be limited to: raceways such as conduits and cable trays, metallic cable sheaths, equipment enclosures, cabinets and racks, building structure, electrical power and/or grounding systems components, service equipment, etc.

E. Refer to other Division 26 and Division 27 sections for wires/cables, telecommunications raceways, boxes and fittings, and wiring devices which are required in conjunction with telecommunications grounding and bonding work; not work of this section.

1.3 SUBMITTALS

A. General Description and Requirements

1. Refer to Section 27 05 00 for requirements that shall be fulfilled as part of this specification section.

B. Product Data:

1. Refer to Section 27 05 00 for requirements that shall be fulfilled as part of this specification section.

C. Prefabrication Shop Drawings:

1. One-Line Wiring Diagrams: Include one-line wiring diagrams for telecommunications grounding and bonding work which indicate routing of grounding electrode conductors, equipment grounding connections and busbars.
2. Details: Indicating grounding method for cable tray and cabinets and/or racks.
3. Labeling: Provide documentation of all labeling schemes for grounding busbars and grounding conductors.
4. Documentation: Provide an electronic copy for review or as indicated in Division 1 general conditions.

1.4 QUALITY ASSURANCE

A. Refer to Section 27 05 00 for requirements that shall be fulfilled as part of this specification section.

B. Manufacturer’s Qualifications: Firms regularly engaged in manufacture of grounding and bonding products, of types, and ratings required, and ancillary grounding materials, including stranded cable, copper braid and bus, grounding electrodes and plate electrodes, and bonding jumpers whose products have been in satisfactory use in similar service for not less than 5 years.

C. Installer’s Qualifications: Firms with at least 5 years of successful installation experience on projects with telecommunications grounding work similar to that required for project.

D. Codes and Standards:

1. Electrical Code Compliance: Comply with applicable local electrical code requirements of the authority having jurisdiction, and the current edition of the NEC as applicable to electrical grounding and bonding, pertaining to systems, circuits and equipment.
2. UL Compliance: Comply with applicable requirements of UL Standards No.’s 467, Electrical Grounding and Bonding Equipment”, and 869 “Electrical Service Equipment”, pertaining to grounding and bonding of systems, circuits and equipment. In addition, comply with UL Std 486A, “Wire Connectors and soldering Lugs for Use with Copper Conductors.” Provide grounding and bonding products which are UL-listed and labeled for their intended usage.
3. IEEE Compliance: Comply with applicable requirements and recommended installation practices of IEEE Standards 80, 81, 141 and 142 pertaining to grounding and bonding of systems, circuits and equipment.
4. TIA Compliance: Comply with applicable requirements and recommended installation practices of the current editions of TIA Standards 568, 569, and 607.

5. BICSI Compliance: Comply with applicable requirements and recommended installation practices of the current editions of BICSI Standards TDM, CO-OSP, Data Network Design Reference Manual, and Wireless.

PART 2 - SYSTEM REQUIREMENTS

2.1 GENERAL

A. Materials and Components:

1. Provide telecommunications grounding and bonding system; with assembly of materials, including, but not limited to, cables/wires, connectors, solderless lug terminals, grounding electrodes and plate electrodes, bonding jumper braid, surge arresters, and additional accessories needed for a complete installation. Where more than one type of component product meets indicated requirements, selection is installer's option. Where materials or components are not indicated provide products which comply with NEC, UL, IEEE, NEMA, ANSI, TIA, and BICSI requirements and with established industry standards for those applications indicated.

2.2 BUS BARS

A. Materials and Components:

1. Provide telecommunications grounding bus bars with a TIA J-STD-607-A style and BICSI recommended bolt pattern.

B. Telecommunications Grounding Busbar (TMGB, TGB, I-TGB, and C-TGB):

1. Refer to Technology Drawings (grounding details) for additional requirements such as bonding conductor connections and dual busbar locations (such as TMGB) as applicable. Contractor shall provide multiple busbars if necessary, to accommodate the quantity of grounding cables that shall tie into the busbar, in particular the TMGB on larger projects.
2. Provide copper UL listed bus with pre-drilled two-hole bonding lugs.
3. Pre-drilled holes shall be primarily for 4 AWG two-hole bonding lugs. Holes shall be a nominal diameter of 5/16-inch (8mm) with 5/8-inch (16mm) between the hole's centerline.
4. Grounding busbar shall also have a minimum of (6) pre-drilled two-hole lug points for #3/0 AWG bonding lugs. Holes shall be a nominal diameter of 7/16-inch (11mm) with 1-inch (25mm) between the hole's centerline.
5. Grounding busbar shall have isolated stand-offs to provide a minimum 1-inch clearance off of wall.
6. Physical Size:

    a. TMGB: 20-inch x 4-inch x 1/4-inch.
    b. TGB and I-TGB: 10-inch x 2-inch x 1/4-inch.
    c. C-TGB (Cabinet): 19-inch x 1 inch x 1/4-inch.

2.3 CONDUCTORS

A. Insulated Conductors: Copper wire or cable insulated for 600V unless otherwise required by applicable Code or authorities having jurisdiction.

1. Telecommunications Bonding Backbone (TBB): Provide #3/0 AWG, unless noted otherwise.
2. Telecommunications Grounding Equalizers (GE): Provide #3/0 AWG, unless noted otherwise.
3. Tap Conductors: Provide #3/0 AWG unless noted otherwise.
4. Equipment and Component Bonding Conductors (EBC): Provide No. 4 or No. 6 AWG, insulated stranded conductors based on conductor distances.

2.4 CONNECTORS

A. Listed and labeled by a nationally recognized testing laboratory acceptable to authorities having jurisdiction for applications in which used, and for specific types, sizes, and combinations of conductors and other items connected.

B. Compression Fittings: All cable splices from bonding backbone to tap conductors and tie cables shall use irreversible compression fittings to join cable ends.

C. Bolted Connectors for Conductors and Pipes: Copper or copper alloy, bolted pressure-type, with at least two bolts.

1. Pipe Connectors: Clamp type, sized for pipe.

D. Welded Connectors: Exothermic-welding kits of types recommended by Cadweld (or approved equal) manufacturer for materials being joined and installation conditions.

PART 3 - EXECUTION

3.1 APPLICATIONS

A. Conductors: Stranded conductors shall be used for all telecommunication ground cables, unless otherwise indicated.

B. Telecommunications Main Grounding Bus (TMGB):

1. Refer to Technology drawings for exact location.
2. Install bus on insulated spacers 1-inch (25 mm) minimum, from wall and 12-inches (300 mm) above finished floor, unless otherwise indicated.
3. The TMGB shall be connected to the main electrical service intersystem bonding termination with an insulated #3/0 (120mm^2) stranded grounding conductor installed in continuous conduits.
4. The TMGB shall be connected to building steel if existing within room with an insulated #3/0 AWG (120mm^2) stranded grounding conductor.

C. Telecommunications Grounding Bus (TGB):

1. Install in all low voltage or communication rooms. Refer to Technology drawings for exact locations.

2. Install bus on insulated spacers 1-inch (25 mm), minimum, from wall and 12-inches (300 mm) above finished floor, unless otherwise indicated.
3. The TGB shall be connected to the TMGB bus via the TBB with an insulated #3/0 AWG (120mm^2) stranded grounding conductor installed in continuous conduits.
4. The TGB shall be connected to the nearest AC electrical service intersystem bonding termination with an insulated #3/0 AWG (120mm^2) stranded grounding conductor installed in continuous conduits.
5. The TGB shall be connected to building steel if existing within room with an insulated #3/0 AWG (120mm^2) stranded grounding conductor.

D. Interconnected Telecommunications Grounding Bus (I-TGB):

1. I-TGBs (TGBs) shall be interconnected (daisy-chained) with a Telecommunications Grounding Equalizer (GE) installed in continuous conduit on the highest level installation, bottom level installation, and every third level in between (as applicable) to complete the Telecommunication Grounding System, per industry standards.
2. Install bus on insulated spacers 1-inch (25 mm), minimum, from wall and 12-inches (300 mm) above finished floor, unless otherwise indicated.
3. The I-TGB shall be connected to the TMGB bus via the TBB with an insulated #3/0 AWG (120mm^2) stranded grounding conductor installed in continuous conduits.
4. The I-TGB shall be connected to the nearest AC electrical service intersystem bonding termination with an insulated #3/0 AWG (120mm^2) stranded grounding conductor installed in continuous conduits.
5. The I-TGB shall be connected to building steel (if existing within room) with an insulated #3/0 AWG (120mm^2) stranded grounding conductor.

E. Cabinet Telecommunications Grounding Bus (C-TGB):

1. Install in Telecommunications Cabinets/Racks. Refer to Technology drawings for exact locations.
2. The C-TGB shall be connected to the TMGB bus via the TBB with an insulated #3/0 AWG (120mm^2) stranded grounding conductor installed in continuous conduits.
3. The C-TGB shall be connected to the nearest AC electrical service intersystem bonding termination with an insulated #3/0 AWG (120mm^2) stranded grounding conductor installed in continuous conduits.
4. The C-TGB shall be connected to building steel if existing within room with an insulated #3/0 AWG (120mm^2) stranded grounding conductor.

F. Conductor Terminations and Connections:

1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
2. Connections to Structural Steel: Welded connectors.

3.2 EQUIPMENT AND COMPONENT GROUNDING

A. Install insulated equipment grounding conductors to all telecommunications equipment and components.

B. Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70, NEMA, ANSI, TIA and BICSI:

1. Armored and metal-clad cable sheaths.
2. Equipment Cabinets and Racks.
3. Cable trays and ladder racks.

4. Conduits sections and conduit sleeves.
5. Equipment and Power Supply Enclosures.
6. Wall mounted cable terminals.
7. Other metallic components as necessary.

3.3 EXAMINATION

A. Examine areas and conditions under which telecommunications grounding and bonding connections are to be made and notify Engineer in writing of conditions detrimental to proper completion of work. Do not proceed with work until unsatisfactory conditions have been corrected.

3.4 INSTALLATION OF TELECOMMUNICATIONS GROUNDING AND BONDING SYSTEMS

A. General: Install telecommunications grounding and bonding systems in accordance with manufacturer's instructions and applicable portions of NEC, NECA's "Standard of Installation", and in accordance with recognized industry practices to ensure that products comply with requirements.

B. Labeling:

1. The final labeling scheme shall be coordinated with Owner, Architect, and Engineer prior to finalizing and initiating any work. A sample scheme shall be submitted for approval.
2. Refer to Specification Section 27 05 00 for additional requirements that shall be fulfilled as part of this specification section.

C. Coordinate with other electrical and telecommunications work as necessary to interface installation of telecommunications grounding and bonding system work with other work.

D. Grounding Conductors: Route along shortest and straightest paths possible, unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.

E. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance, except where routed through short lengths of conduit.

1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install so vibration is not transmitted to rigidly mounted equipment.
3. Use exothermic-welded connectors for outdoor locations, but if a disconnect-type connection is required, use a bolted clamp.

F. Install all connectors on clean metal contact surfaces, to ensure electrical conductivity and circuit integrity.

G. Tighten grounding and bonding connectors and terminals, including screws and bolts, in accordance with manufacturer's published torque tightening values for connectors and bolts. Where manufacturer's torquing requirements are not indicated, tighten connections to comply with tightening torque values specified in UL 486A to assure permanent and effective grounding.

H. Apply corrosion-resistant finish to field-connections, buried metallic grounding and bonding products, and places where factory applied protective coatings have been destroyed, which are subjected to corrosive action.

I. Install all connectors on clean metal contact surfaces, to ensure electrical conductivity and circuit integrity.

3.5 FIELD QUALITY CONTROL

A. Upon completion of installation of electrical grounding and bonding systems, test ground resistance with ground resistance tester. Where tests show resistance to ground is over 5 ohms, take appropriate action to reduce resistance to 5 ohms, or less, then retest to demonstrate compliance.

END OF SECTION

APPENDIX 1 - EQUIPMENT SCHEDULE

General Notes:
1. This specification is intended to be performance based, with the expectation that an “end-to-end” solution is provided by one of the “pre-approved” manufacturers (or partnerships) listed below.
2. Products listed below are intended to establish “benchmark” products from one or more of the “pre-approved manufacturers”. The listed benchmark products shall be used as a baseline when submitting products from a pre-approved manufacturer that does not have specific products listed.
3. Pre-approved manufacturers (listed in alphabetical order) include:
   a. Burndy
   b. Legrand / Ortronics
   c. Southwire

Table 1 - Telecom Grounding Components			
Item	**Part Name/Description**	**Manufacturer**	**Part Number**
1	Telecom Main Grounding Busbar - 4"W x 20"L		
		Legrand / Ortronics	GB4X20TMGB
2	Telecom Grounding Busbar - 2"W x 10"L		
		Legrand / Ortronics	GB2X10TGB
3	3/0 Grounding Conductor (Green)		
		Southwire	GN:556123
4	C-Type Compression Taps		
		Legrand / Ortronics	CTHD4666
5	#6 AWG Bonding Conductor (Green)		
		Southwire	GN:204974
6	Compression Lugs - #6 AWG		
		Legrand / Ortronics	CL2LB6A
7	Compression Lugs - 3/0 AWG		
		Burndy	YAZ272TC38
8	Telecom Horizontal Ground Bar Kit for Remote Cabinet		
		Legrand / Ortronics	GBH19KIT

APPENDIX 2 - SPECIFICATION COMPLIANCE MATRIX TEMPLATE

Indicate compliance of the proposed equipment and/or services by the word "Comply" following each paragraph number. Indicate an exception to the requirement by the word "Exception" following the applicable paragraph number. Should the proposed equipment and/or services not entirely comply with the requirements specified, but ultimately achieve the intent, the Bidder shall explain fully the extent, or lack thereof, of compliance for the applicable equipment and/or services proposed. Instances where there is no indication of compliance or exception shall be considered non-compliant.

Contractor shall submit Compliance Matrix with the Bid Proposal AND at the time of Product Data submittal (as indicated previously in this specification) so that a complete system submittal reviewed can be performed. Contractor shall use the following template to create a full Compliance Matrix for each specification section including Parts 1, 2, and 3.

	COMPLIANCE	**EXPLANATION**

SECTION 27 05 33 - TELECOMMUNICATIONS RACEWAYS AND BOXES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Product Appendix: Refer to Appendix 1, Equipment Schedules, at the end of this section, for specific product information on the benchmark products. These equipment schedules should be the baseline for product data submittals but are not intended to be an all-encompassing bill of materials. Submit other proposed raceway and box products described within this specification and shown on the Technology Drawings along with related Division 26 product submittals with a clear note that Division 27 review is required.

B. Refer to Section 27 05 00 (Part 1 and Part 3) for requirements that shall be fulfilled as part of this specification section.

C. General provisions of Contract, including General and Supplementary Conditions and Division 1 Specification sections.

D. Architectural, Electrical, and Technology Drawings. Other systems drawings may apply.

E. Division 26 Specifications. Coordinate Electrical System requirements. Basic Electrical Materials and Methods sections apply to work of this section, including, but not limited to, Raceway and Boxes section for conduit connectors, fittings, and couplings.

F. Division 27 Specifications. Provide requirements in all corresponding Division 27 Specifications.

G. Division 7 Specifications. Coordinate Section “Firestopping” for conduit penetrations through rated walls and slabs.

H. Vertical Transportation (Elevators, Escalators, etc.) Specifications and/or Codes Requirements.

I. Rough carpentry is specified in a Division 6 section.

1.2 SUMMARY

A. Drawings are diagrammatic. All bends, boxes, fittings, couplings are not necessarily shown. Supply as necessary to comply with the National Electric Code.

B. This Section includes raceways for low voltage cabling. Types of raceways, boxes and fittings in this section include the following:

1. Electrical metallic tubing (EMT).
2. Intermediate metal conduit (IMC).
3. Rigid metallic conduit (RMC).
4. Flexible metallic conduit – Not permitted without written approval.
5. Liquid-tight flexible conduit – Not permitted without written approval.
6. Rigid non-metallic conduit (RNC)
7. Polyvinyl Chloride conduit (PVC)
8. Outlet boxes.
9. Junction boxes.

10. Pull boxes.
11. Bushings.
12. Locknuts.
13. Knockout closures.

1.3 SUBMITTALS

A. Refer to Section 27 05 00 for requirements that shall be fulfilled as part of this specification section.

B. Product Data: This section does not have a “benchmark” product Appendix; thus, Contractor shall submit product data for all applicable products as required per Technology Drawings including, but not limited to:

1. Raceways and fittings.
2. Boxes and fittings.

C. Installation Instructions: Manufacturer’s written installation instructions for raceway products.

1.4 QUALITY ASSURANCE

A. In addition to Section 27 05 00 requirements, the following shall apply to this specification section.

1. NEMA Compliance: Comply with applicable requirements of NEMA standards pertaining to raceways.
2. NEMA Compliance: Comply with applicable requirements of NEMA Stds/Pub No.’s OS1, OS2 and PUB 250 pertaining to outlet and device boxes, covers and box supports.
3. Federal Specification Compliance: Comply with applicable requirements of FS W-C 586, “Electrical Cast Metal Conduit Outlet Boxes, Bodies, and Entrance Caps.”

PART 2 - SYSTEM REQUIREMENTS

2.1 METAL CONDUIT AND TUBING

A. Electrical Metallic Tubing (EMT) and Fittings: ANSI C80.3.

1. EMT shall be used for standard device outlet raceway, unless otherwise noted.
2. EMT shall be used for backbone conduit sleeves stubbed through floors.

B. Intermediate Metallic Conduit (IMC) and Fittings:

1. IMC shall be used for device outlets mounted below 10-ft in high traffic areas such as parking, loading docks, etc.
2. IMC shall be used for extending service entrance cable from building point of entrance to termination or transition point when the distance exceeds 50 feet.

C. Rigid Metallic Conduit (RMC) and Fittings:

1. RMC shall be used for device outlets located in areas exposed to weather/elements.
2. RMC shall be used for device outlets mounted below 10-ft in high traffic areas such as parking, loading docks, etc.
3. RMC shall be used for extending service entrance cable from building point of entrance to termination or transition point when the distance exceeds 50 feet.

D. Flexible Metal Conduit: UL 1, zinc-coated steel.

1. Flexible metal conduit shall only be used in locations proposed by the Contractor and specifically reviewed and approved by the Engineer.
2. Flexible conduit shall not exceed 6-feet in length before transitioning to rigid conduit unless specifically reviewed and approved by the Engineer. For distances exceeding 6-feet, provide flexible conduit that is one trade size larger.

E. Liquid-tight Flexible Metal Conduit and Fittings: UL 360.

1. Liquid-tight flexible metal conduit shall only be used in locations proposed by the Contractor and specifically reviewed and approved by the Engineer.
2. Flexible conduit shall not exceed 6-feet in length before transitioning to rigid conduit unless specifically reviewed and approved by the Engineer.

2.2 NON-METALLIC CONDUIT AND DUCTS

A. Conduit, Tubing and Duct Accessories: Types, sizes and materials complying with manufacturer's published product information. Mate and match accessories with raceway.

B. Electrical non-metallic tubing (ENT): NEMA TC13 and UL1653.

2.3 CONDUIT BODIES AND FITTINGS

A. General: Types, shapes, and sizes as required to suit individual applications and NEC requirements. Provide matching covers with gaskets secured with corrosion-resistant screws.

B. Metallic Conduit and Tubing: Use metallic conduit bodies. Use bodies with threaded hubs for threaded raceways. Use conduit bodies conforming to UL514B.

C. EMT Conduit Bodies: Use bodies with steel set screw connectors and couplings for interior applications and steel compression gland connectors and couplings for exterior applications.

D. Non-metallic Conduit and Tubing: Use non-metallic conduit bodies conforming to UL514B.

E. Liquid-Tight Flexible Conduit Fittings – Not permitted without written approval: With threaded grounding cone, a metallic, nylon or equal plastic compression ring, and a gland for tightening. Either steel or malleable iron only with insulated throats and male thread and locknut or male bushing with or without O-ring seal. Each connector shall provide a low resistance ground connection between the flexible conduit and the outlet box, conduit or other equipment to which it is connected.

F. Bushings: Insulated type, designed to prevent abrasion of wires without impairing the continuity of the conduit grounding system, for rigid metallic conduit, IMC and EMT, larger than 3/4-inch size.

G. Expansion Fittings: Each conduit that is buried in or secured to the building construction on opposite sides of a building expansion joint and each long run of exposed conduit that may be subject to excessive stresses shall be provided with an expansion fitting. Expansion fittings for rigid metallic conduit shall be hot-dipped galvanized malleable iron with factory installed packing and a grounding ring. Expansion fittings for rigid non-metallic conduit shall be of the short type in runs 25-feet (7.6m) or less, and the long type in runs 26 to 80-feet (7.9 to 24.3m). The long type shall be a two-piece barrel and piston joint, providing 6-inch (150mm) of the total movement range in 3/4-inch (19mm) through 6-inch (150mm) conduit sizes. The short type shall be a one piece, coupling with O-ring, providing 2-inch (50mm) of total movement range in 3/4 to 2-inch (19 to 50mm) conduit sizes.

H. Seal Off Fittings: Threaded, zinc or cadmium coated, cast or malleable iron type for metallic conduits. Fittings used to prevent passage of water vapor shall be of the continuous drain type.

2.4 FABRICATED MATERIALS - BOXES

A. Device Outlet Back-Boxes: Provide galvanized flat rolled sheet steel outlet wiring boxes, of shapes, cubic inch capacities, and sizes (two-gang, 4 11/16-inch x 4 11/16-inch 2 1/8-inch deep (120mm x 120mm x 54mm)), including box depths as required, suitable for installation at respective locations. Construct outlet boxes with mounting holes, and with cable and conduit-size knockout openings in bottom and sides. Provide boxes with threaded screw holes, with corrosion resistant cover and grounding screws for fastening surface and device type box covers, and for equipment type grounding.

1. Outlet Box Accessories: Provide outlet box accessories as required for each installation, including box supports, mounting ears and brackets, wallboard hangers, box extension rings, fixture studs, cable clamps and metal straps for supporting outlet boxes, which are compatible with outlet boxes being used to fulfill installation requirements for individual wiring situations. Choice of accessories is Installer’s code-compliance option.
2. Outlet Box Device Covers: Provide box covers as an individual component. In no instance shall a pre-fabricated box with a fixed box cover be utilized. All device covers shall be inter-changeable in the field based on openings requirements at respective locations. Box covers shall not be used as the box mounting bracket or as the mounting mechanism.

B. Rain-tight and Weatherproof Outlet Boxes: Weatherproof devices shall be provided at all exterior locations and any location susceptible to water and other exterior conditions. Provide corrosion-resistant cast-metal rain-tight outlet wiring boxes, of types, shapes and sizes, including depth of boxes, with threaded conduit holes for fastening telecommunications conduit, cast-metal and plastic face plates with spring-hinged watertight covers (polycarbonate) suitably configured for each application, including face plate gaskets and corrosion-resistant plugs and fasteners. Watertight cover shall allow for patch cords to be plugged in and sealed while in operation.

C. Junction and Pull Boxes: Provide galvanized code-gauge sheet steel junction and pull boxes, with screw-on covers; of types, shapes, and sizes, to suit each respective location and installation; with welded seams and equipped with stainless steel nuts, bolts, screws, and washers. Pull boxes installed in finished spaces must be flush mounted cabinets provided with trim, hinged door and flush latch and lock to match flush mounted panel board trim. Exact size shall meet minimum industry standards based on conduit quantities and stacking arrangement, as indicated in the table below:

Conduit Trade Size mm (in)	Width mm (in)	Length mm (in)	Depth mm (in)	Width Increase for Additional Conduit mm (in)
27 (1)	101 (4)	406 (16)	76 (3)	51 (2)
35 (1-1/4)	152 (6)	508 (20)	76 (3)	76 (3)
41 (1-1/2)	203 (8)	686 (27)	101 (4)	101 (4)
50 (2)	203 (8)	914 (36)	101 (4)	127 (5)
63 (2-1/2)	254 (10)	1067 (42)	127 (5)	152 (6)
78 (3)	305 (12)	1220 (48)	127 (5)	152 (6)
91 (3-1/2)	305 (12	1370 (54)	152 (6)	152 (6)
100 (4)	381 (15)	1525 (60)	203 (8)	203 (8)

D. Bushings, Knockout Closures and Locknuts: Provide corrosion-resistant box knockout closures, conduit locknuts and malleable iron conduit bushings, offset connectors, of types and sizes, to suit respective installation requirements and applications.

E. AV / Broadcast Box – Exterior Wall Semi-Flush – Refer to Appendix 1:

1. Equipped with 14GA front door on lift-off hinges.
2. Dimensions: 22” W x 22” H x 10” D
3. Cable Pass Through (CPT) Seal: Closed cell neoprene rubber.
4. Drip Shield.
5. 304 Stainless or Cold Rolled Steel 16GA, Brush Finish.
6. 19” Rack Mounts, 12GA.
7. Standard ¼ turn latches with locking cylinders.

PART 3 - EXECUTION

3.1 WIRING METHOD

A. Indoors: Use the following installation methods:

1. Exposed (below 10 ft. to floor): Intermediate metal conduit, rigid metal conduit.
2. Exposed (above 10 ft. or in electrical room): Electrical metallic tubing.
3. Concealed: Electrical metallic tubing.
4. Within concrete slabs: electrical non-metallic tubing or rigid non-metallic conduit. Homeruns shall be in conduit. Maximum sizes and locations as approved by the Structural Engineer.
5. Service entrance extension beyond 50-feet: Intermediate metal conduit, rigid metal conduit.

3.2 INSTALLATION OF RACEWAYS

A. General: Install telecommunications raceways in accordance with manufacturers' written installation instructions, applicable requirements of NEC, NEMA, ANSI, TIA, BICSI, and as follows.

1. Telecommunications service entrance cables that extend beyond 50-feet from the building point of entrance shall be in IMC or RMC from the point of entrance to the point of termination without breaks as require by the NEC.
2. Complete installation of telecommunications raceways before starting installation of conductors within raceways.
3. Elevation of Raceway: Where possible, install horizontal raceway runs above water and steam piping.
4. Provide supports for raceways as specified elsewhere in Electrical and/or Communications specification sections and in accordance with NEC and local authorities' seismic requirements.
5. Prevent foreign matter from entering raceways by using temporary closure protection.
6. Install pull lines or tape in empty raceways with three feet extending from each end, knotted and secured to remain in place. For indoor applications, use pull line having not less than 200-lb tensile strength. For outdoor applications use pull tape or wire having not less than 1200-lb tensile strength.

B. Labeling:

1. The final labeling scheme shall be coordinated with Owner, Architect, and Engineer prior to finalizing and initiating any work. A sample scheme shall be submitted for approval.
2. Refer to Specification Section 27 05 00 for additional requirements that shall be fulfilled as part of this specification section.

C. Clearances: Telecommunications raceway shall be routed to maintain appropriate clearances from potential interfering electrical sources per NEC, NEMA, ANSI, TIA, and BICSI requirements. Provided below are minimum requirements of key components that shall be maintained. For any instances where field conditions do not allow for the minimum clearances, the Contractor shall notify the Architect and Engineer so that an acceptable solution can be coordinated.

1. 120V Power Conduits: 6-inches (150mm)
2. 208V and Higher Power: 24-inches (600mm)
3. Lighting System: 12-inches (300mm)
4. Transformers: 48-inches (1200mm)
5. Motors and Fans: 48-inches (1200mm)
6. Other Interfering Sources to be field verified and coordinated by Contractor with Architect and Engineer.

D. Unobstructed Cabling Pathways: Raceway installer shall provide conduit sleeves through all walls and continuous segments above inaccessible ceiling spaces to ensure unobstructed cable pathways are provided from each device location back to the appropriate HC. (Refer to Technology Drawings for additional information.)

E. Horizontal Distance Limitations:

1. Communications horizontal cabling shall not exceed a total cable length of 295-feet (90m) for the permanent basic link. The channel length shall not exceed 325-feet (100m) when patch cords are installed.

2. Contractor(s) responsible for providing the communications horizontal raceway shall ensure that unobstructed pathway to each device location does not cause cable to exceed 295-feet (90m) length from to the nearest horizontal cross-connect (HC) location. This may require unobstructed pathway to be no more than 250-ft (76m) to accommodate necessary cable slack. Contractor shall bring any distance concerns to the attention of the Architect and Engineer during the bid process and/or at a minimum during the shop drawing process, prior to installation.

F. Daisy Chaining of pathways shall not be allowed unless specifically noted on the drawing or detailed on drawings. Each backbox shall be installed with a dedicated pathway. Any proposed or required daisy chaining will be detailed in contractor shop drawings and submittals and approved prior to installation. Any remediation to dedicated pathways as required will be the total responsibility of the Contractor at no additional cost to Owner.

G. In-slab Raceways: Raceways embedded in slabs shall only be permitted with the strict written approval of the Structural Engineer and Architect. For bidding purpose, conduit shall not be permitted in slab with exception of raceways specifically indicated on drawings or details to be in slab (such as on-grade floor box conduits).

H. Conduit Bends and Fittings:

1. Telecommunications conduits shall maintain large radius bends and sweeps. Use electrical 45º or 90º conduit elbows with long bend radii. Provided below are the ratios for minimum conduit bend radius to conduit size diameter:

   a. 6:1 bend radius of the inside conduit diameter for conduit sizes less than 2-inches.
   b. 10:1 bend radius of the inside conduit diameter for conduit sizes equal to or greater than 2-inches.

2. Protect stub-ups from damage where conduits rise from floor slabs. Arrange so curved portion of bends is not visible above the finished slab. All elbow penetration through the slab shall be PVC coated rigid metallic conduit Ells.
3. Make bends and offsets so the inside diameter is not effectively reduced. Unless otherwise indicated, keep the legs of a bend in the same plane and the straight legs of offsets parallel.
4. Use raceway fittings that are of types compatible with the associated raceway and suitable for the use and location. For intermediate metallic conduit, use threaded rigid steel conduit fittings except as otherwise indicated.
5. Run concealed raceways with a minimum of bends in the shortest practical distance considering the type of building construction and obstructions except as otherwise indicated.
6. Telecommunications raceways shall have a maximum pulling length of 100 feet and a maximum 180º total sum of all elbows, sweeps and bends for each pulling length. The maximum bend for any location shall not exceed 90º and a maximum of two 90º bends or equivalent shall be allowed. Pull-boxes or junction-boxes shall be provided where necessary to comply with these requirements.
7. Pull boxes shall be provided in straight sections of conduit only. Pull boxes shall not be used to change pathway direction in any locations.
8. Conduit outlet bodies (i.e., condulet, C, LB, LL, LR, T), shall not be used as cable pull points or to change pathway direction in any locations. These devices are commonly used for electrical/power pathways and are not approved for low voltage cabling.

9. Install raceway sealing fittings in accordance with the manufacturer's written instructions. Locate fittings at suitable, approved, accessible locations and fill them with UL-listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings at the following points and elsewhere as indicated:

    a. Where conduits pass from warm locations to cold locations, such as the boundaries of refrigerated spaces, air-conditioned spaces and walk-in coolers.
    b. Where required by the NEC.

10. Stub-up Connections: Extend conduits through concrete floor for connection to freestanding equipment with an adjustable top or coupling threaded inside for plugs and set flush with the finished floor. Extend conductors to equipment with rigid metallic conduit. Where equipment connections are not made under this contract, install screwdriver-operated threaded flush plugs flush with floor.
11. Flexible connection – Not permitted without written approval: Use flexible conduit with a maximum length of 6-feet (3m) for furniture feeds. Use liquid-tight flexible conduit in wet locations. Install separate equipment grounding conductor across flexible connections.
12. Join raceways with fittings designed and approved for the purpose and make joints tight. Where joints cannot be made tight, use bonding jumpers to provide electrical continuity of the raceway system. Make raceway terminations tight. Where terminations are subject to vibration, use bonding bushings or wedges to assure electrical continuity. Where subject to vibration or dampness, use insulating bushings to protect conductors. Use expansion fittings at building expansion joints.
13. Tighten set screws of threadless fittings with suitable tool.
14. Terminations: Where raceways are terminated with locknuts and bushings, align the raceway to enter squarely and install the locknuts with dished part against the box. Where terminations cannot be made secure with one locknut, use two locknuts, one inside and one outside of the box. All conduit connections to junction boxes shall have insulated bushings.
15. Where terminating in threaded hubs, screw the raceway or fitting tight into the hub so the end bears against the wire protection shoulder. Where chase nipples are used, align the raceway so the coupling is square to the box, and tighten the chase nipple so no threads are exposed.
16. PVC externally coated rigid steel conduit: Use only fittings approved for use with that material. Patch all nicks and scrapes in PVC coating after installing conduit.

I. Aesthetic Requirements:

1. Conceal conduit and EMT, unless indicated otherwise, within finished wall, ceilings, and floors. Keep raceways at least 6-inches (150mm) away from parallel runs of flues and steam or hot water pipes. Install raceways level and square and at proper elevations.
2. Install exposed raceways parallel and perpendicular to nearby surfaces or structural members and follow the surface contours as much as practical. All exposed conduit runs shall be approved by the Architect prior to installing.
3. Run exposed, parallel, or banked raceways together. Make bends in parallel or banked runs from the same center line so that the bends are parallel. Factory elbows may be used in banked runs only where they can be installed parallel. This requires that there be a change in the plane of the run such as from wall to ceiling and that the raceways be of the same size. In other cases, provide field bends for parallel raceways. All exposed conduit routing shall be approved by the Architect prior to installing.
4. All exposed conduits in public areas shall be painted to match surrounding walls as indicated within Architectural construction documents (drawings and specifications). Verify exact color with the Architect. Painting specified herein shall be provided by others.

3.3 INSTALLATION OF ELECTRICAL BOXES AND FITTINGS

A. General: Install electrical boxes and fittings in accordance with manufacturer's written instructions, applicable requirements of NEC and NECA's "Standard of Installation," and in accordance with recognized industry practices to fulfill project requirements.

B. Coordinate installation of electrical boxes and fittings with wire/cable, wiring devices, and raceway installation work.

C. Provide rain-tight or weatherproof covers for all communications device outlets at all interior and exterior locations exposed to weather or moisture.

D. Provide knockout closures to cap unused knockout holes where blanks have been removed.

E. Install electrical boxes in those locations which ensure ready accessibility to enclosed electrical wiring.

F. Installing boxes back-to-back in walls shall not be permitted. Provide no less than 12-inches (150mm) of separation.

G. Position recessed outlet boxes accurately to allow for surface finish thickness.

H. Do not use round boxes where conduit must enter box through side of box, which would result in difficult and unsecure connections when fastened with locknut or bushing on rounded surfaces.

I. Fasten telecommunication and electrical boxes firmly and rigidly to substrates, or structural surfaces to which attached, or solidly embedded electrical boxes in concrete or masonry.

J. Tap and splices, where permitted by these specifications within exterior junction boxes, shall be performed with an encapsulating watertight splice or tap kit which insulates, and moisture seals, the connection. Kit shall consist of the appropriate size and type mold, encapsulating resin and end sealing tape.

K. Subsequent to installation of boxes, protect boxes from construction debris and damage.

L. Outlet back-boxes shall be installed straight on walls to provide a neat appearance of faceplates on finished walls.

3.4 GROUNDING

A. Upon completion of installation work, properly ground telecommunications boxes and demonstrate compliance with requirements.

3.5 ADJUSTING AND CLEANING

A. Upon completion of installation of raceways, inspect interiors of raceways; clear all blockages and remove burrs, dirt, and construction debris.

END OF SECTION

APPENDIX 1 – EQUIPMENT SCHEDULE

General Notes:

1. There is no product number appendix for this section except as shown as Table 1 below.
2. Submit other proposed raceway and box products described within this specification and shown on the Technology Drawings along with the related Division 26 product submittals.
3. This specification is intended to be performance based, with the expectation that an “end-to-end” solution is provided by one of the “pre-approved” manufacturers (or partnerships) listed below.
4. Products listed below are intended to establish “benchmark” products from one or more of the “pre-approved manufacturers”. The listed benchmark products shall be used as a baseline when submitting products from a pre-approved manufacturer that does not have specific products listed.
5. Pre-approved manufacturers (listed in alphabetical order) include:
   a. Bulloch

Table 1 - Telecom Boxes for AV / Broadcast			
Item	**Part Name/Description**	**Manufacturer**	**Part Number**
1	AV / Broadcast Box - Exterior Wall Semi-Flush		
		Bulloch	AV-RP-22x22x10-CPT-DS-SS-S

APPENDIX 2 - SPECIFICATION COMPLIANCE MATRIX TEMPLATE

Indicate compliance of the proposed equipment and/or services by the word "Comply" following each paragraph number. Indicate an exception to the requirement by the word "Exception" following the applicable paragraph number. Should the proposed equipment and/or services not entirely comply with the requirements specified, but ultimately achieve the intent, the Bidder shall explain fully the extent, or lack thereof, of compliance for the applicable equipment and/or services proposed. Instances where there is no indication of compliance or exception shall be considered non-compliant.

Contractor shall submit Compliance Matrix with the Bid Proposal AND at the time of Product Data submittal (as indicated previously in this specification) so that a complete system submittal reviewed can be performed. Contractor shall use the following template to create a full Compliance Matrix for each specification section including Parts 1, 2 and 3.

SECTION 27 05 36 - CABLE TRAYS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Product Appendix: Refer to Appendix 1, Equipment Schedules, at the end of this section, for specific product information on the benchmark products. These equipment schedules should be the baseline for product data submittals but are not intended to be an all-encompassing bill of materials, unless noted otherwise.

B. Refer to Section 27 05 00 (Part 1 and Part 3) for requirements that shall be fulfilled as part of this specification section.

C. General provisions of Contract, including General and Supplementary Conditions and Division 1 Specification sections.

D. Architectural, Electrical, and Technology Drawings. Other systems drawings may apply.

E. Division 26 Specifications. Coordinate Electrical System requirements. Basic Electrical Materials and Methods sections apply to work of this section.

F. Rough carpentry is specified in a Division 6 section.

1.2 SUMMARY

A. Extent of cable tray system work is indicated by drawings. Cable trays are defined to include, but not limited to, supports, straight sections, reducers, bends, tees, crosses, elbows, covers, dividers and other applicable accessories.

B. Types of cable tray systems required for project include the following:

1. Wire Basket type.
2. Horizontal and Vertical cable runway routed within Communications Rooms is specified in specification section 27 11 00.

1.3 SUBMITTALS

A. General Description and Requirements

1. Refer to Section 27 05 00 for requirements that shall be fulfilled as part of this specification section.

B. Product Data:

1. Refer to Section 27 05 00 for requirements that shall be fulfilled as part of this specification section.

C. Shop Drawings and As-Built Drawings shall include:

1. Floor Plans: Provide scaled building floor plan drawings (with current reflected ceiling plan layer shown) based on architectural background indicating installation of cable tray systems and accessories including clamps, brackets, hanger rods, splice plate connectors, expansion joint assemblies and fittings. Plans shall show accurately scaled components, mounting heights/elevations, and spatial relationships (clearances) to adjacent structure and equipment, including but not limited to, HVAC ductwork, piping, and light fixtures. Shop drawings shall clearly indicate areas with cable tray clearance limitations and/or other cable access limitations for review and approval by Owner, Architect, and Engineer.
2. Details: Submit cable tray support detail drawings indicating installation of cable tray systems and accessories including clamps, brackets, hanger rods, splice plate connectors, expansion joint assemblies and fittings, and all grounding components.
3. Documentation: Provide submittals and documentation as required by the project manual (in addition to electronic copies) for review or as indicated in Division 1 general conditions.

PART 2 - SYSTEM REQUIREMENTS

2.1 CABLE TRAY SECTIONS AND COMPONENTS

A. General: Except as otherwise indicated, provide metal cable trays, of types, classes and sizes indicated; with splice plates, bolts, nuts and washers for connecting units; capable of supporting concentrated loads at any given point and maximum deflection of 1-inch (25mm) at full cable load, also indicated below. Construct units with rounded edges and smooth surfaces; in compliance with applicable standards; and with the following additional construction features:

1. Wire Basket Type

a. Tray Material: ASTM A510 high strength steel wires.
b. Cross Rungs: Standard 2-inch (50mm) x 4-inch (100mm) wire mesh pattern.
c. Bends and Fittings: 24-inch (600mm) minimum radius.
d. Construction: Steel wire side flanges and rounded wire ends. Carbon Steel ASTM A510 Grade 1008.
e. Tray Finish: ASTM B633 Electrozinc (Interior Locations).
f. Lengths shall not exceed 10’-0” (3.0m).
g. Loading Criteria: Cable tray supports shall be provided per manufacturer recommendations to meet the following minimum loads:

1) Point Load Rating: 50-lb (0.23 kN) at any given point.
2) Continuous Load Rating: 50-lb/ft (0.75 kN/m).

h. Supports: Cable tray supports shall be provided for each section and/or fitting and shall comply with NEMA VE-2 installation guidelines for maximum distance from support to the end of each section and/or fitting. Aircraft cable shall not be permitted as a means of supporting cable tray. Additionally, cable tray shall not be supported with center mount trapeze supports.

2.2 CABLE TRAY ACCESSORIES

A. Provide all necessary cable tray accessories as per manufacturer recommendations including, but not limited to, items described below and or indicated within cable tray details.

B. Provide all grounding and bonding components including, but not limited to, conductors, jumpers, clamps, etc. as recommended by cable tray manufacturer in order to maintain electrical continuity in the cable tray system.

C. Provide dropouts (waterfalls), conduit adapters, hold-down devices and blind ends, as indicated, and as recommended by cable tray manufacturer. Dropouts shall be provided for all cable tray segments that provide a vertical cable transition point (i.e., where cable tray dead-ends into a Communications Room, transitions to vertical cable tray, transitions to horizontal cable tray at a different elevation, etc.).

D. Provide pull-strings through any cable tray segment that has limited clearance accessibility, to ensure cables can be installed. Pull-strings shall be provided for each section when cable tray dividers are provided.

E. Provide divider strips constructed of metals and finishes which mate and match cable trays as noted. As a minimum, provide two (2) divider strips for all cable tray segments, unless cable tray details indicate more than two.

F. Provide cable tray covers (where applicable per drawings) constructed of metals and finishes which mate and match cable trays as noted.

2.3 SUPPORTS AND CONNECTORS

A. Provide all necessary cable tray support mechanisms as per manufacturer recommendations including, but not limited to, items described below and or indicated within cable tray details.

B. Provide cable tray supports and connectors as indicated within cable tray details, including but not limited to, uni-strut, trapeze mount threaded robs, wall mounted cantilever brackets, threaded rod protective sleeves, bonding jumpers, etc.

2.4 FIRESTOPPING - UL 1489

A. Provide firestopping pillows and/or bricks as required in all cable tray openings to maintain rating of the wall. Fireproofing shall consist of ready to use, intumescent fibrous material enclosed in a strong polyethylene envelope. Contractor shall assume this is to be included in the cable tray scope of work, unless directed otherwise by the Construction Manager and/or General Contractor.

PART 3 - EXECUTION

3.1 INSTALLATION OF CABLE TRAY SYSTEMS

A. Install cable trays in accordance with equipment manufacturer’s written instructions, and with recognized industry practices, to ensure that cable tray equipment complies with requirements. Comply with requirements of NEC 392, and applicable portions of NFPA 70B and NECA’s “Standard of Installation” pertaining to general electrical installation practices.

B. All walls where cable tray is installed with wall mounted brackets shall be internally reinforced as necessary at all bracket locations to support cable tray loads. Contractor shall coordinate this with the applicable trades in addition to the Architect and Engineer, prior to installing supports and/or cable tray at these locations.

C. Labeling:

1. The final labeling scheme shall be coordinated with Owner, Architect, and Engineer prior to finalizing and initiating any work. A sample scheme shall be submitted for approval.
2. Refer to Specification Section 27 05 00 for additional requirements that shall be fulfilled as part of this specification section.

D. Coordinate with other low voltage, electrical, and mechanical work as necessary to properly interface installation of cable tray work with other work.

E. Accessibility Clearances: Coordinate and provide cable tray clearances as indicated within the cable tray details and these specifications, to allow for appropriate accessibility for initial and future cable installation. Coordinate location of cable trays with all other trades to ensure clearances are obtained. For any instances where field conditions do not allow for the minimum clearances, the Contractor shall notify the Architect and Engineer so that an acceptable solution can be coordinated.

1. 18-24” W x 4” D Wire Basket Tray (Minimum Clearances):

   a. Side Access: 24” clearance on one side
   b. Top Access: 8” clearance above tray for continuous segments.

2. 8-12” W x 4” D Wire Basket Tray (Minimum Clearances):

   a. Side Access: 18” clearance on one side
   b. Top Access: 6” clearance above tray for continuous segments.

3. Exceptions: Cable tray segments may have limited clearances at intermittent crossings with structure or MEP systems. The following guidelines shall apply for such cases, provided there is clear access at both sides/ends of the conflict zone:

   a. For areas where conflict zones span up to an 8’-0” segment of tray, clearances of 6” between the top of the cable tray rail and the structural or MEP system will be permitted
   b. For areas where conflict zones consist of a beam, duct, conduits, or pipes crossing over a short segment of tray (3’-0” or less), clearances of 2-3” between the top of the cable tray rail and the structural or MEP system will be permitted.
   c. All other major cable tray conflict zones which may prevent the Contractor from maintaining appropriate cable tray clearances shall be reviewed with the Owner, Architect, and Engineer during the submittal process.

F. Electrical Clearances: Telecommunications raceway shall be routed to maintain appropriate clearances from potential interfering electrical sources per NEC, TIA, and BICSI requirements. Provided below are minimum clearance requirements of key components that shall be maintained.

1. 120V Power Conduits: 6-inches (150mm)
2. 208V and Higher Power: 12-inches (300mm)
3. Lighting System: 12-inches (300mm)
4. Transformers: 48-inches (1200mm)

5. Motors and Fans: 48-inches (1200mm)
6. Other Interfering Sources to be field verified and coordinated by Contractor with Architect and Engineer.

G. Cable Tray Grounding:

1. Ground cable trays according to NFPA 70 unless additional grounding is specified. Comply with requirements in Section 27 05 26.
2. Cable trays with powder-coat paint should have coating mask completely removed at factory supplied grounding locations and be spliced with listed connectors per manufacturer recommendation.
3. Electrically ground cable trays and ensure continuous electrical conductivity of cable tray system in accordance with manufactures instructions. Provide maximum of 1.0 ohms resistance to building ground connection. Provide equipment grounding connections, sufficiently tight to assure a permanent and effective ground.

H. Support cable tray per manufacturer recommendations to accommodate the loading criteria as indicated within this specification.

I. Provide UL listed “Firestopping” for all cable tray penetrations through fire rated walls and slabs according to Division 07 Section “Penetration Firestopping”. Install E90 certified cable tray for critical circuits, hallways, or in areas of egress as shown in drawings. Refer to Division 07 for additional requirements.

J. Wall openings that cable tray passes through that don’t require Firestopping per code shall be stopped or sealed to maintain the building envelope and/or acoustical requirements. Refer to architectural floor plans, details and specifications for additional requirements.

K. Remove burrs and sharp edges of cable trays, wherever these could possibly be injurious to wiring insulation or jacketing.

3.2 TESTING

A. Test cable trays to ensure electrical continuity of bonding and grounding connections, and to demonstrate compliance with specified maximum grounding resistance. Submit results to Engineer for approval.

3.3 WARNING SIGNS

A. After installation of cable trays is completed, install warning signs, either on or in proximity of cable trays, where easily seen by occupants of space, and indicating warning with following wording, “WARNING! NOT TO BE USED AS WALKWAY.” Provide 1-1/2”-high yellow lettering on black background, of style selected by Architect/Engineer. Temporary signage shall be installed during installation to notify other contractors that the tray shouldn’t be used as a walkway.

END OF SECTION

APPENDIX 1 - EQUIPMENT SCHEDULE

General Notes:
1. This specification is intended to be performance based, with the expectation that an “end-to-end” solution is provided by one of the “pre-approved” manufacturers (or partnerships) listed below.
2. Products listed below are intended to establish “benchmark” products from one or more of the “pre-approved manufacturers”. The listed benchmark products shall be used as a baseline when submitting products from a pre-approved manufacturer that does not have specific products listed.
3. Pre-approved manufacturers (listed in alphabetical order) include:
   a. Cablofil Legrand
   b. Hilti

Table 1 - Cable Tray (Wire Basket Type)			
Item	**Part Name/Description**	**Manufacturer**	**Part Number**
1	Wire Basket Tray - 4" deep		
		Legrand / Cablofil	CF105/XXXEZ
2	Horizontal / Vertical Bend Fitting Kits		
		Legrand / Cablofil	CE40EZ + WASHER-EZ
3	Cable Tray Drop-Out (Waterfall), Aluminum		
		Legrand / Cablofil	CABLEXIT
4	Cable Tray Dividers, Aluminum (Straight / Flexible / etc.)		
		Legrand / Cablofil	COT105 KITPG COT150 KITPG
5	Cable Tray Grounding Components		
		Legrand / Cablofil	GNDSB
6	Miscellaneous Components (Expansion / Splice plates, etc. as applicable)		
		Legrand / Cablofil	EDRNEZ
7	Cable Tray Support Components (as applicable)		
		Legrand / Cablofil	FASP
8	Fire Wall Sleeve Kit, Ladder Tray		
		Legrand / Cablofil	YM-WPS-XX-GE
9	Flexible Firestop Block		
		Hilti	CFS-BL

APPENDIX 2 - SPECIFICATION COMPLIANCE MATRIX TEMPLATE

Indicate compliance of the proposed equipment and/or services by the word "Comply" following each paragraph number. Indicate an exception to the requirement by the word "Exception" following the applicable paragraph number. Should the proposed equipment and/or services not entirely comply with the requirements specified, but ultimately achieve the intent, the Bidder shall explain fully the extent, or lack thereof, of compliance for the applicable equipment and/or services proposed. Instances where there is no indication of compliance or exception shall be considered non-compliant.

Contractor shall submit Compliance Matrix with the Bid Proposal AND at the time of Product Data submittal (as indicated previously in this specification) so that a complete system submittal reviewed can be performed. Contractor shall use the following template to create a full Compliance Matrix for each specification section including Parts 1, 2, and 3.

	COMPLIANCE	**EXPLANATION**

SECTION 27 11 00 - COMMUNICATIONS EQUIPMENT ROOM FIT-OUT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Product Appendix: Refer to Appendix 1, Equipment Schedules, at the end of this section, for specific product information on the benchmark products. These equipment schedules should be the baseline for product data submittals but are not intended to be an all-encompassing bill of materials, unless noted otherwise.

B. Refer to Section 27 05 00 (Part 1 and Part 3) for requirements that shall be fulfilled as part of this specification section.

C. General provisions of Contract, including General and Supplementary Conditions and Division 1 Specification sections.

D. Architectural, Structural, Mechanical, Electrical, and Technology Drawings. Other systems drawings may apply.

E. Division 26 Specifications. Coordinate Electrical System requirements. Basic Electrical Materials and Methods sections apply to work of this section.

F. Division 27 Specifications. Provide requirements in all corresponding Division 27 Specifications.

G. Rough carpentry is specified in a Division 6 section.

PART 2 - SYSTEM REQUIREMENTS

2.1 COMMUNICATIONS ROOM FIT-OUT

A. Communications Backboard

1. Plywood Backboard:

a. Provide 3/4-inch (19mm) AC grade plywood back board, void-free, rigidly fixed on communications walls as noted on drawings.
b. Plywood shall be mounted “A” side out, “C” side to the wall.
c. Shall conform to UL FR-S Plywood 1780 R-7003

1) Shall be fire retardant impregnated plywood OR
2) Plywood shall be painted with fire rated intumescent paint on all sides.

d. Shall be painted to match architectural finish (white minimum), fire rated plywood must be painted with intumescent paint to maintain rating.
e. Ensure that UL listing and Fire Rating stamp are left unpainted to allow inspector to verify the rating of the plywood.
f. If the UL stamp is on the “C” side of the plywood, contractor shall document via install and material progress photographs, delivery manifests and UL listing certifications to help satisfy potential inspector comments.

B. Communications Cabinets, Racks, Frames and Enclosures

1. General

a. Provide Equipment Cabinet and Rack types and sizes as shown on Technology Drawings. Refer to specific rack types described below for additional information.
b. Cabinets and/or racks shall be completely setup and installed all locations.
c. Cabinets and/or racks shall be vertically and horizontally level.
d. Cable distribution equipment cabinets and racks shall utilize 19-inch Standard / ETSI wide rack system. Cabinet post depths shall be adjustable.
e. Rack Mounting Holes: Pre-drilled and Threaded Tap Holes (spacing and diameter) or 3/8-inch (9.5mm) Square Punch with Cage Nuts per TIA standard pattern.
f. Bonding and Grounding. All cabinets and racks shall be grounded as described within Technology Drawings and specifications.

2. Equipment Cabinets – Network, Server, and AV Type:

a. Sizes: Per Specification Appendix 1 and Technology Drawings.
b. Frame: Lightweight Solid Aluminum Extrusion, Welded with Rail Depth Markings.
c. Vertical Mounting Rails: 19” with square holes, 42U or 47U to match cabinet size.
d. PDU Mounting Hardware – Lacing Bars or brackets.
e. Vertical Cable Management for Network/Server Cabinets – 42U Cable Fingers x 4.
f. Front Door: Full Width, 80% Perforated, Hinged (reversible), Removable with Locking Handles.
g. Rear Door: Split, 80% Perforated with Locking Handles.
h. Top: Roof Panels and Cover with Side Roof Brushes for Cable Access.
i. Side Panels: Solid, Removable and Lockable.
j. Interior Air Dams with Center Airflow seal.
k. Static Load Capacity: 3500-lb.
l. Fully configured and shipped with all components including bonding and grounding.
m. Base Levelers and Floor Anchor Brackets.

3. Equipment Cabinet – Vertical Wall-Mount Type:

a. Size: Per Specification Appendix 1 and Technology Drawings.
b. Rails: 4RU Fixed with Space for Additional Rail Kits.
c. Front Door: Solid, Split, Reversible and Locking.
d. Top Brush Grommet for Cable Access.
e. Cooling: Fan Kit, 2 Fans and Mounting Hardware.
f. Load Capacity: 150-lb overall.
g. Fully configured and shipped with all components and grounding.
h. Mounting Type: Mount to Wall. Provide all necessary wall support and reinforcement.

4. Equipment Rack – 4-post Cable Distribution and Network Type:

a. Size: Per Specification Appendix 1 and Technology Drawings.
b. Rails: 45 RU, 19-inch TIA Standard, All Adjustable after Rack Fastened to Floor.
c. Integrated Top Cable Management: Front and Rear waterfalls
d. Load Capacity: 2000-lb.
e. Mounting Type: Bolted to Floor with Neoprene Isolator.

5. Equipment Racks – 2-post Cable Distribution and Network Type:

    a. Rails: 45U, 19-inch TIA Standard.
    b. Channel: 6.5” D with Honeycomb side rails.
    c. Integrated Top Cable Management: Front and Rear waterfalls.
    d. Load Capacity: 2000-lb.
    e. Mounting Type: Bolted to Floor with Neoprene Isolator.

6. Equipment Cabinets and Racks – Accessories:

    a. Provide Accessories for equipment cabinets and racks as noted on drawings or within specifications, or as required to support specified system equipment.
    b. All accessories shall be completely setup and installed at locations shown on drawings, or as required to support specified systems equipment.
    c. All accessories shall be installed per manufacturer requirements.

C. Communications Termination Blocks and Patch Panels

1. All communications cables shall be terminated unless noted otherwise.
2. Cable terminations including wall fields, blocks, and patch panels are specified with in other sections.
3. Refer to 27 13 13 – Communications Copper Backbone Cabling, 27 13 23 – Communications Optical Fiber Backbone Cabling, and 27 15 01 – Communications Horizontal Cabling for additional requirements.

D. Communications Cable Management

1. General

    a. Horizontal cable tray shall be mounted around room perimeter and above equipment racks as indicated on drawings. Tray sections shall be offset a minimum of 6-inches (150mm) clear from wall (unless otherwise noted) to allow passage of other systems up wall including risers, backbone, and other distribution.
    b. Vertical ladder rack shall be placed on wall above riser conduit locations to support tie-off of backbone cables.
    c. Cable Tray sections shall be bonded together for electrical continuity (grounding) and system bonded to telecommunications ground bus (TGB) or electrical ground bus. Ladder rack, hardware, and components shall be UL classified.
    d. Cable Tray drop-outs shall be provided above all equipment racks and/or cabinets to allow for cable transition to termination panels.

2. Cable Tray – Ladder Type

    a. Cable racking in Communications Rooms shall be ladder rack with ASTM A513 and A570 structural tubular steel complete with all required mounting hardware and with all fittings and cables needed to form a bonded (grounded).

        1) Width: Refer to Technology Drawings.
        2) Side rails: 1½-inch x 3/8-inch (150mm x 9.5mm)
        3) Rungs: 9-inches (225mm) on-center
        4) Finish: Black Powder Coat.

3. Equipment Rack Vertical Cable Management:

    a. Provide high-capacity vertical cable managers on each side and between all equipment racks for cables and patch cord management.
    b. Sizes to be provided: per specification Appendix 1 and Technology Drawings.
    c. Vertical Cable Managers shall be compatible with equipment cabinets and racks with:

        1) Wire frame and rack unit finger design for patch cord routing between rakcs.
        2) Dual hinged slam latch doors.
        3) Cable management spools to provide slack storage fiber jumpers.
        4) Bend limiting clips for fiber entering vertical manager.

4. Equipment Cabinet/Rack Horizontal Cable Managers:

    a. Backbone and Horizontal patch panel cable managers: Provide 2U horizontal cable managers above, below, and between patch panels and data network switches for cables and patch cord management as shown in Technology Drawings.
    b. Cable Managers shall be compatible with equipment Cabinets and racks.
    c. Coordinate with the Owner to confirm the exact placement of these cable managers in the equipment racks.

5. Wall Field Cable Managers:

    a. Jumper troughs and cable managers shall be provided along each side and between wall fields or any other wall mounted cable terminals or patch panels. This is to provide adequate support of cables interconnecting wall fields or other wall mounted cable terminals.

6. D-Rings:

    a. D-Rings or equivalent means shall be provided as necessary on backboard to support any horizontal and vertical cables not supported by cable tray or other means.
    b. Spacing shall not exceed 24-inches (600mm) or cable manufacturer’s recommendation, whichever is less.

E. Communication Rack Mounted Power Protection and Power Strips

1. Rack Mounted Uninterruptible Power Systems (UPS)

    a. Dedicated “spot” UPS units will be mounted within cabinets and/or racks for communications rooms not fed by centralized UPS units.
    b. Unless noted otherwise on Technology Drawings or in another Division 27 specification section, cabinet and/or rack mounted UPS units and mounting hardware are provided by Owner and noted here for reference only.

2. Vertical Power Strips – Power Distribution Units (PDUs)

    a. Each equipment cabinet shall be installed with vertical power strips (PDUs) that have multiple power outlets to connect equipment within cabinet.
    b. Power strips shall have a cord with plug and shall be connected to specific receptacles on dedicated circuits.

c. Power strips shall be connected to different power sources or UPS wherever possible.
d. Mounting brackets shall be installed according to cabinet and/or power strip manufacturer recommendations to properly mount power strips within cabinet.
e. Unless noted otherwise on Technology Drawings or in another Division 27 specification section, cabinet and/or rack mounted power strips and mounting brackets are provided by Owner and noted here for reference only.

3. Horizontal Power Strips – Power Distribution Units (PDUs)

a. A minimum of (1) horizontal power strip shall be provided for each equipment rack location.
b. Power strips shall have a cord with a plug and shall be connected to specific receptacles on dedicated circuits.
c. Unless noted otherwise on Technology Drawings or in another Division 27 specification section, cabinet and/or rack mounted power strips and mounting brackets are provided by Owner and noted here for reference only.

F. Telecommunications Grounding Busbar (TGB)

1. Each Communications Room shall be installed with a dedicated telecommunications ground bus bar (TGB) and bonded to the telecommunications bonding backbone (TBB).
2. Each Equipment Cabinet, Equipment Rack, Ladder Rack or Wire Basket Tray, Conduit Sleeves, and other metallic components etc. shall be individually bonded and grounded to TGB. Overhead Ladder Rack or Basket Tray may have a single grounding connection to the ground bus bar, but shall have grounding jumpers provided between each segment (as required) for tray that does not have connectors which are UL listed for grounding.
3. Refer to Section 27 05 26 – Telecommunications Grounding and Bonding for additional requirements.

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION

A. Refer to Section 27 05 00 for requirements that shall be fulfilled as part of this specification section.

B. Equipment Cabinet and/or Rack Installation:

1. Cabinets and racks shall be vertically and horizontally level.
2. Provide a junction plate at top of equipment rack and required cable runway to attach rack to cable runway around the perimeter of the Communications room. Junction plate must be fastened to frame without using “J”-hooks so that no equipment space is lost.
3. The completed equipment rack will be affixed to the floor using drop-in anchors and 5/8-inch zinc-plated hex bolts, split and flat washers.
4. All equipment and components noted in this section and drawings shall be provided and completely setup and installed. This includes but not limited to Cabinets and Racks, Cable Management and Ladder Rack, Communication Wall Fields and Patch Panels, and Communications Rack Mounted Power Protection and Power Strips.
5. All ladder cable runway shall be securely anchored to the walls (both ends) with support kits and brackets as specified by manufacturer and supported overhead at intervals by trapeze supported channel and rebar in PVC tubing.

6. All new cables shall be supported using overhead ladder rack, D- rings, and cable management hardware and shall be neatly dressed-out in the TRs.
7. All equipment shall be generally installed per drawings and field coordinated with current conditions and other trades. The final locations shall be coordinated with Owner, Architect, and Engineer prior to installation. No additional cost submitted by contractor shall be incurred by Owner due to Contractor's failure to comply with this requirement.

C. Drip Pans:

1. Drip Pans: Where possible to run mechanical, plumbing, fire suppression or similar "wet" piping elsewhere, do not run piping directly above technology work which is sensitive to moisture. If no other options exist and after confirmation review with Engineer and Owner, provide drip pans under all piping, sufficient to protect technology work from dripping.
2. Locate pan immediately below piping and extend a minimum of 6" on each side of piping and lengthwise 18" beyond equipment being protected.
3. Fabricate pans 2" deep of reinforced sheet metal with rolled edges and soldered or welded seams; 22 gauge galvanized steel. Provide 3/4" copper drainage piping from pan to nearest floor drain or similar suitable point of discharge and terminate pipe as an open-sight drainage connection.
4. Coordinate work with MEP Contractor.
5. Insulate bottom of pan and drainage pipe as directed by Engineer.

D. Labeling:

1. The final labeling scheme shall be coordinated with Owner, Architect, and Engineer prior to finalizing and initiating any work. A sample scheme shall be submitted for approval.
2. Refer to Specification Section 27 05 00 for additional requirements that shall be fulfilled as part of this specification section.

END OF SECTION

APPENDIX 1 - EQUIPMENT SCHEDULE

General Notes:
1. This specification is intended to be performance based, with the expectation that an “end-to-end” solution is provided by one of the “pre-approved” manufacturers (or partnerships) listed below.
2. Products listed below are intended to establish “benchmark” products from one or more of the “pre-approved manufacturers”. The listed benchmark products shall be used as a baseline when submitting products from a pre-approved manufacturer that does not have specific products listed.
3. Pre-approved manufacturers (listed in alphabetical order) include:
   a. Legrand / Ortronics

Table 1 - Equipment Cabinets, Racks, and Accessories			
Item	**Part Name/Description**	**Manufacturer**	**Part Number**
1	42U - Cabinet with Accessories for MDF (800mm W x 1200mm D) - Black for Judiciary With Side Panels and Door Swing as Indicated on Drawings

APPENDIX 2 - SPECIFICATION COMPLIANCE MATRIX TEMPLATE

Indicate compliance of the proposed equipment and/or services by the word "Comply" following each paragraph number. Indicate an exception to the requirement by the word "Exception" following the applicable paragraph number. Should the proposed equipment and/or services not entirely comply with the requirements specified, but ultimately achieve the intent, the Bidder shall explain fully the extent, or lack thereof, of compliance for the applicable equipment and/or services proposed. Instances where there is no indication of compliance or exception shall be considered non-compliant.

Contractor shall submit Compliance Matrix with the Bid Proposal AND at the time of Product Data submittal (as indicated previously in this specification) so that a complete system submittal reviewed can be performed. Contractor shall use the following template to create a full Compliance Matrix for each specification section including Parts 1, 2 and 3.

	COMPLIANCE	**EXPLANATION**

SECTION 27 13 13 - COMMUNICATIONS COPPER BACKBONE CABLING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Product Appendix: Refer to Appendix 1, Equipment Schedules, at the end of this section, for specific product information on the benchmark products. These equipment schedules should be the baseline for product data submittals but are not intended to be an all-encompassing bill of materials, unless noted otherwise.

B. Refer to Section 27 05 00 (Part 1 and Part 3) for requirements that shall be fulfilled as part of this specification section.

C. General provisions of Contract, including General and Supplementary Conditions and Division 1 Specification sections.

D. Architectural, Electrical, and Technology Drawings. Other systems drawings may apply.

E. Division 26 Specifications. Coordinate Electrical System requirements. Basic Electrical Materials and Methods sections apply to work of this section.

F. Division 27 Specifications. Provide requirements in all corresponding Division 27 Specifications.

G. Rough carpentry is specified in a Division 6 section.

PART 2 - SYSTEM REQUIREMENTS

2.1 COMMUNICATIONS COPPER CABLING SYSTEM

A. Topology:

1. The Communications Copper Backbone Cabling will be an industry standard physical star topology with high pair count copper cabling interconnecting each Intermediate Cross-connect (IC) to the Copper Main Cross-Connect (MC) location, unless noted otherwise.
2. For conditions where backbone cable is provided to non-communication room locations, all cabling topology shall follow the same requirements and originate from the MC unless noted otherwise.
3. All cable splices shall be coordinated with Owner, Architect, and Engineer. This includes those shown on drawings and/or proposed by Contractor.
4. Cable splices are only acceptable as noted on the drawings and must be approved by Owner, Architect, and Engineer.
5. Cable splices are only intended where differing cable types are joined and/or multiple smaller cables are joined to larger backbone feeder cables.
6. Splices are not acceptable to extend cables of inadequate length.
7. Cables from different low voltage systems (ex. 70v Speaker, BMS, etc.) shall not be run in the same conduit pathways with copper backbone cabling unless specifically noted on the drawings.
8. Refer to drawings for additional requirements.

B. General Requirements

1. All cable and terminations shall meet the minimum Performance and Criteria listed in specification below and on drawings, in accordance with TIA-568-C.2.
2. Cable requirements including cable types, quantities and pair / strand counts are specified on the drawings.
3. All cables shall have the appropriate fire spread rating per building codes, industry standard, and Underwriters Laboratory (UL/cUL) including plenum (CMP/OFNP/OFCP), riser (CMR/OFNR/OFCR), etc. The contractor shall verify the appropriate cable is being used for application it is installed.
4. Any cable routed below grade shall utilize specific water block construction. Copper cables generally use gel-filled compound to achieve this rating. The contractor is required to submit a solution wherever this condition exists regardless of whether noted on drawings.
5. Underground rated cable that doesn't carry a suitable indoor building cable rating per building code and UL, shall not be routed more than 50-ft (15m) inside the building. Cable shall be spliced or terminated as appropriate and noted on drawings.
6. All armored and/or metallic cable sheaths shall be bonded to Telecommunications Ground Bus (TGB).

C. Performance and Criteria

1. General Copper Backbone Cabling Requirements: (as applicable per drawings)

a. Cable Rating:

1) Riser Rated (CMR) when installed in non-plenum spaces as determined by Authority Having Jurisdictions (AHJ).

b. Cable Construction:

1) Construction: Unshielded Twisted Pair
2) Medium: Solid Annealed Copper

c. Length Limitations: 2600-feet (800m) for telecommunications
d. Physical Specification:

1) Standard Cable Sizes: 25-pair per one-line drawings.
2) Conductor Size: 24 AWG

e. Compliances: Refer to respective cable types in section 2.2.
f. Electrical Specifications:

1) Characteristic Impedance: 100 Ohms
2) Cat 3 Frequency: 1-16 MHz
3) Cat 5 Frequency: 1-100 MHz

g. Temperature:

1) CMR Operating and storage: -4 to +140ºF (-10 to +60ºC)

h. Pulling Tensions (max): 25-lb (11 kg).
i. Transmission Performance: TIA Cat 3 or higher

2.2 CABLE REQUIREMENTS

A. General

1. The cables shall meet the minimum requirements noted in Performance and Criteria Section for each respective cable type based on TIA-568-C.2 equivalent cable rating.
2. Refer to Technology Drawings for all cable types, quantities and pair / strand counts.

B. Cat. 3 or Higher Riser Rated – Telecommunications Cables

1. Application: Building backbone and riser installation within duct, conduits or cable trays telecommunications backbone cable.
2. Construction:

a. Insulation: Flame retardant semi-rigid PVC.
b. Shield/Sheath: None.
c. Filling Compound: None.
d. Jacket: Flame retardant PVC.

3. Color: Gray.
4. Compliances: TIA-568-C.2, NEC/CEC Type CMR

2.3 TERMINATION REQUIREMENTS

A. General

1. Wiring terminals shall meet the minimum requirements noted in Performance and Criteria Section for each respective cable type, based on TIA-568-C.2 equivalent cable ratings.
2. Provide all necessary wiring terminals, jumper troughs, protector panel, ground wire and bonding to building ground, and plug in protectors (as applicable).
3. Temperature rating (unless noted otherwise):

a. Operating: +14 to +140ºF (-10 to +60ºC).
b. Storage: -40 to +158ºF (-40 to +70ºC).

B. Punchdown / RJ45-Type Patch Panel

1. General:

a. This wiring terminal shall meet the minimum requirements noted in Performance and Criteria Section for Category 5E.
b. Provide all necessary wiring terminals, horizontal cable manager, protector panel, ground wire and bonding to building ground, and plug in protectors.
c. Provide double-sided horizontal cable manager above and/or below patch panels as indicated on Technology Drawings (Rack Elevations).
d. Terminate pairs on patch panel per general notes on Technology Drawings (Copper Backbone One-line). Exact requirements shall be coordinated and approved with Owner, Architect, and Engineer prior to initiating any work.
e. Specific communication device and outlet types shall be grouped together on patch panel plus 20% spare jacks be added within grouping.

2. Type: Punchdown / RJ45-Type.
3. Mounting Configuration: 19-inch Rack mounted in Telecom Rooms (TRs)
4. Size: 24-port or 48-port (provide as required to terminate all cable).

5. Cable Interface:

    a. Input: 110-Type (back).
    b. Output: RJ45-Type (front).

6. Electrical Specifications:

    a. TIA-568-C.2: Category 3 or 5e to match cable type.
    b. Insulation Resistance: 500 MegaOhms (minimum).
    c. Current Rating: 1.5A @ 68ºF (20ºC).
    d. Dielectric Withstand Voltage: 1000 VAC RMS, 60Hz (minimum), contact-to-contact and 1,500 VAC RMS, 60Hz (minimum) to exposed conductive surface.
    e. UL and cUL Listed
    f. FCC Part 68

7. Plug Requirements:

    a. Retention Force: 30-lb (133N).
    b. Insertion Life: 750 minimum.
    c. Plug/Jack Contact Force: 0.22-lb (100g).

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION

A. Refer to Section 27 05 00 for requirements that shall be fulfilled as part of this specification section.

B. Labeling:

1. The final labeling scheme shall be coordinated with Owner, Architect, and Engineer prior to finalizing and initiating any work. A sample scheme shall be submitted for approval.
2. Each cable, patch panel, and termination shall be identified at the Main Cross-connect (MC), at the Intermediate Cross-connect (IC), and at each station termination.
3. Refer to Specification Section 27 05 00 for additional requirements that shall be fulfilled as part of this specification section.

C. Telecommunications Testing:

1. All communications copper backbone cabling and pairs shall be tested for electrical continuity and wire map.
2. All cabling will be test/certified for conformance to the TIA-568-C.2 Category 3 and Category 5 specifications (as applicable) using Level 2 test equipment in accordance with TIA-568-C.2.
3. Cable tests will be per industry standard and also include the following:

    a. Cable Length
    b. Attenuation
    c. NEXT
    d. Characteristic Impedance
    e. Mutual Capacitance
    f. Resistance
    g. Noise

h. Wire Map

4. Electronic test results shall be submitted by the Contractor for approval by Owner, Architect, and Engineer.

END OF SECTION

APPENDIX 1 - EQUIPMENT SCHEDULE

General Notes:
1. This specification is intended to be performance based, with the expectation that an “end-to-end” solution is provided by one of the “pre-approved” manufacturers (or partnerships) listed below.
2. Products listed below are intended to establish “benchmark” products from one or more of the “pre-approved manufacturers”. The listed benchmark products shall be used as a baseline when submitting products from a pre-approved manufacturer that does not have specific products listed.
3. Pre-approved manufacturers (listed in alphabetical order) include:
   a. Legrand / Ortronics
   b. Superior Essex

Table 1 - Copper Backbone Cable / Connectivity Products			
Item	**Part Name/Description**	**Manufacturer**	**Part Number**
1	25-pair Category 3 - Riser Rated Cable		
		Superior Essex	18-475-33 or 18-499-33
2	Category 5E RJ45 / 110-Punch Patch Panel (24-port)		
		Legrand / Ortronics	PHD5E6U24
3	Category 5E RJ45 / 110-Punch Patch Panel (48-port)		
		Legrand / Ortronics	PHD5E6U48

APPENDIX 2 - SPECIFICATION COMPLIANCE MATRIX TEMPLATE

Indicate compliance of the proposed equipment and/or services by the word "Comply" following each paragraph number. Indicate an exception to the requirement by the word "Exception" following the applicable paragraph number. Should the proposed equipment and/or services not entirely comply with the requirements specified, but ultimately achieve the intent, the Bidder shall explain fully the extent, or lack thereof, of compliance for the applicable equipment and/or services proposed. Instances where there is no indication of compliance or exception shall be considered non-compliant.

Contractor shall submit Compliance Matrix with the Bid Proposal AND at the time of Product Data submittal (as indicated previously in this specification) so that a complete system submittal reviewed can be performed. Contractor shall use the following template to create a full Compliance Matrix for each specification section including Parts 1, 2, and 3.

SECTION 27 13 23 - COMMUNICATIONS OPTICAL FIBER BACKBONE CABLING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Product Appendix: Refer to Appendix 1, Equipment Schedules, at the end of this section, for specific product information on the benchmark products. These equipment schedules should be the baseline for product data submittals but are not intended to be an all-encompassing bill of materials, unless noted otherwise.

B. Refer to Section 27 05 00 (Part 1 and Part 3) for requirements that shall be fulfilled as part of this specification section.

C. General provisions of Contract, including General and Supplementary Conditions and Division 1 Specification sections.

D. Architectural, Electrical, and Technology Drawings. Other systems drawings may apply.

E. Division 26 Specifications. Coordinate Electrical System requirements. Basic Electrical Materials and Methods sections apply to work of this section.

F. Division 27 Specifications. Provide requirements in all corresponding Division 27 Specifications.

G. Rough carpentry is specified in a Division 6 section.

PART 2 - SYSTEM REQUIREMENTS

2.1 COMMUNICATIONS OPTICAL FIBER BACKBONE CABLING SYSTEM

A. Topology:

1. The Optical Fiber Backbone Cabling will be an industry standard physical star topology with fiber optic cabling interconnecting each Intermediate Cross-connect (IC) to the Fiber Optic Main Cross-Connect (MC) location, unless noted otherwise.
2. For conditions where backbone cable is provided to non-communication room locations such as Remote Hub locations, all cabling topology shall follow the same requirements and originate from the MC unless noted otherwise.
3. Cable splices are only acceptable as noted on the drawings and must be approved by Owner, Architect, and Engineer.
4. Cable splices are only intended where differing cable types are joined and/or multiple smaller cables are joined to larger backbone feeder cables.
5. Splices are not acceptable to extend cables of inadequate cable lengths.
6. Refer to drawings for additional requirements.

B. General Requirements:

1. All cable and terminations shall meet the minimum Performance and Criteria listed in specification below and on drawings, in accordance with TIA-568-C.3.
2. Cable requirements including cable types, quantities and pair / strand counts are specified on the drawings.
3. All cables shall have the appropriate fire spread rating per building codes, industry standard, and Underwriters Laboratory (UL/cUL) including plenum (CMP/OFNP/OFCP), riser (CMR/OFNR/OFCR), etc. The contractor shall verify the appropriate cable is being used for application it is installed.
4. Any cable routed below grade shall utilize specific water block construction. Fiber optic cables can use dry water block tape or gel-filled compound to achieve this rating. The contractor is required to submit a solution wherever this condition exists regardless of whether noted on drawings.
5. Underground rated cable that doesn't carry a suitable indoor building cable rating per building code and UL, shall not be routed more than 50-ft (15m) inside the building. Cable shall be spliced or terminated as appropriate and noted on drawings.
6. Approved splices shall be low attenuation fusion type.
7. All armored and/or metallic cable sheaths shall be bonded to Telecommunications Ground Bus (TGB).
8. Fiber terminations shall swap transmit/receive polarity on far end of cable per industry standards for all mated or duplex connectors. This requirement shall be coordinated with Owner and Facility Operator.
9. Service loops shall be provided at each end of cable at the termination point.
10. Provide breakout or fan-out kits for all loose type fiber optic cables for transitioning to tight buffered cable at termination points.

C. Performance and Criteria:

1. General Fiber Backbone Cabling Requirements: (as applicable per drawings)

   a. Cable Rating:

      1) Riser Rated (CMR) when installed in non-plenum spaces as determined by Authority Having Jurisdictions (AHJ).

   b. Cable Construction:

      1) Construction: Interlocking Armored

   c. Length Limitations: Refer to tables below.
   d. Physical Specification:

      1) Strand Counts: 6, 12, and 24 as indicated on drawings.
      2) Multi-mode Core Diameter: 50-Micron
      3) Single-mode Core Diameter: 8-Micron
      4) Cladding Diameter: 125-Micron

   e. Compliances: Refer to respective cable types in section 2.2.
   f. Temperature:

      1) CMR Operating and storage: -4 to +140ºF (-10 to +60ºC)

g. Bend Radius (Minimum):

1) Installation: 20X Outside Cable Diameter.
2) Operating: 10X Outside Cable Diameter.

h. Pulling Tensions (max): 25-lb (11 kg).
i. Transmission Performance (min.)

1) Refer to tables below for each applicable cable type.

2. 50.0 – Micron Multi-Mode 550 (OM4)

a. Transmission Performance:

50.0 - MICRON MULTI-MODE (OM4)						
Wavelength	**Maximum**	**Bandwidth**	**Supported Ethernet Length**			
	Attenuation	**(MHz-km)**	**10 Mbps**	**100 Mbps**	**1 Gbps**	**10Gbps**
850 nm	3.5 dB/km	4700 MHz-km	980-feet (300m)	980-feet (300m)	3600-feet (1100m)	1800-feet (550m)
1300 nm	1.5 dB/km	500 MHz-km	6560-feet (2000m)	6560-feet (2000m)	1960-feet (600m)	980-feet (300m)

3. 8.3 – Micron Single-Mode (OS2)

a. Fiber Category G.652.D/G.657.A1
b. Maximum Attenuation 0.4 dB/km / 0.4 dB/km / 0.4 dB/km
c. Wavelengths 1310 nm / 1383 nm / 1550 nm

2.2 CABLING

A. General

1. This cable shall meet the minimum requirements noted in Performance and Criteria Section for each respective cable type based on ANSI/TIA/EIA-568-C.3 equivalent cable rating.
2. Refer to Technology Drawings for all cable types, quantities and pair / strand counts.

B. Interlocking Armored Building Cables

1. Riser Rated (CMR / OFCR)

a. Application:

1) Building Cable is intended for interior building backbone and riser distribution installation within duct, conduits, and/or cable tray.

b. Construction:

1) Jacket: Flame Retardant, Riser Rated, (CMR / OFCR)
2) Fiber Buffer: Tight Buffered, 900-micron.
3) Armor: Interlocking Aluminum.
4) Strength Member: Aramid Strength Yarn.
5) Water Block/Filling Compound: None.

c. Compliances:

1) ANSI/TIA/EIA-568-C.3
2) NEC/CEC Type CMR / OFCR.

2.3 TERMINATION EQUIPMENT

A. General

1. Fiber terminations shall meet the minimum requirements noted in Performance and Criteria Section for each respective cable type, based on ANSI/TIA/EIA-568-C.3 equivalent cable ratings.
2. Provide all necessary fiber enclosures, splice trays, and connectors (as applicable). Refer to Technology Drawings for additional information.

B. Termination Type Requirements

1. Benchmark: Provide pre-terminated fiber module with pigtail for fusion splicing, mounted within splice tray.
2. Alternate Options: Contractor may elect to provide alternate pricing for consideration (but at the sole discretion of Owner and Engineer) for either of the following options:

a. Pre-polished, field terminated connectors with adapter pack (i.e., bulk heads)
b. Field-polished, field terminated connectors with adapter pack (i.e., bulk heads)

C. Connectors

1. General:

a. Ferrule: Ceramic
b. Fiber Buffer Size: 900-micron
c. Optical Specification:

1) Multi-mode
2) Single-mode
3) Insertion Loss (Typical / Max.): <0.3dB / <0.75dB

d. Plug Requirements:

1) Retention Force (Buffer): 2-lb (0.9kg)
2) Retention Force (Cordage): 10-lb (4.5kg)
3) Insertion Life: 500 minimum.

e. Temperature rating (operating): -40 to +167ºF (-40 to +75ºC).

2. LC-Type / UPC

a. Application / Fiber Type:

1) Multi-mode
2) Single-mode

b. Form Factor: Small Form Factor (SFF)
c. Adapter Type: Duplex or Simplex

d. Polish: Ultra Physical Contact (UPC)

3. ST-Type – For Broadcast Only

a. Application / Fiber Type:

1) Single-mode

b. Adapter Type: Simplex

D. Splice Trays

1. General:

a. Shall meet the minimum requirements noted in Performance and Criteria Section.
b. Dedicated splice trays may not be necessary as enclosures with built in splice trays may be acceptable, if submitted and accepted by Owner / Engineer.

2. Application:

a. Provide protection and slack management of heat shrink fusion spliced fibers.
b. Splice tray to be used with enclosures noted below.

3. Fiber Types supported:

a. Micron Multi-Mode (OM4)
b. Micron Single-Mode (OS2)

4. Sizes / Fiber Counts supported (per tray):

a. 12, 24 or 48 fibers

5. Construction:

a. Tray: Injected molded or metal

6. Related components to be provided (as necessary):

a. Mounting hardware kits
b. Heat shrink splice sleeve (40mm and/or 60mm lengths)

E. Enclosures

1. General:

a. Use: Enclosure for consolidating connectors and/or splicing of high-density optical fiber typically at communication distribution and equipment rooms.
b. Modular configuration to support connector modules, cassettes, or adapter panels for fiber terminations.
c. Mounting Configurations:

1) 19-inch EIA Rack. Brackets to expand to 23-inch EIA or ETSI frame.

d. Access:

1) Sliding drawer face and tray
2) Hinged Front Door with labeling card.
3) Hinged Rear Doors.
4) Removable top covers.

e. Density: High density and capable of supporting terminations and splice trays.
f. Connector Panels: Snap in type to accommodate specified connector types as required.
g. Cable Managers:

1) Internal strand managers for service loops and strand management in back side.
2) Internal patch cord manager at front side.
3) Cable access on both sides at front and back sides. Access points should have integrated curved guards to support appropriate cable bends.

2. 4U – Rack Mount Fiber Optic Housing

a. Application: Standard rack mount fiber terminations.
b. Size: 4U (rack-units)
c. Capacity:

1) LC-Connectors: 384-strands

3. 2U – Rack Mount Fiber Optic Housing

a. Application: Standard rack mount fiber terminations.
b. Size: 2U (rack-units)
c. Capacity:

1) LC-Connectors: 192-strands

4. 1U – Rack Mount Fiber Optic Housing

a. Application: Standard rack mount fiber terminations.
b. Size: 1U (rack-unit)
c. Capacity:

1) LC-Connectors: 96-strands

2.4 PATCH CORDS

A. General Requirements:

1. The patch cords shall meet the minimum requirements noted in Performance and Criteria Section for each respective cable type based on ANSI/TIA/EIA-568-C.3 equivalent cable rating.
2. Patch cords shall be provided as part of project at main cross-connects, intermediate cross-connects, and horizontal cross-connects (as applicable), unless noted otherwise.
3. All fiber optic patch cords shall be from the same manufacturer as the fiber optic backbone and shall meet all performance requirements established in earlier sections of this specification.

4. Lengths and Colors: Refer to Technology Drawings (symbol legend) for additional requirements on various patch cord lengths and/or colors.

B. Patch Cord and Termination Types:

1. When provided by Contractor, patch cords to be provided for all fiber and connector types included in project, per sections 2.1, 2.2, and 2.3 of this specification section.
2. Refer to Technology Drawings (symbol legend) for additional requirements on various patch cord types, lengths and/or colors.

2.5 MISCELLANEOUS COMPONENTS

A. Grounding Components:

1. All fiber optic cabling with metallic sheath (i.e., Interlocking Armored Fiber) shall be grounded at each end, if cable exits the room.
2. Provide armored fiber jacket grounding straps grounded to telecom grounding busbar or ladder rack (not equipment rack), per manufacturer recommendations.

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION

A. Refer to Section 27 05 00 for requirements that shall be fulfilled as part of this specification section.

B. Grounding:

1. All fiber optic cabling with metallic sheath (i.e., Interlocking Armored Fiber) shall be grounded at each end per manufacturer recommendations, if cable exits the room.
2. Refer to Telecommunications Grounding and Bonding specification section 27 05 26 for additional requirements.

C. Labeling:

1. The final labeling scheme shall be coordinated with Owner, Architect, and Engineer prior to finalizing and initiating any work. A sample scheme shall be submitted for approval.
2. Each cable, termination panel, and termination shall be identified at the Main Cross-connect (MC), at the Intermediate Cross-connect (IC), and at each station termination.
3. Refer to Specification Section 27 05 00 for additional requirements that shall be fulfilled as part of this specification section.

D. Fiber Optic Testing/Certification (Passive)-EIA/TIA-526-14

1. Multi-mode Fiber:

a. All fiber optics will be tested for end-to-end attenuation at 850nm and 1300nm; using an optical power source and an optical power meter.
b. Tests will be performed after connectors have been installed, and will be from jumper side of hub(s) bulkhead connector to the jumper side of the bulkhead connectors at the MC/IC fiber interconnect panel.

c. Maximum loss will not exceed manufacturers' passive cable system attenuation; adjusted for cable length connector loss.
d. Maximum connector pair loss is .5dB. Splices are not acceptable in this system.
e. Test results, including OTDR printouts, will be included in the final documentation package.
f. Contractor shall complete a fiber optic post installation report at the time of testing containing meter readings at both 850 nm and 1300 nm from both directions on each fiber. Report shall include actual loss and other pertinent data regarding the cables tested, including model and serial number of test equipment, cable part number, installed fiber length, building span loss at 850 nm and 1300 nm and date tested.
g. Span loss calculations are required on the final test sheet for loss at 850 nm and 1300 nm for multimode.

(D x L) + (C x # connectors)
D = Length; L = Loss; C = Connector loss (Max 0.75 dB)
1 ft. = 0.0003048 km.

2. Single-mode Fiber:

a. All fiber Optics will be tested for end-to-end attenuation at both 1310nm and 1550nm; using an optical power source and an optical power meter.
b. Tests will be performed after connectors have been installed, and will be from jumper side of the hub(s) bulkhead connector to the jumper side of the bulkhead connectors at the MC/IC fiber interconnect panel.
c. Maximum loss will not exceed manufacturer's passive cable system attenuation; adjusted for cable length and connector loss.
d. Maximum connector pair loss is 0.5 dB. Splices are not acceptable in this system.
e. Test results including OTDR printouts will be included in the final documentation package.
f. Contractor shall complete a fiber optic post installation report at the time of testing containing meter readings at both 1310nm and 1550nm from both directions on each fiber. Report shall include actual loss and other pertinent data regarding the cables tested, including model and serial number of test equipment, cable part number, installed fiber length, building span loss at 1310nm and 1550nm and date tested.
g. Span loss calculations are required on the final test sheet for loss at 1310nm and 1550nm for single-mode.

(D x L) + (C x # connectors)
D = Length; L = Loss; C = Connector loss (Max 0.75 dB)
1 ft. = 0.0003048 km.

END OF SECTION

APPENDIX 1 - EQUIPMENT SCHEDULE

General Notes:

1. This specification is intended to be performance based, with the expectation that an “end-to-end” solution is provided by one of the “pre-approved” manufacturers (or partnerships) listed below.
2. Products listed below are intended to establish “benchmark” products from one or more of the “pre-approved manufacturers”. The listed benchmark products shall be used as a baseline when submitting products from a pre-approved manufacturer that does not have specific products listed.
3. Pre-approved fiber/connectivity manufacturers (listed in alphabetical order) include:
   a. Corning
   b. Legrand / Ortronics
   c. Superior Essex / Ortronics

Table 1 - Fiber Optic Cable / Connectivity Products			
Item	**Part Name/Description**	**Manufacturer**	**Part Number**
1	OM4 Multi-mode (OFCR) Riser Rated Premises Cable (Armored) - 12-Strand

APPENDIX 2 - SPECIFICATION COMPLIANCE MATRIX TEMPLATE

Indicate compliance of the proposed equipment and/or services by the word "Comply" following each paragraph number. Indicate an exception to the requirement by the word "Exception" following the applicable paragraph number. Should the proposed equipment and/or services not entirely comply with the requirements specified, but ultimately achieve the intent, the Bidder shall explain fully the extent, or lack thereof, of compliance for the applicable equipment and/or services proposed. Instances where there is no indication of compliance or exception shall be considered non-compliant.

Contractor shall submit Compliance Matrix with the Bid Proposal AND at the time of Product Data submittal (as indicated previously in this specification) so that a complete system submittal reviewed can be performed. Contractor shall use the following template to create a full Compliance Matrix for each specification section including Parts 1, 2, and 3.

SECTION 27 15 00 - COMMUNICATIONS HORIZONTAL CABLING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Product Appendix: Refer to Appendix 1, Equipment Schedules, at the end of this section, for specific product information on the benchmark products. These equipment schedules should be the baseline for product data submittals but are not intended to be an all-encompassing bill of materials, unless noted otherwise.

B. Refer to Section 27 05 00 (Part 1 and Part 3) for requirements that shall be fulfilled as part of this specification section.

C. General provisions of Contract, including General and Supplementary Conditions and Division 1 Specification sections.

D. Architectural, Electrical, and Technology Drawings. Other systems drawings may apply.

E. Division 26 Specifications. Coordinate Electrical System requirements. Basic Electrical Materials and Methods sections apply to work of this section.

F. Division 27 Specifications. Provide requirements in all corresponding Division 27 Specifications.

G. Rough carpentry is specified in a Division 6 section.

PART 2 - SYSTEM REQUIREMENTS

2.1 HORIZONTAL STRUCTURED CABLING SYSTEM

A. Topology

1. The Communications Horizontal Cabling will be an industry standard physical star topology with cabling routed to each communication device outlet location from the nearest Horizontal Cross-connect (HC) location, unless noted otherwise.
2. Communications horizontal cabling shall not exceed a total cable length of 295-feet (90m) for the permanent basic link. The channel length shall not exceed 325-feet (100m) when patch cords are installed.
3. Contractor(s) responsible for providing the communications horizontal raceway and/or cabling shall ensure that the pathway and cable to each device location does not exceed 295-feet (90m) length back to the nearest HC location. Contractor shall bring any distance concerns to the attention of the Architect and Engineer during the bid process and/or at a minimum during the shop drawing process, prior to installation.
4. Contractor shall immediately notify Owner, Architect, and Engineer of any cable segment that exceeds the length limitation.
5. Refer to drawings for additional requirements.

B. General Requirements

1. All cable and terminations shall meet the minimum Performance and Criteria listed in specification below and on drawings.
2. Cable requirements including cable quantities are specified on the drawings.
3. All cables shall have the appropriate fire spread rating per building codes, industry standard, and Underwriters Laboratory (UL/cUL) including plenum (CMP/OFNP/OFCP), riser (CMR/OFNR/OFCR), etc. The contractor shall verify the appropriate cable is being used for application it is installed.
4. Any cable routed outside and/or below grade shall utilize specific water block construction. Cables generally use gel-filled compound to achieve this rating for copper cable and dry water block paper for others. The contractor is required to submit an Outdoor Rated and/or Underground Rated solution wherever this condition exists regardless of whether noted on drawings.
5. Outdoor Rated and/or Underground Rated cable that doesn't carry a suitable building cable rating per building code and UL, shall not be routed more than 50-ft (15m) inside the building. Cable shall be spliced or terminated as appropriate and noted on drawings.
6. Cabling system shall be procured from a single manufacturer that offers a complete end-to-end certified and warranted system for the TIA-568-C.2 Category noted for each system. Additionally, all products provided shall be the newest products offered by the manufacturer for the product category specified.
7. Cable splices of any kind are not acceptable for communications horizontal cabling system.
8. Cables from different low voltage systems (ex. 70v Speaker, BMS, etc.) shall not be run in the same conduit pathways unless specifically noted on the drawings.

C. Performance and Criteria

1. General Horizontal Cabling Requirements:

   a. Cable Rating:

      1) Riser Rated (CMR) or General Communications Rated (CM) when installed in non-plenum spaces as determined by Authority Having Jurisdictions (AHJ).
      2) Indoor/Outdoor Rated (all outdoor or below grade applications originating within the building).

   b. Cable Construction:

      1) Type: Unshielded Twisted Pair.
      2) Medium: Solid Annealed Copper.

   c. Length Limitations:

      1) 295-feet (90m).

   d. Physical Specification

      1) Standard Cable Sizes: 4-pairs.
      2) Conductor Size: 24 AWG.

   e. Compliances:

      1) TIA-568-C.2,

2) NEC/CEC Type CMP.

f. Electrical Specification

1) Characteristic Impedance: 100 Ohms.
2) Cat.6 Frequency: 1-250 MHz.
3) Cat.6A Frequency: 1-500 MHz.

g. Temperature:

1) CMP Operating and storage: -4 to +140ºF (-10 to +60ºC)

h. Pulling Tensions (max): 25-lb (11 kg).
i. Channel Performance: in conformance with current edition of TIA-568 for Cables, Connecting Hardware, and Patch Cables

1) Alternate Only: Category 6
2) Base: Category 6A

2.2 CABLE REQUIREMENTS

A. General

1. The cables shall meet the minimum requirements noted in Performance and Criteria Section for each respective cable type based on TIA-568-C.2 equivalent cable rating.
2. Colors:

a. Device outlets, patch panel termination labels, and patch cords may be colored to differentiate application types. Horizontal voice/data cables do not require separate colors. Refer to Technology drawings (symbol legend) for additional requirements on color coding.

B. Category 6 Riser Rated – Horizontal Cable – Alternate Only

1. General:

a. This cable shall meet the minimum requirements noted in Performance and Criteria Section for Category 6.

2. Application: Primarily for communications horizontal cable installation within duct, conduits or cable trays.
3. Construction:

a. Insulation: Flame retardant semi-rigid Fluoropolymer.
b. Shield/Sheath: None.
c. Filling Compound: None.
d. Jacket: Flame retardant PVC.

C. Category 6A Riser Rated – Horizontal Cable - Base

1. General:

a. This cable shall meet the minimum requirements noted in Performance and Criteria Section for Category 6A.

2. Application: Primarily for communications horizontal cable installation within duct, conduits or cable trays.
3. Construction:

    a. Insulation: Flame retardant semi-rigid Fluoropolymer.
    b. Shield/Sheath: None.
    c. Filling Compound: None.
    d. Jacket: Flame retardant PVC.

2.3 TERMINATION REQUIREMENTS

A. General

1. All terminations shall meet the minimum requirements noted in Performance and Criteria Section for each respective cable type based on TIA-568-C.2 equivalent cable rating.
2. All terminations for copper cables located on the face of the building or at remote locations outside of the building footprint (i.e., IP security cameras, WLAN data, etc.) shall have surge protectors at the termination point within the communications room. Contractor shall comply with manufacturer recommendations.
3. Specific and dedicated patch panels shall be used when multiple TIA-568-C.2 cable categories are used on the same project.
4. Provide all necessary wiring terminals and horizontal cable managers.
5. Provide double-sided horizontal cable manager above and below each patch panels as indicated in 27 11 00.
6. Terminate 4-pairs per RJ45 jack per T568B standard termination. Exact requirements shall be coordinated and approved with Owner, Architect, and Engineer prior to initiating any work.
7. Specific communication device outlet types shall be grouped together on patch panels. Additionally, 20% spare jacks shall be added within each grouping.

B. Modular Patch Panels (for use with RJ-45 outlets)

1. Type: Flat with Ports for Standard Modular Inserts.
2. Mounting Configuration: 19-inch Rack – Flush Mount.
3. Size: 24-port (1U) and 48-port (2U) - Provide as required to terminate all cable.
4. Built-in Strain Relief Bar
5. Colors:

    a. Patch panel outlets may require color coding to differentiate application types. Refer to Technology drawings (symbol legend) for additional requirements on color coding.

C. RJ45-Type Device Outlet Jacks

1. Transmission Performance to Match Cabling (TIA Cat 6 or 6A)
2. Type: RJ45-Type
3. Pin Configuration: T568B.
4. Mounting Configuration: Faceplates, Trim Plates, and Modular Patch Panels.
5. Colors:

    a. Jacks and/or termination labels may require color coding to differentiate application types. Refer to Technology drawings (symbol legend) for additional requirements on color coding.

6. Cable Interface:

    a. Input: 110-Type (back).
    b. Output: RJ45-Type (front).

7. Electrical Specifications:

    a. TIA-568-C.2:
    b. Insulation Resistance: 500 MegaOhms (minimum).
    c. Current Rating: 1.5A @68ºF (20ºC).
    d. Dielectric Withstand Voltage: 1000 VAC RMS, 60Hz (minimum), contact-to-contact and 1,500 VAC RMS, 60Hz (minimum) to exposed conductive surface.
    e. UL and cUL Listed
    f. FCC Part 68.

8. Plug Requirements:

    a. Retention Force: 30-lb (133N).
    b. Insertion Life: 750 minimum.
    c. Plug/Jack Contact Force: 0.22-lb (100g).

9. Temperature

    a. Operating: +14 to +140ºF (-10 to +60ºC).
    b. Storage: -40 to +158ºF (-40 to +70ºC).

D. Field Terminated RJ45 Plugs

1. Transmission Performance to Match Cabling (TIA Cat 6 or 6A)
2. Type: RJ45-Type
3. Pin Configuration: T568B.
4. Mounting Configuration: Field Terminate to plug directly into devices such as ONT, wireless access points, security cameras, etc.
5. Cable Interface:

    a. Input: 110-Type (back).
    b. Output: RJ45-Type (front).

6. Electrical Specifications:

    a. TIA-568-C.2:
    b. Insulation Resistance: 500 MegaOhms (minimum).
    c. Current Rating: 1.5A @68ºF (20ºC).
    d. Dielectric Withstand Voltage: 1000 VAC RMS, 60Hz (minimum), contact-to-contact and 1,500 VAC RMS, 60Hz (minimum) to exposed conductive surface.
    e. UL and cUL Listed
    f. FCC Part 68.

7. Plug Requirements:

    a. Retention Force: 30-lb (133N).
    b. Insertion Life: 750 minimum.
    c. Plug/Jack Contact Force: 0.22-lb (100g).

8. Temperature

    a. Operating: +14 to +140ºF (-10 to +60ºC).

9. Storage: -40 to +158ºF (-40 to +70ºC).

E. Ethernet Surge Protector

1. Type: Category 6A for data speeds up to 10GbE without signal degradation.
2. Multi-stage, hybrid design SAD and GDT for protection.
3. Mounting Configuration: Standalone, DIN Rail Mount, or Rack Mount.
4. Cable Interface: RJ45 input and output.
5. UL497B Listed.
6. IEEE PoE Standard Compliance: 802.3af, 802.3at, 802.3bt Type 3 and Type 4.
7. Electrical Specifications:

    a. Service voltage: <60V.
    b. Protection Modes: Common (All), Differential (All).
    c. Clamping Voltage Common Mode: 75 Volts.
    d. Clamping Voltage Differential Mode: 72 Volts.
    e. Power Handling: Up to 144 Watts.

F. Faceplates:

1. General:

    a. Faceplates and/or trim plates shall be provided at each communication device location as necessary to install jacks.
    b. No communication device cable and outlet jack shall be installed without a faceplate to tightly secure assembly.
    c. All unused ports shall have a blank dust cover installed. The color of each dust cover shall match the faceplate color as closely as possible, unless otherwise indicated.
    d. Faceplate and/or surface box shall be provided at modular furniture locations. Coordinate requirements with Owner, Architect, and Engineer prior to purchasing components and initiating installation.
    e. Wall telephone locations shall use a modular faceplate with standard integrated mounting knobs for installing telephone handset to wall.
    f. Coordinate faceplate requirements at specialty locations for floor boxes, surface raceway, surface mount boxes, and other locations accordingly.

2. Material: (Refer to Technology Drawing details for additional information.)

    a. Wall Devices: Plastic or Stainless Steel (where specifically required).

        1) Coordinate final color and material selection of wall faceplates with Architect and Owner prior to purchase to ensure color and materials match other wall mounted device plates.

    b. Wall Phones: Stainless Steel with Mounting Lugs.
    c. Floor Box Devices: Plastic (within Floor Box cover)
    d. Modular Furniture Devices: Plastic

3. Type: RJ45 Standard Form Factor.

G. Style-Line Modular Faceplate Mounting Frames

1. Modular faceplate mounting frames shall be provided as necessary to support RJ-45 outlet jacks within all Floor Boxes and/or Surface Raceway.
2. Coordinate final color selection of mounting frames with Owner, Architect, and/or Engineer prior to purchase to ensure color matches floor box or surface raceway material finish. As a minimum, the color black shall be submitted for approval.

H. 106-Style Modular Faceplate Mounting Frames

1. Modular faceplate mounting frames shall be provided as necessary to support RJ-45 outlet jacks within all wall mounted TV outlets with combination power and data. Additionally, Contractor may elect to use this faceplate type for surface raceway devices.
2. Coordinate final color selection of mounting frames with Owner, Architect, and/or Engineer prior to purchase to ensure color matches floor box or surface raceway material finish. As a minimum, the color black shall be submitted for approval.

2.4 PATCH CORD REQUIREMENTS

A. General:

1. The patch cords shall meet the minimum requirements noted in Performance and Criteria Section for Category cable as applicable based on TIA-568-C.2 equivalent cable rating.
2. Patch cords shall be provided as part of project at main cross-connects, intermediate cross-connects, horizontal cross-connects, and communication device outlet locations.
3. Exact patch cords requirements including TIA-568-C.2 category, quantity, and lengths shall be coordinated with Owner, Architect, and Engineer.
4. The sum of patch cord lengths when added the permanent basic link shall not exceed 325-feet (100m).
5. Construction: Unshielded Twisted Pair type.
6. Electrical Specifications:

    a. TIA-568-C.2:
    b. UL and cUL Listed CM Cordage
    c. FCC Part 68.

7. Plug Requirements:

    a. Retention Force: 30-lb (133N).
    b. Insertion Life: 750 minimum.
    c. Plug/Jack Contact Force: 0.22-lb (100g).

8. Temperature

    a. Operating: 14 to +140ºF (-10 to +60ºC).
    b. Storage: -4 to +140ºF (-20 to +60ºC).

9. Lengths: Refer to Technology drawings (symbol legend) for additional requirements on various patch cord lengths.
10. Colors:

    a. Patch cords shall be colored to differentiate application types. Refer to Technology drawings (symbol legend) for additional requirements on color coding and quantities.

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION

A. Refer to Section 27 05 00 for requirements that shall be fulfilled as part of this specification section.

B. Elevator Interface

1. Provide for Elevator Junction Box requirements, as follows:

a. Low Voltage Cabling Contractor shall provide an elevator device junction box located within or outside of the Elevator Machine Room, for interface of elevator devices (elevator phones, IP security cameras, etc.) to be located within the elevator cab(s). This requirement complies with ANSI A17.1 code which prevents work within the Elevator Machine Room, other than specific elevator work.
b. Elevator device J-box shall include a keyed lockable door. Additionally, J-box shall have proper terminal strips suitable for terminating all cables within the J-box.
c. Coordinate exact location of elevator device junction box with the Elevator Contractor, Architect, and Engineer, prior to installation.
d. Provide all cabling as required between the elevator device J-box and the IC-room for all elevator device interfaces.
e. Provide all required interface points for connecting to elevator relays and travel cables.
f. The Elevator Contractor shall provide all cables in conduit from the elevator machine room to the associated elevator device J-box.
g. Cables entering the elevator device J-box shall be appropriately labeled by the Elevator Contractor, so that the Low Voltage Cabling Contractor can connect to the appropriate wires. Wires should be individually labeled to separate them from other elevator functions and to assist the Low Voltage Cabling Contractor in making proper connection points.

C. Labeling:

1. The labeling scheme shall be provided by the Contractor and coordinated with Owner, Architect, and Engineer prior to finalizing and initiating any work. A sample scheme shall be submitted for approval.
2. Each cable, wiring block, patch panel, and termination shall be identified at the main cross-connect (MC), at the intermediate cross-connect (IC), and at each station termination.
3. Refer to Specification Section 27 05 00 for additional requirements that shall be fulfilled as part of this specification section.

D. Horizontal Systems Cable Testing:

1. All communications copper horizontal cabling and pairs shall be tested for electrical continuity and wire map.
2. Cable testing shall confirm to the cables TIA-568-C.2 rating.
3. All cabling will be test/certified for conformance to the TIA-568-C.2 Category 6 and Category 6A specifications using TSB-67 Level 4 time domain reflectometer (TDR) or approved equivalent test equipment.
4. Cable tests will be per industry standard and also include the following:

a. Cable Length

b. Attenuation
c. NEXT
d. Characteristic Impedance
e. Mutual Capacitance
f. Resistance
g. Noise
h. Wire Map

5. (5) Printed test results shall be submitted on disc and printed copies by the Contractor for approval by Owner, Architect, and Engineer.

END OF SECTION

APPENDIX 1 - EQUIPMENT SCHEDULE

General Notes:
1. This specification is intended to be performance based, with the expectation that an “end-to-end” solution is provided by one of the “pre-approved” manufacturers (or partnerships) listed below.
2. Products listed below are intended to establish “benchmark” products from one or more of the “pre-approved manufacturers”. The listed benchmark products shall be used as a baseline when submitting products from a pre-approved manufacturer that does not have specific products listed.
3. Pre-approved manufacturers (listed in alphabetical order) include:
   a. Superior Essex / Legrand / Ortronics

Table 1 - Horizontal Cable / Information Outlet Jacks - 6A			
Item	**Part Name/Description**	**Manufacturer**	**Part Number**
1	Category 6A Riser Rated Cable		
		Superior Essex	6B-###-XA
2	Category 6A Indoor/Outdoor Cable		
		Superior Essex	6B-272-ER
3	Category 6A Information Outlet Jack (XX = Color)		
		Legrand	HDJ6A-XX
4	Category 6A Field Term Plug		
		Legrand / Ortronics	FTPUC6A

Table 2 - Connectivity Products			
Item	**Part Name/Description**	**Manufacturer**	**Part Number**
1	24-port Patch Panel - Flat Modular (Individual Jack Inserts)		
		Legrand / Ortronics	PHDHJU24
2	48-port Patch Panel - Flat Modular Flat (Individual Jack Inserts)		
		Legrand / Ortronics	PHDHJU48
3	Surface Mount Box "Biscuit" (# = Number of Ports, XX = Color)		
		Legrand / Ortronics	404HDJ#-XX
4	Blank Outlet Dust Covers (XX = Color)		
		Legrand	HDJBL10-XX
5	Stainless Steel Faceplate - Wall Phone with Lugs		

		Legrand / Ortronics	403STJ1WP plus HDJTJA20
6	Stainless Steel Faceplates (with label window) (# = Number of Ports)		
		Legrand / Ortronics	403STJ1# plus HDJTJA20
7	Plastic Faceplate (with label window) (# = Number of Ports, XX = Color)		
		Legrand / Ortronics	403HDJ1#-XX
8	Modular Furniture Faceplate, 4-port (Black)		
		Legrand / Ortronics	421HDJ4-00
9	Style-Line Outlet Frames (Multi-port, XX = Color)		
		Legrand / Ortronics	41900017-XX
10	106-Style Outlet Frames (Multi-port, Black)		
		Legrand / Ortronics	40800017 (2-Port) 40800019 (4-Port)
11	Category 6A Ethernet Surge Protector - PoE		
		Ditek	DTK-110C6APOE
		Ditek	DTK-MRJPOE DTK-RM12POE

APPENDIX 2 - SPECIFICATION COMPLIANCE MATRIX TEMPLATE

Indicate compliance of the proposed equipment and/or services by the word "Comply" following each paragraph number. Indicate an exception to the requirement by the word "Exception" following the applicable paragraph number. Should the proposed equipment and/or services not entirely comply with the requirements specified, but ultimately achieve the intent, the Bidder shall explain fully the extent, or lack thereof, of compliance for the applicable equipment and/or services proposed. Instances where there is no indication of compliance or exception shall be considered non-compliant.

Contractor shall submit Compliance Matrix with the Bid Proposal AND at the time of Product Data submittal (as indicated previously in this specification) so that a complete system submittal reviewed can be performed. Contractor shall use the following template to create a full Compliance Matrix for each specification section including Parts 1, 2, and 3.

	COMPLIANCE	**EXPLANATION**
PART 1		
1.1		
A	COMPLY	
B	EXCEPTION	Note clarifications and/or reason for exception here.
C	COMPLY

SECTION 27 41 00 - AUDIO VISUAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. This section is valid only when considered in total with complete Construction Document package. References are for the convenience of the reader and their inclusion in or omission from any section in no way limits its scope or intent of any Contract Documents.

B. Drawings and general provisions of the Contract, including General Conditions, Supplementary Conditions, and Division 01 - Specification Sections, apply to the provisions of this section.

C. Division 26 Basic Materials and Methods sections apply to work in this section.

D. Division 27 in its entirety.

1.2 SUMMARY

A. Coordinate project schedule, installation schedule, phasing and any other requirements deemed necessary with Construction Manager and/or General Contractor and all necessary trades to ensure successful completion of work.

B. The extent of Audio Visual infrastructure work is indicated by Division 27 specifications and Technology drawings and schedules and is hereby defined to include, but not by way of limitation, the provisions of:

1. Raceway systems including but not limited to conduits, cable trays, sleeves, surface raceways, telecommunication services entrance, manholes, pull-boxes, junction boxes, back-boxes, as required and specified in Division 26 sections. The Construction Manager and/or General Contractor shall coordinate this with the Sub-Contractors performing work and determine how scope of work is assigned. The purpose of this specification is to establish design intent and general system scope.
2. All audio visual system’s infrastructure shall be provided as part of the Base Building Project including but not limited to raceway, conduit, floor and back-boxes, pull and plenum job boxes, poke-through, structural support elements, and mounting frames.
3. Patch cords, jumper cables, and cross-connect cables to interconnect wiring terminals as well as electronic equipment. These cords shall be rate equivalent of better than the point to point cabling.
4. AV rack/cabinet fit-out including cabinets, racks, fans, power management hardware, backboard, and raceways for terminating cable and installation of electronic equipment.
5. Power distribution within equipment racks and cabinets including power sequencers, power supplies and power strips.
6. Grounding and bonding of all metallic hardware components to the nearest telecommunications grounding bus (TGB) bar including but not limited to equipment racks, cabinets, cable trays, ladder rack, metallic cable sheaths, wall mounted wiring terminals, conduits, sleeves, metallic ductwork, and frames when AV equipment is co-located in a Telecom Room or Communication system equipment closet.
7. All physical cable management hardware including, but not limited to: “J-hooks” in accessible ceiling areas, “D-rings” on backboards, vertical and horizontal managers on racks and cabinets.

8. Fire stopping as required. Contractor shall provide fire stopping for all low-voltage openings (including empty low voltage raceway) once cable installation is complete. Confirm specific fire stopping scope requirements with General Contractor and/or Construction Manager.
9. Design and fabrication for custom loudspeaker mounting and rigging assemblies to be reviewed and approved by Structural Engineer and local governing jurisdiction.
10. Seismic bracing of all equipment cabinets, equipment racks and ladder-type or wire basket cable tray, ceiling mounted loudspeakers as required by code and by local governing jurisdiction.
11. Verifiable testing of all AV cable infrastructure and grounding systems as noted by specification, drawings, and applicable industry standards.
12. Labeling of all AV infrastructure components, hardware, cable, and terminations with mechanically printed labels.
13. Preparation and submission of product data, shop drawings, testing reports, as-built drawings, Operations and Maintenance manuals, quick operation guides and cabling documentation as required in this specification.
14. Software, including executable files for all electronic devices requiring custom programming as part of a turn-key solution.
15. Construction and Installation warranties.
16. Installation and testing of all system and components.
17. Onsite administrative and user training.

1.3 INFORMATION SUBMITTALS

A. This subsection pertains to all AV Contracting firms providing they can meet or exceed the general requirements listed below. The General Contractor and or the Electrical Contractor shall not have the sole right to determine the eligibility of AV Integrators/Contractors. This is an act reserved for the Owner and the Engineer, but can coordinate and submit their preferences and or reservations with the design team and Engineer. Each bidding firm must comply and submit all of the requested documentation found within this subsection below:

B. Company Profile:

1. The Contractor shall be a firm with at least ten (10) years' experience in the fabrication, assembly, and installation of audio visual systems of similar magnitude. The Contractor shall submit this documentation to the Architect, Owner's Representative and the AV Engineer one (1) week prior to the bid return date. No exceptions will be made for late or incomplete documentation as this documentation will be rejected.
2. Documentation shall include a breakdown of the total number of employees, clearly indicating area of responsibility and length of time with firm in that capacity. Employee profile will include number and level of ICIA (InfoComm) CTS/Installers and NSCA NICET certified installers, if any, available for the project installation. The Bidder shall also indicate union status, if any, of shop and field installation personnel.

C. Project Team:

1. The Contractor shall clearly identify project team members and that statement shall include name, years with firm and a brief resume of the employees past projects and education. Pertinent team members that are to be identified shall be Project Manager, Chief Engineer, Programmer, Senior Field Technician, and Senior Bench Technician.

    a. Engineer: Shall be certified as a CTS-D or shall be a licensed Professional Engineer (PE). On projects utilizing systems from manufacturers with a recommended training, testing, and credentialing program, the engineer shall be certified to the highest relevant level offered by that manufacturer.

b. Project Manager: Shall be certified as CTS. On projects utilizing systems from manufacturers with a recommended training, testing, and credentialing program, the project manager shall be certified to the highest relevant level offered by that manufacturer.
c. Programmer Certification: Due to the complexity of the today's projects, the Contractor shall have in-house, manufacturer certified programmers on all equipment requiring programming or custom configurations. The Contractor shall provide complete proof of current certifications within their pre-qualification documentation prior to the bid submittal due date.

D. Note: Consultant reserves the right to verify certification status with each manufacturer as necessary.

E. In House Capabilities: Contractor shall have in-house capabilities and facilities for equipment rack assembly, shop fabrication, software programming and equipment testing. All equipment racks shall be assembled and thoroughly tested at the Contractor facility prior to delivery and installation at the project site. The Contractor shall provide a signed statement with the other pre-qualification documentation.

F. Similar Projects:

1. Documentation must identify, specifically, similar projects of the same or greater magnitude. Of those projects noted, the Contractor must provide current owner/user contact names and telephone numbers, as well as a job description and total value of the audio, video and control components, with a clear delineation between labor and equipment costs, as well as duration of project. The submittal supplied must clearly state that the firm submitting the bid response has actively been involved in the projects in a site installation and service capacity.

G. Submittal Schedule:

1. In addition to the requirements noted herein, refer to Division 1 Specification for additional requirements. As a minimum, Contractor shall ensure all requirements listed here are met.
2. Within two weeks after award of contract, the Contractor shall submit a proposed schedule for submitting product data and shop drawings. At a minimum, the following items shall be included:

a. Submittal date for Compliance Matrix.
b. Submittal date for Construction Schedule.
c. Submittal date for Product Data and Shop Drawings.
d. Submittal date for Commissioning and/or Test Results.
e. Submittal date for As-Builts.

3. Within 45 days after award of contract or as dictated by the construction schedule (whichever period of time is shorter), the Contractor shall submit prefabrication submittals consisting of product data and shop drawings for approval. Partial submittals will not be accepted without prior written approval from the Architect.
4. Review of the Prefabrication Submittals by the Architect is for purposes of tracking the work and contract administration and does not relieve the Contractor of responsibility for any deviation from the Contract Documents, or from providing equipment and/or services required by the Contract Documents which were omitted from the prefabrication submittals.

5. No portion of the project shall commence nor shall any equipment be procured until the prefabrication submittals (including product data and shop drawings) have been approved in writing by the Architect. All installations shall be in accordance with the Contract Documents.
6. A detailed completion schedule shall be submitted with the prefabrication submittals.
7. Prefabrication submittals shall be accompanied by a letter of transmittal identifying the name of the project, Contractor's name, date submitted for review, and a list of items transmitted.

H. Compliance Matrix:

1. Provide a specification compliance matrix indicating compliance or deviation for each item in the specification. Refer to Appendix 2 for additional requirements.

1.4 ACTION SUBMITTALS

A. Requirements of Division 01 shall apply and may supersede requirements noted herein.

B. Product Data:

1. Warranty Information: Provide all manufacturer product warranty information for review and approval.
2. Component List: Provide complete submittal component list (i.e. table of contents) at the beginning of the submittal package. Component list and manufacturer cut-sheets shall be compiled to match the order of each Appendix. Component list shall include:

    a. Component name
    b. Manufacturer
    c. Specific product number (to clearly indicate special options, colors, etc.

3. Cut-Sheets:

    a. Submit manufacturer’s cut-sheets on all components listed within this specification and corresponding appendix. All components and parts being used shall be highlighted in color on cut-sheets to distinguish specific product/part numbers, options, colors, accessories, etc.
    b. Materials and equipment supplied by the Contractor shall be new and shall meet or exceed the latest published specification of the manufacturer in all respects.
    c. The Contractor shall provide the latest comparable model, available at the time of bidding, of each piece of equipment.

4. Product Substitutions:

    a. These specifications are intended to be performance based, thus all products listed in each respective Appendix 1: Equipment Schedules are “benchmark” products.
    b. The Contractor shall include products from one of the “pre-approved” manufacturers as noted in the Appendix.
    c. All substitutions shall meet or exceed the minimum functional, physical, and technical specifications. Acceptance of such substitutions is at the discretion of the Owner, Architect, and Engineer.

C. Shop Drawings:

1. Any drawings created in a Computer-Aided Design program shall be issued in AutoCAD or Revit (latest version) format depending on which program was selected for use by the Architect as the project standard.
2. Drawings of panels, plates, designation strips and samples showing finish and color.
3. Drawings of all equipment modifications that change or void manufacturer's warranties.
4. Schematic drawings of custom circuitry shall include:

    a. Receptacle pin numbers and component callouts
    b. Details of custom resistive combining networks, filter, or pads
    c. Point-to-point wiring drawings for control system modules and interfaces, and for switches or relays

5. Provide descriptions of all control functions and all equipment states associated with each function.
6. Drawings of custom designed consoles, tables, carts, support bases, and shelves.
7. Drawings of all equipment modifications that change or void manufacturer's warranties.
8. Complete system construction and point to point wiring color schematic drawings, including all component values and showing complete letter and number identification of all wire and cable including point to point homeruns and source to input plate as well as jacks, terminals and connectors. These drawings shall detail all equipment that is to be installed or included in the project.
9. Complete system functional one-line drawings shall include:

    a. Equipment names and model numbers, and descriptions.
    b. Dimensioned equipment rack elevations outlining RU heights, equipment positions, unused rack space, total power consumption, mechanical loading, and total rack weight.
    c. Dimensioned equipment rack elevations and wall plate details, patch panel assignment drawings are required. Plate terminations for amplifier power shall show wattage and rated impedance values (in ohms); power number shown shall be 20.0% less that available wattage from amplifier for head-room unless otherwise noted on the Construction Drawings.

10. Run sheets or field wiring drawings:

    a. Show at each terminal point the type of connector to be used and include a typical wiring detail of each connector
    b. Note where shields are connected and where they will float to ensure the integrity of the grounding system
    c. Call out wire types and color-codes where appropriate
    d. Assign wire numbers and patch-bay locations to every wire and patch point.
    e. Show unused electronic equipment termination points, i.e. input/output ports as "Future".
    f. AC Power sequencing connectivity diagrams.
    g. Complete data sheets with all forms filled out, bulk cabling and terminations.
    h. Note: the substitution of the equipment originally specified in the Contract Documents in the shop drawing with prior consent of the engineer shall be rejected.

11. Loudspeaker rigging and mounting assemblies suspended from or mounted to structure shall be signed and sealed by a professional engineer licensed to practice in the state of the project. Include copy of design calculations with written approval.
12. Dimensioned loudspeaker mounting details including fly-ware and hardware harnesses with specific aiming angles for each device utilized in clusters or line array designs.

13. Wall plate details showing front and back of plate for verification of connector space.
14. Panels, plates, and designation strips, including details relating to terminology, engraving, finish and color.

1.5 DELEGATED DESIGN SUBMITTAL

A. Contractor shall program hardware and software necessary to operate AV system components. Such components include but are not limited to digital signal processors (DSP), low voltage control systems, touch panels, web interfaces, and remote management platforms. This software shall not be proprietary and be provided by the manufacturer of the sub-system.

B. All preset, configuration and executable (*.exe) files necessary for a system update (or re-installation) shall become the property of the Owner in perpetuity, no exceptions. Contractor shall provide final operating system and software files to the AV Engineer and Owner two (2) weeks prior to Final Acceptance Testing.

C. Contractor shall initiate and schedule a series of design meetings to investigate and deliver an approved Software User Interface/User Experience (“UI” “UX”) with Architect / Owner, AV Engineer.

1. Contractor shall provide printed or electronic samples of logical UX diagrams and UI templates to Architect / Owner for direction.

D. Control system and DSP programming files:

1. Contractor shall submit DSP programming file to the AV Engineer for review and acceptance at least two (2) weeks prior to on-site system installation begins.

E. Written Owner approval of UX and UI shall be attained prior to installation of equipment at site.

1. Contractor shall submit a final review of UX and UI layouts for Owner / AV Engineer review and comment no later than two (2) weeks prior to onsite installation.

1.6 CLOSEOUT SUBMITTALS

A. The Contractor shall provide one (1) full size color hard copy and an electronic copy each of the following:

1. “As-built" drawings for every item and sub-assembly for all of the areas covered under Part 3. Provide an electronic file version of the “As-Built” drawings for all systems in the latest version of Revit and or AutoCAD depending on the native drawing format utilized by the AV Engineer or specified by the Architect for the Construction Documents.
2. Equipment manufacturer's operation and maintenance manuals for each piece of equipment.
3. A System Quick Reference and Operation and Maintenance Manual. The Contractor shall produce this manual specifically for the systems detailed herein.

a. The Quick Reference section shall describe in non-technical terms for casual users the method of using the facilities. The document shall be a step-by-step operating procedure for each desired feature utilizing photos or screen captures.

b. The Operation section shall describe all typical procedures necessary to activate each system to provide for the functional requirements as listed under the Detailed Specifications. The reader of this manual shall be assumed to be technically competent, but unfamiliar with this particular facility.
c. The Maintenance section shall provide a recommended maintenance schedule with reference to the applicable pages in the manufacturer's maintenance manuals. Where the manufacturer provides inadequate information, the Contractor shall provide the information necessary for proper maintenance.
d. Front view of all equipment racks, showing the final commissioned settings for every variable push-button, rotary control, slider control, indicator, or other such indicator.
e. Recommended maintenance schedule with reference to the applicable pages in the manufacturers' maintenance manuals. Where the manufacturer provides inadequate information, provide the necessary information for proper maintenance.
f. List of replacement parts necessary and recommended for normal maintenance.

B. Notify the Owner and Architect when testing and adjustment of the systems are complete, normal settings marked, and systems are available for acceptance tests.

C. Provide completed copy of the testing and adjustment report organized according to the testing requirements in this section. Frequency related test results shall be submitted in both tabular and graphical formats.

D. Provide two (2) complete sets of software documentation for application programs and system software. Software documentation will include all source-code listings for software supplied by the Contractor and to the extent that the Contractor, having used its best efforts, is able to obtain source-code listings from any third-party suppliers. Contractor shall provide a hardcopy of final touch screen layouts. Submittal of software / firmware and *.exe files shall be on disc.

E. Provide two (2) copies for the Client and one (1) for the AV Engineer of the "Overall System Operation and Maintenance Manual", it shall include descriptions of the procedures necessary to maintain, operate and troubleshoot each system.

1.7 QUALITY ASSURANCE

A. Codes: Work shall be done according to applicable requirements of governing international, federal, state, county municipal and local codes, rules, and regulations.

B. Standards: Equipment, materials, installation and testing specified shall conform to manufacturer's recommended practices as well as the current edition of standards from the following institutions:

BICSI - Building Industry Consulting Service International
UL - Underwriters Laboratory
EIA – Electronics Industries Alliance
TIA – Telecommunications Industry Association
NEC – National Electrical Code, Latest Edition
NFPA 70, NEC Latest edition, Article 300-22(c) UL2043
NFPA 72, Latest Edition
NFPA 90A, Latest Edition, Section 2-3.10.1(a), Exception 2.
Underwriters Laboratories (UL): UL1480 (UUMW) UL Control #7P97 Air Handling Spaces, ANSI/UL263
NAB – National Association of Broadcasters
OSHA – Occupational Safety and Health Administration

NSCA – National Systems Contractors Association
ANSI/INFOCOMM - V202.01:2016 Display Image Size for 2D Content in Audiovisual Systems
ANSI/INFOCOMM - 1M-2009 Audio Coverage Uniformity in Enclosed Listener Areas
ANSI/INFOCOMM - 3M-2011 Projected Image System Contrast Ratio
ANSI/INFOCOMM - 10:2013 AV Systems Performance Verification
INFOCOMM – F501.01:2015 Cable Labeling for Audiovisual Systems
INFOCOMM - Audiovisual Best Practices
ISO - International Standards Organization
AES - Audio Engineering Society

1.8 DELIVERY, STORAGE, AND HANDLING

1.9 PROJECT / SITE CONDITIONS

1.10 DEFINITIONS

A. The term "Engineer" shall refer to M-E Engineers, Inc., under contract to the Architect, Fentress, and is responsible for the design and specification of the audio-visual systems.

B. The terms “AVC”, "AV Contractor" and “Contractor” shall refer to the Audio-Visual Systems Contractor who has been awarded the contract for this scope and who has responsibility for the performance of the work specified in this specification.

C. The term “provide” used throughout this specification and drawings shall mean “furnish, install, test, and certify.”

D. The term "specified elsewhere" shall refer to material and work which is related to this contract and for which the Contractor is not responsible except as otherwise detailed herein. Some or all of these items may be included in the overall electrical contract.

E. The term "NIC" refers to work or equipment that is not in the contract covered in this specification.

F. The term "shall", is mandatory; the term "will", is informative; the term "should", is advisory; and the term "provide", means furnish and install.

G. The term “Complete” shall refer to equipment and systems that shall be provided with all necessary accessories to complete a turn-key solution. Example: “equipment racks” that include doors, locks, side panels, covers, blank and vented panels, motorized fans, cable management, AC power distribution and sequencing. Another example would be control systems that must include all accessories such as RF transceivers, RS-422/485 baluns, distribution amplifiers, PoE power supplies or switches (unless otherwise noted on the one-lines), and external power strips and supplies, cable management as required providing the Owner with a fully functional and operational turn-key solution. If the Contractor is unclear about a particular piece of equipment, system accessories, or design intent, then it is the sole responsibility of the Contractor to immediately contact the Engineer via the RFI process for clarification prior to the bid submittal.

H. The term "OFCI" shall refer to Owner Furnished equipment, which shall be provided by the Owner or its designee to the Contractor for installation. The Contractor shall be responsible for installing the equipment at the project site in good functional order as detailed herein.

I. The term “EC” shall refer to the Electrical Contractor.

J. The term ‘GC” shall refer to the General Contractor.

K. The term “Bidder” shall refer to a firm submitting a bid response to this specification.

L. Refer to Section 27 05 00 for additional requirements that shall be fulfilled as part of this specification section.

1.11 SYSTEMS DESCRIPTION

A. Wellness Center:

1. Audio Video Systems

a. Flat panel displays (content via streaming only)
b. Distributed audio loudspeakers
c. Media player
d. Bluetooth connection
e. Wall mounted touch panel control for power on/off, source selection, and volume control

B. Elevator Lobbies

1. Video systems

a. Flat panel display
b. Wayfinding player

C. Atrium

1. Audio systems

a. Distributed audio loudspeakers
b. Hardwire microphone connection
c. Wireless microphones
d. Media player
e. Volume control

D. Judge’s Chamber, Judge’s Workroom:

1. Polycom Video Conferencing Systems

a. Flat panel display
b. All-in-one camera, microphone, speaker soundbar
c. Hardwire HDMI connection
d. Furniture cable management system (HDMI passthrough tabletop)
e. Wireless presentation connection
f. Wall mounted touch panel control for power on/off, source selection, and volume control (Judge’s Workroom Only)

E. Small Conference Rooms, Small Mediation Rooms:

1. Polycom Video Conferencing Systems

a. Flat panel display
b. All-in-one camera, microphone, speaker soundbar
c. Hardwire HDMI connection
d. Furniture cable management system (HDMI passthrough tabletop)
e. Wireless presentation connection

f. Tabletop touch panel control for power on/off, source selection, and volume control
g. Room Scheduler

F. Medium/Large Conference Rooms, Medium/Large Mediation Rooms:

1. Polycom Video Conferencing Systems

a. Flat panel displays
b. Distributed audio loudspeakers
c. Microphones
d. PTZ camera
e. Hardwire HDMI connection
f. Furniture cable management system (HDMI passthrough tabletop)
g. Wireless presentation connection
h. Tabletop touch panel control for power on/off, source selection, volume, lighting, and shade control
i. Room Scheduler

G. Training Rooms:

1. Divisible room functionality

a. Divisible room partition sensor

2. Audio Video Systems

a. HD Projectors
b. Projection Screens
c. Assistive Listening
d. Wireless Microphones
e. Microphone stands
f. Distributed audio loudspeakers
g. Microphones
h. Hardwire HDMI connection through floor box
i. Furniture cable management system (HDMI passthrough tabletop)
j. Wireless presentation connection
k. Tabletop touch panel control for power on/off, source selection, volume, lighting, and shade control
l. Room Scheduler

H. Courtrooms:

1. Audio Video Systems

a. Flat panel displays for general presentation of content.
b. Fixed desk microphones
c. Distributed audio loudspeakers
d. Sound masking system
e. Assistive listening
f. Wireless microphones
g. Language Interpretation and Translation
h. Polycom video conferencing w/ PTZ cameras
i. Hardwire HDMI connection
j. Furniture cable management system (passthrough tabletop)
k. Tabletop touch panel control

l. Internal broadcasting steerable cameras
m. External broadcast (press) connections in room via junction box

I. Signal Routing Table:

		At Router	Video Wall Processor	Video Room Display 1	Video Room Display 2	Video Room PC Capture 1	Video Room PC Capture 2	Press Room Display 1	Press Room Display 2	Home Team Locker VW1	Home Team Locker VW2	Home Team Locker Aux Displays	Coach Locker Room Display 1	Coach Locker Room Display 1	Training Room	Green Room

MISC SIGNAL EXTENSION*																
USB Extension	USB- CAT5e					X	X						X	X		
** USB extension provided for Cowboy Remote. Connect to OFE PCs in Video Room.																

1.12 WARRANTY

A. Provide manufacturers standard warranty on all products as applicable.

1.13 OWNER TRAINING

A. The Contractor shall provide on the job training by the project engineer, to personnel designated by the Owner, to instruct them in the operation of the systems. In the event the Contractor does not have qualified instructors on staff for sophisticated equipment, the Contractor (at no additional cost) will provide a manufacturer's representative for such instruction to the Owner.

B. The first round of training shall take place after the systems are operational, but before the acceptance tests. There shall be a minimum of: Two (2) owner training sessions of 2 hours each with the end users and district IT person including ME Engineers AV designers. There shall also be a minimum of two (2) follow up training sessions of 2 hours each directly with the district and IT person after the systems have been in use and for any final training needs. Training to included detailed training and use of the Soundcraft mixers and use with the Dante audio and control network. Detailed training of the wayfinding players and features/functions of the digital signage functionality. This should not include content creation but will need to have a focus on how to manage and schedule content to be displayed. Detailed training of the multipurpose room control panel GUI and features including presets and also and advanced audio controls page.

C. The AV integrator should coordinate with end user and the AV designer on final GUI layout and control functions prior to submittal.

1.14 COMMISSIONING

1.15 MAINTENANCE AND SUPPORT

A. Extra Materials / surplus stock

B. Onsite Support / Event Support

C. Service agreements

PART 2 - PRODUCTS

2.1 GENERAL

A. Materials: Supply materials and equipment that shall be new and shall meet or exceed the latest published specifications of the manufacturer.

B. Supply the latest model, available at the time of bidding, of each piece of equipment. The Owner may request, at their option, that the latest model of equipment, or new technology, available at the time of installation be provided. If a later model is requested, adjustments will be made to cover cost changes between the cost at bid submittal and the cost of the latest model at the time of installation.

2.2 EQUIPMENT

A. See Appendix 1 for equipment schedules

PART 3 - EXECUTION

3.1 INSTALLATION PRACTICES

A. General

1. Audio Visual Systems Contractor (AV Contractor or Contractor) shall coordinate with Electrical Contractor (EC) on conduit/junction box locations for audio equipment and routing of audio, control, and power cables/conduits from terminals, poke-thru /floor and pull boxes, wall plates, stub-ups to system equipment racks.
2. Installation shall include the delivery, unloading, setting in place, fastening to walls, floors, ceilings, counters, or other structures where required, interconnecting wiring of the system components, equipment alignment and adjustment, and all other work whether or not expressly required herein which is necessary to result in complete operational systems.
3. Contractor shall construct AV equipment racks and sub-assemblies, including all equipment to be installed therein off-site. All wiring work, labeling of wiring, cable dressing, hardware supports, and connection panels, cable wiring documentation, socket installation, ventilation and power supply regulation and filtering component installation shall be performed in AV Contractor's own premises.

4. The Contractor shall not deliver equipment in original packaging to the site for installation. All such equipment will be unpacked and checked thoroughly in AV Contractor's premises. Contractor shall test such equipment as it is received to ensure that it conforms to the manufacturer's specifications. On no account shall the Owner be liable for any delays of completion of the installed system due to defective equipment being received by Contractor.
5. For the purposes of coordination with Architects specified furniture, the Contractor will insure that such equipment or mounting hardware is compatible with and suitable for installation in that furniture. It shall be the AV Contractor's responsibility to ensure they coordinate with the furniture and our millwork contractor and that parties shall exchange and follow their Shop Drawings to ensure that dimensions and structural supports are adequate for the AV equipment installation. It is the AV Contractor's responsibility that the request and delivery of such critical coordination information is satisfactorily executed and in as much as the Contractor has control over the delivery of such information, the Contractor shall deliver it as requested by the Architect.
6. All installation practices shall be in accordance with, but not limited to, the general design and construction requirements of the Architect, and these specifications and drawings. Installation shall be performed in accordance with the applicable standards, requirements, and recommendations of local authorities having jurisdiction (AHJ). Before commencing work, the Contractor shall familiarize all project team members with all of these requirements.
7. If, in the opinion of the Contractor, an installation practice is desired or required, which is contrary to these specifications or drawings, a written request for modification shall be made to the AV Engineer and/or Architect. Modifications shall not commence without written approval.
8. During the installation, and up to the date of issuance of the Final Acceptance Memorandum, the Contractor shall be under obligation to protect their finished and unfinished work against damage and loss. In the event of such damage or loss, they shall replace or repair such work at no cost to the Owner.

3.2 CLEAN UP AND REPAIR

A. During the installation, the Contractor shall be expected to maintain a clean and safe working environment.

B. Upon completion of the work the Contractor shall remove all their refuse and rubbish from and about the premises, and shall leave the relevant areas and equipment clean and in an operational state. The Contractor shall be responsible for repairing any damage caused to the premises by the AV Contractor's installation activities, at no cost to the Owner.

3.3 SECURITY

A. Provide a project security program to:

1. Protect Work, stored products, and construction equipment from theft and vandalism.
2. Protect Owner's operations at site from theft, vandalism or damage from Contractor's work or employees
3. Maintain security program throughout construction period, until Owner occupancy or Owner acceptance precludes the need for Contractor security.

3.4 PHYSICAL INSTALLATION

A. All equipment shall be firmly secured in place unless the equipment has been documented to be portable in nature, either within this specification or as shown in the Construction Documents.

B. All fastenings and supports shall be adequate to support their loads with a safety factor of five (5) times the load weight or as required by Code, whichever is greater. Wind shear must be taken into account when installing all pole mounted loudspeakers.

C. All boxes, equipment, wall plate, speakers cabling shall be secured plumb and square.

D. All loudspeakers shall be installed according to the manufacturers' instructions. All loudspeakers shall be installed with a secondary seismic safety harness assembly in addition to the specified loudspeaker mount.

E. In the installation of equipment and cable, consideration shall be given not only to operational efficiency, but also to overall aesthetic factors. When an issue regarding a visual aesthetic that the Contractor is aware of, they shall inform the Project Manager and Architect immediately so that all parties can coordinate and provide an adequate solution in a timely manner.

F. Trim and Escutcheon Components:

1. To insure a proper finished appearance, the Contractor shall furnish and install trim/escutcheon components at all conditions where AV components pass through the finished walls, floors, and ceilings. This would include but not be limited to video projector supports, video flat panel monitors, control panels supports which are not specifically supplied with integral flanges/trim components.
2. The visible component of any trim shall be as small as possible preferably no wider than .50". All trim components at the ceiling plane shall be finished to match the approved ACT ceiling grid system components. The Contractor shall obtain a sample from the General Contractor, including any custom color information, or standard color numbers. All trim components shall be submitted to the Architect for review and approval prior to fabrication.

3.5 CABLE INSTALLATION

A. Comply with requirements in Section 078413 "Penetration Firestopping for firestopping materials and installation for penetrations through fire-rated walls, ceilings, and assemblies.

B. All cables for this project must conform to the latest version of the NEC as well as local code and owner requirements.

C. Where existing cabling is to be abandoned, it shall be completely removed as directed in the NEC.

D. All cables, regardless of length, shall be marked with permanent wrap-around number letter cable markers at both ends. There shall be no unmarked cables at any place in the system; labels must be computer-generated for legibility. Wire labels done by hand in the field must be replaced with computer generated labels. Marking codes used on cables shall correspond to codes shown on drawings and on run sheets.

E. Internal and Inter-rack cabling shall be neatly strapped, dressed, labeled, and adequately supported without pinching cable bundle.

F. Cable management: Use only Velcro type cable straps within the head-end rack to secure and route the cable bundles; no exceptions.

G. Terminal blocks, boards, strips, or connectors, shall be furnished for all cables that interface with racks, cabinets, consoles, or equipment modules. The use of “wire nuts” to terminate or connect cabling is strictly prohibited.

H. All cables shall be grouped according to the signals being carried. In order to reduce signal intermodulation distortion, separate groups shall be formed for the following cables:

1. Power cables
2. Low voltage system cables
3. Video cables
4. Audio cables carrying signal levels less than –20.0 dBm.
5. Audio cables carrying signal levels between –20.0 and +20.0 dBm.
6. Audio cables carrying signal levels above +20.0 dBm.

I. As a general practice, all power cables, low voltage control cables and high level cables shall be run on the right side of an equipment rack as viewed from the rear. All other cables shall be run on the left side of an equipment rack, as viewed from the rear.

J. When dressing the equipment rack, cables ties shall be placed at appropriate intervals of approximately six (6) inches for vertical bundles, four (4) inches for horizontal bundles. No cable ties shall cause the cable to exceed the manufacturer’s recommended bend radius or deformed the cable.

K. All vertical cable bundles internal to AV system equipment racks shall be attached to the rack frame utilizing a cable management system.

L. All cables shall be continuous lengths without splices. All system wire, after being cut and stripped, shall have the wire strands twisted back to their original lay and be terminated by approved soldered or mechanical means. No bare wire terminations shall be allowed, unless specified specifically on the drawings. No exceptions. Heat-shrink tubing shall be used to insulate the ground or drain wire.

M. All solder connections shall be made with rosin-core solder using temperature-controlled solder stations. No cold or cracked solder joints are acceptable. Any connections, which do not appear to be clean and shiny, or which show signs of cracking, shall be re-soldered by the Contractor before Final Acceptance testing of the system.

N. Mechanical connections using insulated, crimp-type connectors shall be bonded to the connector by soldering the wire to the metal part of the connector.

O. Connections made with screw actuated pressure type terminal strips shall be made by stripping approximately .25” of insulation from the stranded conductor. Then the un-tinned wire shall be inserted into the terminal and tightened.

P. All wire bundles are to be neat and combed free of cable crossovers.

Q. No cable shall be installed with a bend radius less than that recommended by the cable manufacturer.

R. All wire markers shall face a common direction.

S. All cables shall have proper connector housing.

T. All equipment racks shall be fully dressed out and cables shall not protrude from the back of the rack.

U. All cable entry shall be through the tops of racks or through entrance holes in the base of the rack. No cable shall enter racks through front, rear or side panel openings.

V. Millwork installed or pivoting racks shall be provided with a sufficient amount of dressed cabling or harness to allow free and untethered travel of the rack from the permanent locking position to the extended “service” position.

W. All cables located in the ceiling areas, excluding corridors, are to be J-hooked and kept separate from data cables with crossovers at ninety (90) degrees. Protection, such as electrical conduit, is required if the cabling is within inaccessible areas or hard lid ceilings.

X. All digital multimedia transport (HD Based T / HDBT) cabling shall be CAT6A (or better) shielded cables and terminations. Criteria required:

1. Plenum CAT6A
2. 24.0 AWG or greater
3. Solid center conductor
4. Outer shielding
5. SF/UTP or F/UTP type
6. Terminations: shielded

Y. Unless otherwise called for in these specifications and drawings, the following cables (those that apply), or their pre-approved equals: Note: Any specific cable AWG gauge found in drawing package supersedes this document. These cable types are cited to illustrate the type and quality of cable required. Plenum cable must be utilized as required. Unless otherwise noted, cables from other reputable manufacturers will be considered acceptable only if data sheets are submitted and approved by the AV Engineer prior to installation. Contractor must verify cable lengths and confirm the suitability of the cables listed above. Where signal loss is beyond anticipated norms, the Contractor shall coordinate with manufacturers and the Engineer to select a cable that will meet or exceed the requirements. No exceptions.

Z. Unless otherwise noted, all HDBT applications shall utilize shielded CAT6A cable and shielded connectors for 1080p. For 2k and 4k resolution applications, category cable that can verifiably pass a 100 meter HDBT test is required. If the Contractor is unsure as to the specific meaning or intent of this requirement, they should contact the consultant using the pre-bid RFI process. Cable and connectors that are not approved and installed shall be replaced at no charge to the Owner. All patch cords must be at the identical specification (or better) of the cable and connectors used for the HDBT homeruns. No exceptions!

AA. Unless otherwise noted, all analog video and computer video cables are to be terminated using seventy-five ohm (75.0 Ω) connector.

BB. Cables running in plenum areas without conduit shall be plenum rated cable; match the specified cable above. It is the responsibility of the bidder to inspect the electrical drawings and verify in what spaces plenum cable shall be used. No claims for additional monies, based on the use of plenum cable, will be allowed.

CC. All cables (except video and pulse cables which must be cut to an electrical length) shall be cut to the length dictated by the run. No splices shall be permitted in any pull boxes without prior permission of the AV Engineer. For equipment mounted in drawers or on slides, the interconnecting cables shall be provided with a service loop of appropriate length based on the bend radius of the cable.

3.6 CONNECTION PLATE RECEPTACLES

A. Unless otherwise detailed herein, the following types of panel receptacles shall be used on all connection boxes, panels, plates, and wire ways:

Audio (microphone or line level - Input only) - XLR type
Audio (loudspeaker level) - Polarized locking connector. (Neutrik Speakon)
Data, Serial (RS-232, 422, 485) - DB-9 or as noted on the drawings
Data, LAN RJ-45
Line Level Audio – RCA, .25” Tip Ring Sleeve (TRS)
Composite and 3G-SDI Video – BNC
Coaxial & Triax: BNC
CATV – RF
VGA – HD15
DVI-D – DVI-D or DVI-I
HDMI – HDMI
DisplayPort – DisplayPort, dual-mode
CAT6A – RJ-45 Shielded
Fiber Optics: as shown in the drawings or required by active components.

3.7 PATCH PANELS

A. All patch panels shall be wired so that signal "sources" (outputs from) appear on the upper row of a row pair; and all "loads" (inputs to) appear on the lower row of a row pair.

B. All audio and video patch panel designation strips shall utilize alphanumeric identifications and descriptive information. The jack position in each horizontal row shall be numbered sequentially from left to right. The horizontal jack rows shall be lettered sequentially from top to bottom. The alphanumeric identification of each jack shall be included on the functional block drawings, as well as on reproductions of these drawings, which shall be mounted in an appropriate location near the patch bays.

3.8 GROUNDING

A. In order to minimize problems resulting from improper grounding, and to achieve the maximum signal-to-noise ratio, the following grounding procedures shall be adhered to:

1. System Grounds:

    a. A single primary "system ground" shall be established for the systems in each particular area. All grounding conductors in that area shall connect to this primary system ground. The system ground shall be provided in the audio equipment rack for the area and shall consist of a copper bar of sufficient size to accommodate all secondary ground conductors.
    b. Under no conditions shall the AC neutral conductor, either in the power panel or in a receptacle outlet, be used for a system ground.

2. Audio Cable Shields:

   a. All audio cable shields shall be grounded at both ends. If a ground loop cannot be eliminated then an isolating transformer shall be utilized. For inter and intra-rack wiring this requires that the shield be connected at both ends. Chassis to rack ground shall be utilized if a ground loop can be detected either audibly or with an oscilloscope.

3. General:

   Because of the great number of possible variations in grounding systems, it shall be the responsibility of the Contractor to follow good engineering practice, as outlined above, and to deviate from these practices only when necessary to minimize crosstalk and to maximize signal-to-noise ratios in the audio, video, and control systems.

   All connectors/terminations shall be isolated from wall plates, rack plates.

3.9 AV CONTRACTOR SYSTEM CHECKOUT

A. Before Acceptance Tests are scheduled, the Contractor shall perform a complete system checkout.

B. Documentation and Verification tests shall be based off “ANSI/InfoComm 10:2013 – Audiovisual Systems Performance Verification”.

1. A verification report shall be issued based on the outcome of the system’s performance. Contractors shall acknowledge conformance to the Standard and include the specific information described therein.

C. The Contractor shall furnish all required test equipment and shall perform all work necessary to determine and/or modify performance of the system to meet the requirements of this specification. This work shall include the following:

1. Provide documentation that all matrix switching cross-points have been tested and verified.
2. Test all audio and video systems for compliance with the Performance Standards, using the following test equipment for each input and circuit:

   a. Video:

      1) Quantum Data 780 Category cable tester, required for HDBT cable compliance
      2) Sencore Optical Tri-stimulus Color OTC100 Analyzer or newer, when required. (Video display calibration for LCD and projector units)
      3) Video test signal generator, Extron VTG 400 DVI, required.
      4) Professional Blu-ray player (HDMI), with associated AV Blu-ray test discs
      5) Computer with the following outputs:

         a) HDMI
         b) DisplayPort++
         c) VGA w/ stereo 3.50 mm jack

b. Video cable

1) Set of 75.0 Ω terminators, 'T' pieces, set of video adapter connectors (such as RCA-BNC, BNC-RCA),
2) Assorted prewired cables including DVI-D, DisplayPort, HDMI, VGA, CAT6A

3. High Resolution Signals:

a. Connect the video output of the signal generator to all possible source connection points (i.e. floor-box, poke-thru, wall plates, table cubby, head-end rack) and select the SMPTE, PLUGE, Moiré signals at various video resolutions and scan rates. The example resolutions listed below are typical resolutions. All resolutions that are applicable to the project must be tested to ensure correct operation.
b. The contractor shall provide to the AV Engineer one (1) week prior to acceptance testing, a copy of the following test results in electronic format in order to verify the AV video equipment has been installed and configured correctly:

The number of HDCP KSVs Keys supported by each source.

1) The video timing, HDCP use and audio format of each source when operating.
2) The video timings and supported audio formats for each connected sink.
3) The video timings and supported audio formats presented in the EDID to each source – the preferred video timing shall be indicated.
4) The length of cable used on all shielded twisted pair cable used for AV distribution.
5) The data rate supported by each shielded twisted pair cable used for AV distribution.

c. Check that the image is correctly displayed on the video monitors and/or the video projector.
d. Test each input using Crosshatch signal, checkerboard signal, Moiré and "H" pattern signals at the scan rates indicated in items above.
e. Repeat tests for analog RGBHV and other signals at each connection location.

4. Blu-ray / Universal Format Players

a. Insert the pre-recorded disc into the deck and check operation of the control panel's transport controls as well as picture image quality. Also check that the audio signal is heard from the left and right speakers.
b. Check that the transport controls are logically presented on the touch screen GUI.
c. Re-select the SMPTE & PLUGE signal output of the video signal generator.
d. Check that the audio and video signals are recorded and can be played back on the picture monitor(s) and/or the video projector and the left and right speakers.

5. Audio check:

a. Class 1 spectrum analyzer must be capable of site calibration and verifiable test results. No exceptions.
b. Audio Precision P1PLUS Audio Analyzer or equivalent.
c. Waveform signal generator: frequency sweep, pink noise and other pertinent test signals
d. Compact, or Blu-ray discs, one technical (containing frequency sweeps, white noise, pink noise) and one music/program material.

6. Audio cable assortment

    a. Set of terminations, adapters
    b. Adjust all systems (starting at source equipment and terminating at the power amplifiers) for maximum gain and minimum distortion.
    c. Connect the output of the audio signal generator to a floor-box/table cubby/rack 'Left' and 'Right' connectors, or the 3.50 mm stereo mini connector and select the 1.00 kHz tone. Check that the signal is emitted from the left and right program speakers in the correct orientation.
    d. Repeat items for other audio connection locations.

D. At the conclusion of the tests, return all equipment settings to previously calibrated positions.

1. Submit documented records of all test results in spreadsheet form.
2. Check all control functions, from all controlling devices to all controlled devices, for proper operations.
3. Adjust, balance, and align all equipment for optimum quality and to meet the manufacturer's published specifications. Establish and mark normal settings for all level controls, and record these settings in the "System Operation and Maintenance Manual".
4. Check all optical projection images for average light level, light fall-off, and image alignment and size to comply with the Performance Standards and specifications drawings. Check to determine that all projectors, projector bases, carts, tables, and mirrors are rigid and vibration-less in operation.
5. Maintain documentation of all performance tests for reference by the AV Engineer during the System Acceptance Tests.
6. The Contractor shall forward to the Architect and the AV Engineer a complete list of test equipment available to the AV Contractor for the Testing and Commissioning indicating the equipment type (i.e. 1/6th octave real time analyzer, 1/12th octave fast Fourier transform (FFT) analyzer, video test signal generator.) including manufacturer's name, model number, and relevant calibration information. If such test equipment is capable of multiple comprehensive automated tests, the Contractor shall detail the complete range of tests that the equipment can perform.
7. The Contractor shall forward to the Architect and to the AV Engineer a complete description of the Testing and Commissioning procedure, which the Contractor will use. This must include a complete description of the equipment connections, locations of measuring equipment, locations of transducers (loudspeakers, microphones, optical measuring tools), locations of signal generators and methodology for establishing the testing procedure.

E. The following list of Test Equipment is not exhaustive, but it known that a successful A/V installation of the type specified here cannot be properly commissioned without the Contractor using the following list of Test Equipment/functions:

1. True RMS Voltmeter with measurements in decibels, linear to 100 kHz, required (i.e. Fluke 8060A or equivalent).
2. 250 MHz dual trace oscilloscope, with external video trigger capabilities, required.
3. 1/6th Octave Real Time Acoustical Analyzer, with a minimum of six (6) curve integration averaging or 1/6th Octave filter set for Integrating Type 1 sound level meter, both with microphone calibrator, required.
4. Pink and white noise, sine wave (variable frequency) and sweep generator, with variable output: -60.0 dB-V to +4.00 dBm, required.
5. Loudspeaker line impedance meter, with readouts at ISO octave band frequencies, required.
6. Loudspeaker phase meter- clicker, required.

7. Audio signal test measurement set, for measurement of Signal to Noise ratio (S/N), Total Harmonic Distortion (THD), inter modulation distortion, frequency response (both electrical and acoustical), phase response, wow and flutter and impedance versus frequency (i.e. Audio Precision One, Neutrik A2-D units are recommended).
8. Acoustical test set, for measurement of RT60, early to late reflections ratio, loudspeaker polar and frequency response, loudspeaker time alignment/delay, STI-PA, (i.e. MLSSA, CLIO, B&K class 1 type units).
9. Data cable sweep generator: Perform and document certification testing all AV related CAT5e, CAT6a TP cables used for the distribution of AV and control signals. (See Division 27 Communications specification sections for requirements)

F. Test all audio for compliance with the Performance Standards.

1. Provide the AV Engineer “Before” and “After” spreadsheet and graphical frequency response test results for a representative quantity of each speaker type or zone, a minimum of one (1) week prior to the final acceptance site testing.
2. Check all control functions, from all controlling devices to all controlled devices, for proper operation.

G. Adjust, balance, and align all equipment for optimum quality and to meet the manufacturers’ published specifications. Establish and mark normal settings for all level controls and record these settings in the "System Operation and Maintenance Manual".

H. Loudspeaker Equalization:

1. General Testing and Adjustments

a. Test each loudspeaker circuit or zone extensively and individually for uniform Sound Pressure Levels and adjust the system as necessary.
b. Perform all tests and adjustments required to obtain specified performance. Tests and adjustments shall be performed under the following conditions:
c. When all ceiling tiles, acoustical sound screens, furniture, and all other items are in their final position and ready for personnel. HVAC and lighting shall be operating at normal conditions.
d. Fine-tuning of equalization system may also be needed to accommodate any inconsistencies in interior layout as the curve described below was constructed for an ideal open office environment. Consult this specification for the specific equalization curve to use once furniture installation has taken place.
e. Using an AC impedance meter or bridge, measure all loudspeaker circuit’s impedance at 1.00 kHz while disconnected from the amplifier output and note the data. This will assure that the speaker circuits are free of faults and will not overload the amplifier.
f. Measure the ambient sound level in 1/3rd octave bands with all HVAC systems and lights on. Record data as 1/3rd octave band readings. Also measure and record the ambient sound level as a single wideband "A" weighted (dB-A) reading.
g. With the pink noise (or sweep generator) off and power amplifier on, and with all volume controls set an 80.0 % rotation (or +80.0 dB) in all areas, the system hum and noise must be inaudible. Any mechanical rattles or audio distortion must be corrected at this time.
h. Apply the pink noise or sweep generator signal to system and adjust for a working level for the equalization of the system of at least +20.0 dB above ambient sound level. Staff must use ear protection.
i. Check for uniformity of coverage by measuring utilizing a 32-band 1/6th octave Class 1 spectrum analyzer. The level in all areas must not deviate more than +/- 2.00 dB-A. Correct any out of tolerance deviations before proceeding.

j. Document all findings and resultant frequency curves and graphs for each of the zone channels.

2. System Ring-out (Feedback reduction): Once the sound system has been equalized to obtain a flat response, ring-out each microphone input using the following procedure or similar:

a. Attach oscilloscope to the output of the sound system
b. Put on ear protection.
c. Turn on one (1) microphone
d. Raise system volume unit feedback begins.
e. Use the oscilloscope to find the largest peak.
f. Add a very narrow parametric filter to “notch” out that frequency on the corresponding microphone channel.
g. Repeat feedback procedure to eliminate several feedback frequencies. When using wireless microphones, be sure to walk about the space to excite other potential feedback frequencies.
h. Once feedback has been essentially eliminated from that microphone, (in software) add a compression module or block with moderate compression ratio, attack and release settings. When the microphone is used the effect shall not be noticeable.
i. Verify that the compression algorithm has not altered the feedback suppression in place.
j. Test next microphone input(s) using the same general procedure.

3.10 SYSTEM ACCEPTANCE TESTS

A. Contractor shall notify Architect / Owner and AV Engineer of intent to test a minimum of (2) weeks prior to proposed test date.

B. System Acceptance Tests shall be conducted with the Architect / Construction Manager / Owner (or their representatives) and the AV Engineer present as witness.

C. In the event further adjustment is required, or defective equipment must be repaired or replaced, tests may be suspended or continued at the option of the AV Engineer, Architect, and/or the Owner. The Contractor can and shall be responsible for the AV Engineer’s expenses such as, but not limited to: lodging, travel, airfare, and the AV Engineer’s billable time.

END OF SECTION

APPENDIX 1 - EQUIPMENT SCHEDULE

NOTE: All product numbers indicated below were coordinated with the benchmark manufacturers prior to document issuance. However, the AV Contractor shall verify that all listed product numbers comply with the performance requirements indicated within this specification section and that all products submitted are the most current products offered by the manufacturer.

Table 1 – Audio Visual Products			
Item	Part Name/Description	Manufacturer	Part Number
Wellness Center			
1	65” Flat panel display	Samsung	QB65B
2	Display wall mount	Chief	MTM1U
3	In-wall back box	Chief	PAC526
4	Apple TV	Apple	Apple TV 4K
5	Loudspeakers	Biamp	CM60DTD
6	Amplifier	Crown	DCI 2|300
7	DSP	Biamp	TESIRA FORTE DAN AI
8	Bluetooth wall plate	Atterotech	UnD6IO-BT
9	Media player	Bluesound	B100S
10	Control Processor	Crestron	RMC4
11	Control Panel	Crestron	TSW-1070-X-S
Elevator Lobbies / Wayfinding Displays			
1	85” Flat panel display	Samsung	QB85B
2	Display wall mount	Chief	LTM1U
3	In-wall back box	Chief	PAC526
4	Wayfinding digital signage player	Brightsign	XD SERIES
5	HDMI patch cables	Crestron	CBL-HD
Atrium			
1	Loudspeakers	Biamp	CM60DTD
2	Loudspeakers	Biamp	MASK2
3	Amplifier	Crown	DCI 4|300
4	Media player	Bluesound	B100S
5	Assisted Listening System	Sennheiser	MOBLIE CONNECT
6	ALS connection tablet	Lenovo	TAB M8
7	DSP	Biamp	TESIRA FORTE DAN AI
8	XLR and AUX wall plate	Biamp	D-ALINP
9	Wired Microphone w/ Podium Mount	Sennheiser	E 935
10	Wireless microphone Receiver	Sennheiser	SL MCR 2 DW-2
11	Wireless microphones	Sennheiser	865 DW-4-US
12	WM charging station	Sennheiser	CHG-2N US
13	Control Processor	Crestron	CP4N
14	Control Panel	Crestron	TSW-1070-X-S

Judge's Chamber			
1	65" Flat panel display	Samsung	QB65B
2	Display wall mount	Chief – Articulating	TS325TU
3	In-wall back box	Chief	PAC526
4	Video conferencing soundbar	Polycom	X30
5	USB Mouse (Bluetooth)	HP/Logitech or equal	N/A
6	Wireless presentation	Crestron AirMedia	AM-3200
7	HDMI patch cables	Crestron	CBL-HD
8	Table box HDMI interface (passthrough or plate)	Crestron	FT2 Series or equal. Coordinate with furniture.
9	HDMI Transmitter	Crestron DM Lite	HD-TXU-4KZ-211-CHGR
10	HDMI Receiver	Crestron DM Lite	HD-RX-101-C-E
Judge's Workroom			
1	65" Flat panel display	Samsung	QB65B
2	Display wall mount	Chief	MTM1U
3	In-wall back box	Chief	PAC526
4	Video conferencing soundbar	Polycom	X30
5	Wireless presentation	Crestron AirMedia	AM-3200
6	HDMI patch cables	Crestron	CBL-HD
7	Table box HDMI interface (passthrough or plate)	Crestron	FT2 Series or equal. Coordinate with furniture.
8	HDMI Transmitter	Crestron DM Lite	HD-TXU-4KZ-211-CHGR
9	HDMI Receiver	Crestron DM Lite	HD-RX-101-C-E
10	Control Panel	Polycom	TC10
Small Conference Rooms, Small Mediation Rooms			
1	75" Flat panel display	Samsung	QB75B
2	Display wall mount	Chief	LTM1U
3	In-wall back box	Chief	PAC526
4	Video conferencing soundbar	Polycom	X52
5	Wireless presentation	Crestron AirMedia	AM-3200
6	HDMI patch cables	Crestron	CBL-HD
7	Table box HDMI interface (passthrough or plate)	Crestron	FT2 Series or equal. Coordinate with furniture.
8	HDMI Transmitter	Crestron DM Lite	HD-TXU-4KZ-211-CHGR
9	HDMI Receiver	Crestron DM Lite	HD-RX-101-C-E
10	Control Panel	Polycom	TC10
11	Room Scheduler	Crestron	TSS-770-X-S-LB-KIT
Medium Conference Rooms, Medium Mediation Rooms			
1	85" Flat panel display	Samsung	QB85B
2	Display wall mount	Chief	LTM1U
3	In-wall back box	Chief	PAC526

4	Video conferencing system	Polycom	G7500
5	PTZ camera	Polycom	Studio E70
6	Wireless presentation	Crestron AirMedia	AM-3200
7	Loudspeakers	Biamp	CM60DTD
8	Amplifier	Crown	DCI 4|300
9	DSP	Biamp	Tesira Server I/O
10	Microphone	Shure	MXA920
11	Control Processor	Crestron	CP4N
12	HDMI patch cables	Crestron	CBL-HD
13	Table box HDMI interface (passthrough or plate)	Crestron	FT2 Series or equal. Coordinate with furniture.
14	NDI to HDMI Converter	Birddog	FLEX4KOUT
15	Encoder/Decoder Chasis	Crestron w/ Cards	DMF-CI-8
16	HDMI Encoder	Crestron NVX	DM-NVX-363
17	HDMI Decoder	Crestron NVX	DM-NVX-363
18	Control Panel	Polycom	TC10
19	Room Scheduler	Crestron	TSS-770-X-S-LB-KIT
Large Conference Rooms, Large Mediation Rooms			
1	85” Flat panel display	Samsung	QB85B
2	Display wall mount	Chief	LTM1U
3	In-wall back box	Chief	PAC526
4	Video conferencing system	Polycom	G7500
5	PTZ camera	Polycom	Studio E70
6	Wireless presentation	Crestron AirMedia	AM-3200
7	Loudspeakers	Biamp	CM60DTD
8	Amplifier	Crown	DCI 4|300
9	DSP	Biamp	Tesira Server I/O
10	Microphone	Shure	MXA920
11	Control Processor	Crestron	CP4N
12	HDMI patch cables	Crestron	CBL-HD
13	Table box HDMI interface (passthrough or plate)	Crestron	FT2 Series or equal. Coordinate with furniture.
14	NDI to HDMI Converter	Birddog	FLEX4KOUT
15	Encoder/Decoder Chasis	Crestron w/ Cards	DMF-CI-8
16	HDMI Encoder	Crestron NVX	DM-NVX-363
17	HDMI Decoder	Crestron NVX	DM-NVX-363
18	Control Panel	Polycom	TC10
19	Room Scheduler	Crestron	TSS-770-X-S-LB-KIT
Public Meeting Rooms			
1	85” Flat panel display	Samsung	QB85B

2	Display wall mount	Chief	LTM1U
3	In-wall back box	Chief	PAC526
4	Loudspeakers	Biamp	CM60DTD
5	Amplifier	Crown	DCI 4|300
6	DSP	Biamp	Tesira Server I/O
7	Control Processor	Crestron	CP4N
8	HDMI patch cables	Crestron	CBL-HD
9	Table box HDMI interface (passthrough or plate)	Crestron	FT2 Series or equal. Coordinate with furniture.
10	NDI to HDMI Converter	Birddog	FLEX4KOUT
11	Matrix Switcher	Crestron	HD-RX-4K-410-C-E-SW4
12	HDMI Transmitter	Crestron DM Lite	HD-TXU-4KZ-211-CHGR

APPENDIX 2 – SPECIFICATION COMPLIANCE MATRIX TEMPLATE

Indicate compliance of the proposed equipment and/or services by the word "Comply" following each paragraph number. Indicate an exception to the requirement by the word "Exception" following the applicable paragraph number. Should the proposed equipment and/or services not entirely comply with the requirements specified, but ultimately achieve the intent, the Bidder shall explain fully the extent, or lack thereof, of compliance for the applicable equipment and/or services proposed. Instances where there is no indication of compliance or exception shall be considered non-compliant.

Contractor shall submit Compliance Matrix with the Bid Proposal AND at the time of Product Data submittal (as indicated previously in this specification) so that a complete system submittal reviewed can be performed. Contractor shall use the following template to create a full Compliance Matrix for each specification section.

	COMPLIANCE	**EXPLANATION**
PART 1		
1.1		
A	COMPLY	
B	EXCEPTION	Note clarifications and/or reason for exception here.
C	COMPLY	
1.2		
A.1	COMPLY	
A.2	COMPLY	
B	COMPLY	
C.1	COMPLY	
C.2	COMPLY	
D.1a	COMPLY	
D.1b	COMPLY	
D.2a	COMPLY	
xx	COMPLY	
xx	COMPLY	

APPENDIX 3 – PRODUCT DATA & SHOP DRAWING SUBMISSION CHECKLIST

NOTE: Contractor shall utilize checklist below to ensure comprehensive product data and shop drawings are submitted for review, including submittals compiled between multiple sub-contractors (as applicable). This checklist is intended help establish submittal expectations specific to each specification section and to serve as a pre-check document for each contractor. Refer to submittal section of these specifications for additional requirements.

	GENERAL ITEMS:
	Compliance matrix
	Proposed project schedule (procurement, installation, final testing/punch, etc.)
	PRODUCT DATA:
	Manufacturer warranty information
	Equipment component list
	Equipment specification sheets
	SHOP DRAWINGS
	27 41 00
	All Div.27 AV submittal sections to be submitted together
	Legend: indicate symbol key, labeling scheme, scope clarification notes, etc.
	One-lines: indicate detailed connectivity one-lines depicting all components, wiring, connections, etc.
	Site plan: indicate OSP cable routes, device locations, light and/or speaker poles, etc.
	Floor plans: indicate component locations and sizes (racks, raceway, active components, etc.),
	device labels, typical conduit / cable paths, etc.
	RCPs: indicate current ceiling layer, ceiling device placement, lifts, access hatches, etc.
	Elevations: indicate AV rack elevations with detailed equipment layouts
	Details: indicate final connection plate details, equipment mounting details, etc.
	27 41 40
	All Div.27 AV submittal sections to be submitted together
	Legend: indicate symbol key, labeling scheme, scope clarification notes, etc.
	One-lines: indicate detailed connectivity one-lines depicting all components, wiring, connections, etc.
	Floor plans: indicate device locations, device labels, cable types and distances, back-box sizes, etc.
	Elevations: indicate wall elevations with detailed equipment layouts (amps, splitters, taps, etc.)
	Details: indicate final connection plate details, equipment mounting details, etc.

SECTION 27 53 20 - DISTRIBUTED ANTENNA SYSTEMS GENERAL REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

B. This 27 53 20 specification section is intended to cover requirements that apply to multiple wireless systems including Cellular, Emergency Responder Radios, and Facility Radios. Not all requirements noted within this specification section are applicable to all three systems. Refer to the specification section 28 50 20 for additional requirements specific to the Emergency Responder Radio Systems (ERRS).

1.2 SUMMARY

A. The awarded DAS Provider / Vendor shall provide a neutral-host, carrier grade, carrier approved DAS that meets the most current Cellular Carrier requirements for coverage and capacity. Additionally, DAS shall meet or exceed current league and/or sports venue industry standards from a wireless coverage and capacity standpoint, including latest fan facing bandwidth recommendations for both upload and download speeds to mobile devices.

B. The awarded DAS Provider / Vendor may also be selected to provide Emergency Responder Radio Systems (ERRS) and Facilities Radio Systems (FRS) that are independent of the cellular DAS, given the more stringent NFPA code requirements for pathway survivability. (Note: If DAS Provider elects to share select DAS components such as fiber optic backbone or remote units, this shall be included as an alternate for consideration as part of the RFP response.)

C. The Contractor shall provide all necessary MEP support systems associated with fit-out of Wireless Equipment Room (WER) including HVAC, power distribution, and fire suppression to support DAS head-end and distribution equipment. (Note: MEP support systems in intermediate Telecom Rooms (TR) have been included in the base building cost, but any additions or upgrades required by the DAS will shall be provided at DAS Vendors' cost.)

D. Contractor shall provide all necessary legal contracts, coordination and service requirements with Cellular Carriers. These shall include but not be limited to all DAS technical requirements necessary to interface with originating base stations, transport the signal, and transmit the signal throughout building and exterior.

E. Reference to Distributed Antenna System shall be referred to as DAS from this point forward.

F. Reference to Emergency Responder Radio Systems including Fire Department, Police Department, Ambulance, First Responders, and any other Emergency Responder shall be referred to as ERRS from this point forward.

G. Reference to Facility Radio Systems including Building Operations and Security shall be referred to as FRS from this point forward.

H. Reference to Contractor, Installer, Integrator, Vendor, and/or Manufacturer shall be referred to as Contractor from this point forward.

I. The term “provide” used throughout this specification and drawings shall mean “furnish, install, test, and certify”.

J. The Contractor shall provide complete procurement options for system cost, installation, support, warranty, revenue share, and Cellular Carrier contract options to the Owner. Procurement options may include Owner Operated, Contractor Operated, leasing, etc.

K. Contractor shall fully coordinate with Authority Having Jurisdiction (AHJ) including all necessary system requirements, frequency allocations reviews, and approvals frequency allocations with Building Department, Fire Department, Police Department, and/or other departments for determining ERRS. The AHJ may require a separate DAS for ERRS and Contractor shall provide system as required.

L. This project may be implementing a phased construction schedule. The Contractor shall meet with the Owner and Construction Manager (CM) to review the construction schedule and associated areas of work. All necessary labor, cable, terminations, components, and equipment shall be provided to accommodate temporary, phased, and final conditions as required.

M. Contractor shall coordinate project schedule, installation schedule, phasing and any other requirements deemed necessary with Owner, CM, and all necessary Trades to ensure successful completion of work.

N. Phasing, temporary distribution/equipment, cut-over and implementation shall be coordinated with Owner, CM, and Architect.

O. This specification is not intended to contain proprietary information or requirements based on any specific Vendor and/or Manufacturer system or approach. Any proprietary information included in this specification is unintentional.

P. Contractor shall design, furnish, install, and configure a turnkey DAS, Cellular Carrier interfaces, ERRS, and FRS head-end equipment, and system management and monitoring software. Work shall include all necessary radio frequency design, fiber optic backbone, DAS system components and installation thereof required including raceway, cable, cable terminals, transceivers/media converters, amplifiers, equipment, fireproofing, etc. for a fully operational and functional DAS.

Q. The DAS shall include all head-end equipment, base station equipment, amplifiers, signal repeaters, PSTN backhaul, and DAS interfaces for Emergency Responders (Police, Fire, and EMS) and Facility two-way communications radio systems.

R. The DAS shall include a real-time management and monitoring software control system. This control system shall be set up and fully configured.

S. This work shall include but not limited to onsite wireless/RF studies, virtual antenna placement, physical design of DAS, submittals, physical coordination, equipment, and installation.

T. An onsite wireless/RF study shall be provided by Contractor to establish existing signal strengths and potential interfering sources including Cellular Carrier, Emergency Responder, and Facility Radio requirements and radio frequencies.

U. The DAS design shall be (virtually) developed, modeled and optimized using wireless computer software such as iBwave for establishing antenna locations based on electronic architectural drawings and various wireless frequency bands. Construction materials shall be inputted into the software program for structure, walls, floors, and ceilings.

V. The DAS wireless coverage and signal strength shall be field tested and verified, certified, and guaranteed upon installation against design requirements including coordination with Cellular Carriers and Emergency Responders.

W. The DAS shall be designed to support and fully connect Cellular Carriers and Service Providers such as AT&T, Sprint/Nextel, T-Mobile, and Verizon Wireless and other local Cellular Carriers.

X. The Contractor shall coordinate support systems requirements directly required by the DAS such as architectural, HVAC, electrical, and technology systems.

Y. Placement of any equipment including antennas, cable, and electronics shall be coordinated with Owner, Architect, Engineer, Construction Manager, and other Construction Trades to ensure neat and functioning installation.

Z. All antenna locations and cable routing shall be coordinated by the Contractor with the Owner, Architect, ME Engineers, and Construction Manager prior to installation to maintain the highest level aesthetics sought on this project. The Contractor shall position antennas discreetly. Contractor shall provide mockups for each unique mounting and routing condition for Owner and Architect approval including associated shop drawings and references for each location.

AA. The installation of the DAS system shall comply with all local building codes, and applicable rules and regulations of the AHJ, FCC, BICSI, EIA, IEEE, NEC, TIA, UL, IFC, NFPA and other industry standards, codes, and methods.

BB. Any DAS distribution through exposed public areas shall be routed in continuous conduit painted (or stealth) to match surrounding background or conditions. All such conditions shall be approved by Owner, Architect, and ME Engineers prior to initiating any work.

CC. Extent of DAS work is indicated by Division 27 Specifications and Technology DAS (TD) drawings and schedules and is hereby defined to include, but not by way of limitation, the provisions of:

1. The Contractor shall provide all necessary DAS equipment, head-end room fit-out, power supply equipment and cabling, backbone and horizontal cabling and raceway systems and all grounding required for the DAS. Select components have been planned for and included in the base building design at no cost to the DAS Provider. This includes, but is not limited to, space allocation in Telecom Rooms (TR), cable tray and major backbone conduits to connect DAS head-end room to all building TRs, and in some cases select conduit segments to cross concourses or feed up to top of seating bowl or canopy. (Refer to Technology DAS “TD” drawings for additional information.)
2. The Contractor or their Sub-Contractor performing work shall determine how the scope of work is assigned. The purpose of this specification is to establish design intent and general system scope.
3. All physical cable management hardware including, but not limited to: “Butterfly” clips attached to exposed steel or concrete, “J-hooks” in accessible ceiling areas, “D-rings” on backboards, horizontal managers in racks and cabinets within equipment rooms, etc.
4. Fire stopping as required.
5. Testing of system, components, and infrastructure as noted by specification, drawings, and applicable industry standards.

6. Testing of all grounding systems as noted by specification, drawings, and applicable industry standards.
7. Labeling of all system equipment, components, hardware, cable, and terminations with mechanically printed labels.
8. Preparation and submission of product data, shop drawings, testing reports, as-built drawings, and cabling documentation as required in this specification.
9. Construction and Installation warranties.
10. Manufacturer components, channel and solutions warranties.
11. Installation and testing of all system and components.
12. Preparation of maintenance plan recommended by system Manufacturer.

1.3 ACRONYMS AND ABBREVIATIONS

A. Provided below is a general list of typical acronyms and abbreviations:

1. 3G: Third Generation mobile telecommunications
2. 4G: Fourth Generation mobile telecommunications
3. 5G: Fifth Generation mobile telecommunications
4. AHJ: Authority Having Jurisdiction
5. ARPU: Average Revenue Per User
6. BICSI: Building Industry Consulting Services International
7. BTS : Base Transceiver Station
8. CD: Construction Documents or Contract Documents
9. CDMA: Code Division Multiple Access
10. CM: Construction Manager
11. DAS: Distributed Antenna System
12. ERRS: Emergency Responder Radio System(s)
13. FCC: Federal Communications Commission
14. FRS: Facilities Radio Systems
15. GC: General Contractor
16. GPS: Global Positioning System
17. GSM: Global System for Mobile Communications
18. iDEN: Integrated Digital Enhanced Network
19. IEEE: Institute of Electrical and Electronics Engineers
20. LMR/SMR: Land Mobile Radio/Specialized Mobile Radio
21. LTE: Long Term Evolution mobile broadband telecommunications
22. MEP: Mechanical, Electrical and Plumbing Systems
23. MEPT: Mechanical, Electrical Plumbing, and Technology Systems
24. MTR: Main Telecom Room (commonly referred to as MDF)
25. MIMO: Multiple Input / Multiple Output
26. NEC: National Electrical Code
27. PoE: Power over Ethernet
28. POI: Point of interface
29. PSTN: Public Switched Telephone Network land based telecommunications providers i.e. Telephone Company.
30. RF: Radio Frequency
31. SHF: Super High Frequency (3-30 GHz)
32. SISO: Single Input / Single Output
33. TDMA: Time Division Multiple Access
34. TR: Telecom Room (commonly referred to as IDF)
35. UHF: Ultra High Frequency (300-3000 MHz)
36. VHF: Very High Frequency (30-300 MHz)
37. WCDMA: Wideband Code Division Multiple Access

38. WER: Wireless Equipment Room
39. WLL: Wireless Local Loop

1.4 SUBMITTALS

A. General Description and Requirements:

1. In addition to the requirements noted herein, refer to base RFP document and Division 1 Specification (as applicable) for additional requirements.

B. Revenue Models: Contractor shall provide cost models and options for revenue sharing to Owner from contracts with Cellular Carriers.

C. Product Data: The DAS Product Data Submittal shall be submitted for review and approval by Owner, Architect, and ME Engineers prior to starting any work. Information shall include detailed parts list for all components and manufacturer's product data for each component to be installed.

D. Virtual Wireless Model: After project award, provide plan drawings based on architectural background or model indicating device and antenna placement based on wireless modeling computer software. Construction materials shall be inputted into the software program for structure, walls, floors, and ceilings as well as radio frequencies, zones, and capacity to help predict coverage and placement of antennas and associated coverage patterns. Information submitted shall include coverage drawing (heat map) as well as placement of antennas, equipment, and associated cable routing, etc. Models shall be developed using iBwave or equivalent industry recognized software.

E. Field Test Reports: Indicate and interpret test results for compliance with performance requirements of installed systems as well as acceptance by all Cellular Carriers and Emergency Responders.

F. Commissioning: The Contractor shall complete commissioning of the system and issue a final report. Commissioning shall be performed upon completion of system, and after its testing and retuning. Report shall be completed and finalized by the Contractor prior to system acceptance by Cellular Carriers and Owner. A formal report shall be generated that includes sign-off and notes of all checklist items.

G. Warranties: The Contractor shall provide a warranty on all parts, components, and labor Warranty period shall start based on acceptance by Owner upon completion, testing and acceptance of the installation by the Wireless Carriers. Refer to section 1.12 Warranty for additional requirements including time durations.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: The installation supervisor for both installation and maintenance of units required for this Project must be an experienced installer who is an authorized representative of the DAS Vendor.

1. Contractors shall have at least five (5) years of successful installation experience with projects utilizing wireless systems including DAS.
2. The company shall be a certified installer of the DAS manufacturer, and shall provide a 1-year warranty on installation/applications.

B. Electrical Components, Devices, and Accessories: These shall be listed and labeled as defined in NFPA 70, NEC, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use. All materials shall be Underwriters Laboratories (UL) Listed unless otherwise noted or required by AHJ.

1.6 CODES AND STANDARDS

A. All work including materials and installation shall conform to all applicable sections of currently adopted editions of the codes and standards listed below or the codes, standards and specifications published by the organizations listed below:

1. Uniform Building Code (UBC).
2. State and local codes.
3. ANSI: American National Standards Institute (ANSI).
4. ANSI/EIA/TIA standards as applicable to DAS.
5. ASTM: American Society for Testing and Materials
6. BICSI TDM Telecommunications Distribution Methods Manual (current edition).
7. BICSI Wireless Design Reference Manual (current).
8. Cellular Carrier Requirements as determined by AT&T, Sprint, T-Mobile, Verizon Wireless, and other local Cellular Carriers.
9. Emergency Responder Requirements as determined by AHJ, Fire Department, Police Department, and Ambulance/EMS.
10. ICEA: Insulated Cable Engineers Association
11. IEEE: Applicable requirements and recommended installation practices of IEEE Standards 80, 81, 141 and 142 pertaining to grounding and bonding of systems, circuits and equipment.
12. IEEE-802.11 a, b, g, n: Wireless Local Area Networks
13. IEEE-802.3: 10Mb/s, 100Mb/s, 1Gb/s, and 10Gb/s Ethernet Standards as applicable based on media types (twisted pair copper, fiber optics, etc.)
14. IEEE-802.3af: Power-over-Ethernet (PoE).
15. IEEE-1100-1999: Recommended Practice for Powering and Grounding Sensitive Electronic Equipment.
16. IEEE-141: Comply with applicable requirements for installation of cable tray systems.
17. IEEE-241: Recommended Practice for Electric Power Systems in Commercial Buildings.
18. IFC: International Fire Code
19. ISO/IEC 11801: International Standard on Information Technology – Generic Cabling of Customer Premises.
20. NEC: Applicable local electrical code requirements of the authority having jurisdiction, and the NEC as applicable to electrical boxes and fittings, cable tray systems, and grounding and bonding, pertaining to systems, circuits and equipment.
21. NESC: National Electrical Safety Code
22. NEMA: Applicable requirements of NEMA Stds/Pub No.'s OS1, OS2 and PUB 250 pertaining to raceways, outlet and device boxes, covers, and box supports.
23. NEMA: NEMA Stds/Pub No. VE 1 "Cable Tray Systems"
24. NFPA-70/NEC: National Electrical Code.
25. NFPA-70B: "Recommended Practice for Electrical Equipment Maintenance" pertaining to installation of cable tray systems.
26. NFPA-72: National Fire Alarm and Signaling Code
27. UL Compliance: Applicable requirements of UL 50, UL 514-series, and UL 886 pertaining to electrical boxes and fittings.

28. UL Compliance: Applicable requirements of UL Standards No.'s 467, Electrical Grounding and Bonding Equipment", and 869 "Electrical Service Equipment", pertaining to grounding and bonding of systems, circuits and equipment. In addition, comply with UL Std 486A, "Wire Connectors and soldering Lugs for Use with Copper Conductors." Provide grounding and bonding products which are UL-listed and labeled for their intended usage.
29. University Design and Construction Standards (Architectural, MEP Systems, Structural, and Technology)

B. Where there is a conflict between the code and the contract documents, the code shall have precedence only when it is more stringent than the contract documents. Items that are allowed by the code but are less stringent than those specified on the contract shall not be substituted.

1.7 PROJECT CONDITIONS

A. Prior to submitting a proposal, the Contractor shall inspect the Contract Documents, and shall become fully informed as to laws, ordinances, and regulations affecting the project. The Contractor shall immediately bring to the Owner, Architect, and Engineer's attention, in writing, any existing condition or statute that contradicts, is in conflict with, or negates the Contract Documents. Failure of the Contractor to become fully informed as to all above mentioned items shall in no way relieve the Contractor from any obligations with respect to its proposal.

B. The Technology Documents and/or RFP schematically depict locations of major equipment and components. Field conditions and coordination with related trades may warrant relocations of field devices. No additional compensation will be allowed due to these revisions.

C. System components and equipment shall be rated for the environments where installed.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Equipment and components shall be delivered in factory-fabricated containers or wrappings, which properly protect equipment from damage.

B. Equipment and components shall be handled carefully to prevent damage including but not limited to breakage, denting or scoring of surfaces, etc. Do not install damaged units or components; replace with new. Replace damaged units or components following installation with new ones.

C. Equipment and components shall be stored in original packaging in a dry, clean, well-ventilated space, and shall be protected from construction traffic, weather, moisture, soiling, humidity, and extreme temperatures.

1.9 SEQUENCING AND HANDLING

A. All work shall be reviewed and coordinated with the Owner and CM or GC prior to commencing.

B. DAS, infrastructure, and equipment are sensitive to environmental conditions including but not limited to temperature, dirt, dust, and water. The contractor shall ensure the storage and installation of all system components are sequenced and scheduled accordingly to prevent any damage, loss of performance, and warranty voiding. All mis-installed components shall be replaced with new parts and re-installed at the contractors' expense.

C. Installation shall be coordinated with Structural, Electrical, HVAC, Plumbing, Fire Protection, and other trades to eliminate disruption and/or conflict with other systems.

D. Installation of DAS and infrastructure shall be sequenced with other work to minimize possible damage and soiling during the remainder of construction.

1.10 COORDINATION

The Contractor shall:

A. Coordinate Work of this Section with the requirements of each wireless service provider.

B. Coordinate layout and installation of DAS equipment, antennas, and radiating cable with other construction that penetrates ceilings or is supported by them, including but not limited to light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.

C. Coordinate location of cabling and antennas with other trades.

D. Coordinate location of equipment in the communications rooms and spaces with the Owner and Architect.

1.11 WARRANTY

A. Awarded Cellular DAS Vendor will own, operate and maintain Cellular DAS, thus be responsible for any warranty requirements to keep the DAS operational per their contract with Venue Owner / Operator and the Cellular Carriers.

B. Awarded ERRS and FRS Vendor will provide each respective system but turn over to Owner to maintain and operate, thus all ERRS and FRS warranty requirements shall comply with Division 1 and as noted in this Section. Any conflicts shall meet the most stringent required unless approved otherwise by Owner.

C. Warranty periods shall be provided on the components noted below and as listed within this section. Contractor shall include in bid / RFP response all standard manufacturer product warranty information, including warranty length for each major component, including but not limited to passive devices (antennas, splitters, couplers, etc.), cabling (coaxial, fiber, and power), active components (remote radios, head-end equipment, etc.) and power supplies (power plants, rectifiers, batteries, etc.).

D. A warranty on the Work shall be provided by the Contractor. If, within warranty time period after the date of final acceptance by Owner of the installation or within such longer period of time as may be prescribed by law or by the terms of any applicable special warranty required by the Contract Documents or provided by a manufacturer, any of the work or equipment is found to be defective or not in accordance with the Contract Documents, the Contractor shall correct it promptly including all parts and labor after receipt of notice from the Owner to do so unless the Owner has previously given the Contractor a written acceptance of such condition. This obligation shall survive termination of the contract. The Owner shall give such notice promptly after discovery of the condition. Such notice shall be provided by Owner representatives, to be identified, either verbally or in writing. Warranty period shall start based on acceptance by Owner upon completion, testing and acceptance of the installation by the Wireless Carriers.

E. The Structured Cabling Manufacturer shall provide a warranty for all communications cable infrastructure components. This warranty shall cover all components including cable, terminations, patch panels, and wiring panels, etc. to maintain the specified performance and physical criteria. Any such components, link, or channel shall be replaced by the Manufacturer at no cost to Owner during this period. The Contractor and Manufacturer shall submit all information and documentation on Warranty.

F. Nothing contained in the Contract Documents shall be construed to establish a shorter period of limitation with respect to any other obligation which the Contractor might have under the Contract Documents or any manufacturer's warranty. The establishment of the warranty time period after the date of final acceptance or such longer period of time as may be prescribed by law or by the terms of any warranty required by the Contract Documents relates only to the specific obligation of the Contractor to correct the work or equipment, and has no relationship to the time within which their obligation to comply with the Contract Documents may be sought to be enforced, nor to the time within which proceedings may be commenced to establish the Contractor's liability with respect to their obligations other than specifically to correct the work or equipment. Warranty period shall start based on acceptance by Owner upon completion, testing and acceptance of the installation by the Wireless Carriers.

G. If system operation is not fully restored during the warranty period within 24-hours, the Owner reserves the right to require the Contractor to provide on-site manufacturer's service technicians at no additional cost.

H. Special warranty specified in this Specification shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

1. Special Warranty for DAS and Components: There shall be a written warranty, signed by the Manufacturer and Contractor agreeing to correct system deficiencies and replace components that fail in materials or workmanship within a specified warranty period when installed and used according to manufacturer's written instructions. This warranty shall be in addition to, and not limiting, other rights Owner may have under other provisions of the Contract Documents.
2. Contractor shall guarantee coverage and fix any coverage gaps or incorrect signal strengths at no cost to the Owner. The Owner will not accept the system at turn-over until the system has been field tested, verified, certified, and guaranteed that coverage limits have been fulfilled.

1.12 BID INFORMATION

A. Instructions to Bidders

1. The following is a partial list of instructions. Bidders shall provide a complete proposal including all information requested in the RFP Document and this specification.
2. Any questions or misunderstanding should be submitted in writing with the bid.
3. Copies of the bid proposal shall be submitted to the Owner, Architect / Engineer and/or Construction Manager as directed by RFP Document for review and approval.

B. Compliance

1. Bidders shall submit a Statement of Qualifications with their bid proposal that shall include the following information:

    a. Company name, address, telephone number and contact person.
    b. Brief company history.

        1) Years in business.
        2) Number of employees.
        3) Location of Headquarters and branch offices, including international locations.

    c. Resumes of key personnel.
    d. Local staffing description (job descriptions and numbers of persons in each position).
    e. Local service capabilities (hours of operation and parts availability).
    f. Technician factory certifications.
    g. Description of local engineering and project management capabilities.
    h. Line sheet listing major suppliers of security equipment.
    i. Annual dollar value of sales, installation and service of each product line carried.
    j. List of all projects and references for all projects completed in the last five years, including a brief project description, location, construction cost, and completion date.
    k. List of references describing five (5) completed projects of similar size and complexity, including names and telephone numbers of the contact persons.
    l. List of references describing similar projects completed in the area and in the last year including names and telephone number of the customer's contact person.
    m. List of similar projects currently under construction in the area including names and telephone numbers of the customer's contact person.
    n. Licensing information.

2. Additionally, bidders shall submit the following information with their bid proposal:

    a. Manufacturer's literature sheets for all standard manufactured items included in the equipment list and as proposed in the Voluntary Alternate Bid form, if applicable.
    b. Workload and capability statements. The statements shall detail projects that will be active during the completion of this project, and the manpower that would be available for this project.
    c. Confidentiality and return statements. The statements shall guarantee that the Contract Documents shall not be copied or distributed physically or verbally. The Contractor shall also assure the Owner that the Contract Documents shall be returned in their entirety upon request. The successful Contractor will be provided with as many copies as requested.

C. Specification Response

1. The Bid Response Documents shall provide an overview and narrative description of the system architecture including but not limited to topology, application point of interfaces, backbone infrastructure, horizontal infrastructure, cables, terminals, amplifiers, repeaters, media converters, taps, splitters, and antennas.
2. The Bid Response Documents shall include all Service Agreements, Warranties, and Guarantees.

3. The Bid Response Documents shall include an implementation schedule and project timelines starting from Contract Procurement to System Turn-Over.
4. The Bid Response Documents shall include expected annual maintenance costs, consisting of:

    a. Annual maintenance cost beyond expiration of warranty.
    b. Annual maintenance for any items required outside of warranty.
    c. Annual maintenance for each year up to 5-years following the warranty period.

5. The Bid Documents shall include completion of Appendix-A: Additional Bidder Questions
6. The Bid Document shall include completion of Appendix-B: Bidder's DAS Design Assumptions

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, products and solution shall be provided by one of the following DAS Manufacturers:

1. Commscope/Andrew
2. Corning/Mobile Access
3. Solid Technologies
4. TEKO
5. Approved Equal. Refer to 2.11 Alternates for additional requirements.

2.2 DISTRIBUTED ANTENNA SYSTEM (DAS)

A. General Requirements:

1. The Commercial / Cellular DAS shall be a neutral-host, carrier grade, carrier approved DAS that meets the most current Cellular Carrier requirements for coverage and capacity. Additionally, DAS shall meet or exceed current league and/or sports venue industry standards from a wireless coverage and capacity standpoint, including latest fan facing bandwidth recommendations for both upload and download speeds to mobile devices.
2. The Emergency Responder Radio Systems (ERRS) shall provide handheld 2-way radio coverage and capacity to first responders for all applicable authorities and required frequencies as indicated in the RFP and coordinated with the Owner and Architect / Engineer. The ERRS proposed design shall be reviewed with AHJ to ensure compliance with all local adopted code requirements including, but not limited to, IFC and NFPA.
3. The Facility Radio Systems (FRS) shall provide handheld 2-way radio coverage and capacity for all applicable user groups and required frequencies as indicated in the RFP and coordinated with the Owner and Architect / Engineer.

B. System Components:

1. This is a performance based specification thus Contractor and/or their designated RF design engineer shall propose full system design including but not limited to all passive and active devices such as antennas, coaxial and fiber optic cabling, jumpers, splitters, taps, couplers, filters, combiners, remote units, radio heads, and head-end components. If full RF design is not submitted with RFP response, Contractor shall at a minimum include high level concept design including proposed zone / sector count with proposed OEM cutsheets.
2. Contractor and/or their designated power design engineer shall propose full system design including but not limited to power supplies, chassis, cabling, terminals, rectifiers, battery back-up, grounding, etc. If full power design is not submitted with RFP response, Contractor shall at a minimum include high level concept design including proposed power supply rack locations with proposed OEM cutsheets.

C. Management and Monitoring System:

1. The DAS shall be installed with Management and Monitoring System.
2. The Management and Monitoring System shall provide for interactive interfaces to all major DAS electronic and passive components including base head-end, remote units, antenna points, and power supplies.
3. The Management and Monitoring System shall allow for real-time remote management and monitoring of the DAS from an Operator's computer workstation.

2.3 MECHANICAL, ELECTRICAL AND PLUMBING SUPPORT SYSTEMS

A. General

1. Contractor shall provide full fit-out of MEP support systems required to support DAS at Equipment Rooms and throughout Facility.

    a. DAS head-end room is currently a shell space or included in base design as an "add alternate" from a cost perspective. Full cost to provide DAS head-end room fit-out including, but not limited to MEP support systems and architectural modifications (i.e. door, wall, floor, ceiling, sub-roof, etc.) is the responsibility of the DAS provider.
    b. Intermediate TRs will have MEPT support systems provided by base project but any system capacity additions (power, HVAC, etc.) will be the responsibility of the DAS provider.

2. Contractor shall provide all necessary MEPT support systems to maintain appropriate DAS operation and performance as determined by DAS Manufacturer.

B. Mechanical Systems

1. Contractor shall provide all necessary HVAC systems including air-conditioning at head-end equipment room and any supplemental systems or increased system capacity (if required) at MTR, TRs, and any other equipment locations.

C. Electrical Systems

1. Contractor shall provide all necessary Power Distribution including generator, panel boards, feeders, circuits, and receptacles to connect DAS and associated MEPT support systems necessary and provided as part of this. Contractor shall coordinate such requirements with Owner and Architect to confirm spare capacity of any existing systems as well as upgrades or replacement being developed for base building project.
2. Contractor shall provide sub-meters for power panels in head-end room for general DAS head-end equipment, room MEPT support systems and for each Cellular Carrier.
3. Contractor shall provide UPS equipment to maintain uptime of DAS system during failover from normal power to generator power. This includes head-end, remote equipment, power supplies, and any other DAS equipment requiring uninterrupted power.
4. Contractor shall provide any other Electrical Systems that may be required to support DAS, including but not limited to AC power circuits, low voltage DC or digital power to serve remote units and/or head-end equipment.

D. Plumbing Systems

1. Contractor shall provide all necessary pre-action and/or dry agent chemical (such as FM200) Fire Suppression at DAS equipment locations as determined by Owner, AHJ, Emergency Responders, and Cellular Carriers.
2. Contractor shall provide any other Plumbing Systems that may be required to support DAS.

E. Technology Systems

1. Contractor shall provide all necessary raceways for DAS including backbone, antenna, and power cabling.
2. Contractor shall provide all necessary Structured Cabling Systems for DAS including optical fiber backbone, hybrid fiber/power distribution, and antenna cables.
3. Contractor shall provide any other Technology Systems that may be required to support DAS.

2.4 ALTERNATES

A. Contractor Proposed Alternatives

1. The Contractor may propose alternatives for Owner consideration.
2. All alternatives shall include pricing, description, equipment cut-sheets and any other technical documentation necessary.

PART 3 - EXECUTION

3.1 EXAMINATION

The following examination tasks shall be performed by Contractor:

A. Examine pathway elements intended for cable. Check raceways, cables trays, and other elements for compliance with space allocations, installation tolerances, hazards to cable installation, and other conditions affecting installation.

B. Examine walls, floors, roofs, equipment bases, and roof supports for suitable conditions where equipment is to be installed.

C. Provide detailed site survey to determine best cable routing and location of antennas.

3.2 SYSTEM DESIGN CRITERIA

A. General:

1. The DAS, ERRS, and FRS shall distribute and support the following, respectively:

    a. All current technologies available to existing cellular wireless providers authorized to provide service in the United States in all frequency bands.
    b. All current emergency responders' two-way radio communications including First Responders, Police, Fire, Ambulance, and other emergency systems utilized by Public Authorities and Agencies.
    c. All building operations two-way radio systems and other in-house two-way radio communication systems.

2. The system must enable service providers to distribute signal uniformly to all locations within the venue in a manner that mitigates interference to their outside network.
3. The coverage inside the building (in all designated areas) shall provide dominant signal to overcome other signals from other zones or sectors within the building and from outside the building by at least 10dB.
4. The system capacity shall be designed to meet the following minimum upload and download requirements per connected user, based on a 50% "take rate" (i.e. one active / concurrently connected device per seat for 50% of the venue seating capacity.)

    a. Upload = 5 MB/s
    b. Download = 5 MB/s

B. Coverage and Capacity:

1. The DAS shall meet all coverage and capacity requirements for this facility type based on highest occupancy and facility use.
2. The system shall be designed with the appropriate sector/zone capacity and antenna points to ensure acceptable performance. Exact requirements shall be coordinated by the Contractor with Owner and all Service Providers including but not limited to Cellular Carriers, Emergency Responders, and Facility Radio Systems.
3. Interference with other wireless systems: Considerations shall be provided for minimizing interference from other susceptible systems including but not limited to the items noted below. Coordinate with Owner's RF Strategy and Frequency Assignment plans.

    a. Assisted Listening Devices
    b. Bluetooth Devices
    c. FM Radio Transmitter
    d. Media (Radio / TV) Broadcast and/or Intercoms
    e. Specialty Event Wireless
    f. Wireless Broadcast
    g. Wireless Microphones
    h. Wireless Telephone Headsets

3.3 INSTALLATION

A. General:

1. This Section describes the installation locations for the products and materials, as well as methods associated with the DAS and wireless installation portions of the Project. These Specifications, along with the drawings shall be followed during the course of the installation.
2. The Contractor shall examine areas and conditions under which DAS infrastructure is to be installed. Notify Owner, Architect, and Engineer in writing of conditions detrimental to proper completion of the work. Do not proceed with work until unsatisfactory conditions have been corrected in a manner acceptable to the installer.
3. The Contractor shall be knowledgeable of work to be performed by other trades and take necessary steps to integrate and coordinate their work with other trades.
4. The Contractor shall verify space requirements and locations before starting cable installations and terminations. Inappropriate conditions shall be immediately reported to Construction Manager, Owner, Architect, and Engineer prior to initiating installation.
5. All DAS and communications infrastructure shall be installed in an aesthetically pleasing fashion. All surface raceway in new buildings must be approved by the Owner, Architect, and/or Engineer.
6. All communications infrastructure shall be installed for optimal performance.
7. All DAS and communications infrastructure shall be installed to allow for easy additions, moves, and other changes in the future.
8. Final labeling scheme for all DAS and communications components shall be coordinated with the Owner and Engineer during the shop drawings process, prior to initiating work. Labeling scheme shall include but not be limited to communications rooms, cabinets, racks, cable terminal blocks and patch panels, antennas, outlets, cables, etc.
9. Construction within Telecom Rooms must be substantially complete before the installation of the DAS and communications cabling. This includes, but is not limited to, the installation of plywood backboard, cable tray or ladder rack, electrical outlets, light fixtures, sprinklers and ductwork. All walls shall also be painted before the installation.
10. The Contractor is required to coordinate their efforts with the other trades and sub-contractor who may be working within the same vicinity to avoid conflict and lost time.
11. The Contractor shall supply all necessary tools, equipment, accessories, safety equipment, protective clothing, etc., as customary for the craft and necessary for the installation.
12. The contractor shall not install any component in a manner or condition that will void manufacturer and/or contractor warranty. Any such conditions that prevent an acceptable install shall be immediately reported to Construction Manager or General Contractor, Owner, Architect, and Engineer prior to initiating installation. All mis-installed components will be removed and replaced with new, appropriate components at the Contractor’s expense. No additional cost will be submitted to Owner.
13. All equipment shall be installed in a neat and workmanlike manner, arranged for convenient operation, testing and future maintenance.

B. Raceway Installation:

1. Contractor shall comply with all industry codes and standards for DAS raceway installation, including but not limited to, appropriate conduit size, fill ratio, bend radii, number of bends and/or distance between pull-boxes, etc.
2. Fire seal all raceway penetration and openings to maintain fire rating after communications cables are installed.
3. Provide labels on all communications pull-boxes and junction-boxes.

4. Identify conduits at cable tray end by architectural room number.

C. Cable Installation: The following procedures shall apply to cable installation:

1. All distribution cable, backbone cable, horizontal cable, radiating cable, and antenna cable must be plenum rated.
2. All DAS and communications cables routed within Telecom Rooms shall be bundled and combed to provide a neat and organized appearance, per industry standards.
3. Install cables concealed in accessible ceilings. Install cables according to manufacturer's recommended installation practices using approved hangers at a maximum spacing of every 48-inches (1.2m).
4. Cable bends shall not be less than that recommended by the manufacturer of the cable. Do not exceed manufacturer's minimum bending radii and other cable requirements.
5. The contractor shall not install any cable in conduits that does not have the appropriate protect bushings on conduit ends.
6. Do not install bruised, kinked, scored, deformed, or abraded cable. Remove and discard cable if damaged during installation and replace it with new cable.
7. Any exposed cables shall be installed parallel to building lines. Follow surface contours and support the cable according to manufacturer's written instructions. Do not run adjacent and parallel to power or data cables. All exposed cable routing shall be coordinated with the Architect prior to installation.
8. Care shall be taken so as not to damage cable during the installation process and that the manufacturer's and industry standard's pull tension specification is not exceeded.

D. Antenna Installation: The following procedures shall apply to antenna installation:

1. All antennas and associated locations shall be discreet. Antennas shall be concealed wherever possible using stealth technology to ensure installation maintains high architectural form critical to the high-end finish of this project.
2. All antenna locations shall be coordinated with Architect prior to initiating any work.
3. Install antennas per manufacturer's requirements.
4. Contractor shall install antennas with all necessary supports to ensure safe installation and support to prevent falling.
5. Antennas shall be rated accordingly and as applicable for the installation type, location, condition, and application supported.

E. Equipment Installation: The following procedures shall apply to equipment installation:

1. Install surge suppressors where ac-power-operated devices are not protected against voltage transients by integral surge suppressors specified in UL1449. Install surge suppressors at the devices' power-line terminals. Comply with Division 26 Section "Transient Voltage Suppression."
2. Mount electronic equipment in the types of cabinets recommended by manufacturer. Group related items in methodical sequence.
3. Arrange equipment to facilitate access for maintenance and to preserve headroom and passage space.
4. Interface DAS equipment with all base station equipment as required during installation period of DAS.
5. Label all equipment and interfaces.

F. System Management and Monitoring Software Installation: The following procedures shall apply to system management and monitoring software installation:

1. Coordinate computer and data network requirements with Owner's IT Group. This should include MAC and IP addressing, VLAN assignment, bandwidth requirements, class of service (CoS), VPN requirements, etc.
2. The system management and monitoring software shall be fully set up, programmed, and configured.

3.4 COORDINATION

A. Cellular Carrier Coordination: Selected Bidders as determined by Owner shall participate in meetings prior to finalization and award to review qualifications, cost and overall approach. This meeting will be set up by Construction Manager and Owner with selected Bidders.

B. Design Coordination: All components proposed by the Contractor shall be coordinated with the Owner, Architect, and ME Engineers. Provided below is a general list of major items that shall be documented in a table and coordinated. The list provided below is to be used as an example and is not intended to be all inclusive or to limit items required to be reviewed and coordinated.

1. Equipment Type and Physical Size.
2. Rack Units required per location.
3. Electrical Power (voltage, amp, loads, and receptacle types)
4. HVAC (heat dissipation and equipment operating temperature range)
5. Antenna Types and Locations
6. Backbone Distribution (fiber strand allocation)

C. RF and Wireless Coordination:

1. The Contractor shall perform an onsite RF and wireless study prior to finalizing design. This information shall be submitted in hard copy documents.
2. The Contractor shall obtain a copy of the Owner's current RF strategy and frequency assignment. This information shall be reviewed in detail to identify any interfering and/or potentially interfering sources.
3. The Contractor shall review and coordinate the onsite study, Owner's current RF strategy and frequency assignment, and proposed DAS design. The Contractor shall make recommendations to the Owner and adjust the proposed design accordingly to ensure no interfering sources or overlap of frequency assignment.
4. The Contractor shall perform an on-site RF and wireless study after completing system installation. This information shall be submitted in hard copy documents. The results of this test shall be reviewed by the Contractor and Manufacturer to confirm system compliance with coverage, capacity, and performance requirements.

D. Installation Coordination: The Contractor shall field coordinate all work with Construction Manager and other Sub-Contractors and Trades as necessary to minimize conflicts.

E. Schedule: The Contractor shall coordinate the project schedule with the Construction Manager including but not limited to the following:

1. RFP Response
2. RF Design Submittals
3. Construction and Phasing
4. Installation

5. Substantial Completion
6. Final Completion
7. System Acceptance

3.5 IDENTIFICATION

A. The following procedures shall apply to system labeling:

B. General Label Requirements:

1. The labeling scheme shall be provided by the Contractor and coordinated with the Owner and Architect prior to initiating any work. A sample scheme shall be submitted for approval.
2. Label all equipment, components, cables, terminations, enclosures, etc.

3.6 FIELD QUALITY CONTROL

A. Testing, Commission, and Optimization: Contractor shall test, commission and optimize each system upon completion per Cellular Carrier and/or Manufacturer recommendations.

B. Qualitative and Quantitative Performance Tests: Contractor shall verify for each major frequency band utilized that signal coverage area, signal coverage levels, and signal coverage consistency are compliant with Specifications. Testing shall be conducted using calibrated “walk-test” receivers.

C. Test Results: Contractor shall record test results and publish them in electronic and hard copies for distribution to Owner if requested.

3.7 CLEANING

A. Contractor shall clean installed items using methods and materials recommended by manufacturer.

B. Contractor shall clean system components, including antennas and supports, electronic equipment, and distribution components.

3.8 DEMONSTRATION AND TRAINING

A. The following procedures shall apply to demonstration and training:

B. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain equipment for any system (DAS, ERRS, or FRS) that is to be turned over to the Owner to operate and maintain.

1. Train Owner's maintenance personnel on procedures and schedules for system administration, routine use, troubleshooting, servicing, and maintaining equipment.
2. Demonstrate methods of determining optimum alignment and adjustment of components and settings for system controls.
3. Review data in maintenance manuals. Refer to Division 1 Section "Operation and Maintenance Data" or Division 26 Section “General Electrical Requirements.”

4. Schedule training with Owner with at least seven days advance notice.

3.9 RECORD DOCUMENTATION

A. Record documentation shall be submitted to the Owner by the Contractor at the completion of the DAS installation. The contractor shall submit all information necessary to operate and maintain the system including but not limited to the following:

1. As-Built Documents
2. Operations and Maintenance Manuals
3. Maintenance Schedule
4. Maintenance Company Contact Information
5. Troubleshooting Guide
6. Product Data and Manufacturer Cut-Sheets
7. Warranty Information and Contact
8. Manufacturer's Product and Installation Certificate
9. Log (troubleshooting, replacement, expansion, and replacements)
10. Labeling Scheme
11. Spare Parts Lists

B. Contractor shall maintain current record documents at the construction site.

END OF SECTION

APPENDIX A - ADDITIONAL BIDDER QUESTIONS

The following Appendix shall be filled out by each bidder. This information will become contractually part of the prevailing Bidder's agreement.

1. Are you the manufacturer of your proposed solution? If not, who is the manufacturer? Please provide data sheets for all components used in the proposed solution.
2. Detail bands covered by your current offering.
3. Can each service (Cellular, Emergency Responder, Facility Radios) be extended independently or are all services extended together?
4. Provide an overview of the monitoring and maintenance capabilities of the proposed system.
5. Detail the procedure to troubleshoot the following problems:
    a. Disconnected antenna.
    b. Failed remote distribution unit.
    c. Cable break or cut (detail both fiber and coax).
    d. Cable installed is 125% longer than design spec.
6. Provide an overview of the process used in the creation of your proposed design.
7. Detail maintenance and post sale support services, including duration, that are included in the price of the proposed system.
8. Detail maintenance and support services, including duration, that are available for additional cost, including extended warranty options.
9. Define requirements of standard warranty (and any extended warranty) being provided.
10. What extended warranty period is offered beyond standard warranty for the entire, installed system?
11. Do you have regional field service offices? If so, where are they located?
12. What field technical support response time is guaranteed?
13. All services on the proposed system have a guaranteed performance level. Please confirm the performance metrics of your proposed solution and your guarantee to deliver these performance levels as measured by field tests of the installed system or bring the installed system into compliance without cost to Owner.
14. What warranty period is offered for the entire installed system? For the active components? What response time is guaranteed?
15. Define the RF power per RF carrier, band and protocol.
16. Explain how RF output power is measured and where in the system the measurement is taken (i.e. at antenna point, at remote, etc.)
17. When providing system performance metrics, are these measured at the output of the remote unit? Do performance metrics factor in any cable loss?
18. List the system noise figure and how it is defined.
19. Describe cable distances and loss and how it affects your system, or attach a chart w/cable specs and max distances.
20. Please list the waveform accuracy specification for all supported protocols and provide performance test documentation.
21. How does/will your solution support 3G/4G services (HSPA/HSPA+, WiMAX, LTE)?
22. Does your solution support MIMO? If so, please describe how this is achieved in detail.
23. Does your solution support 64QAM data? Please provide test results.
24. Does your system support various power options—AC or DC?
25. Can the solution use UPS systems? If so, how are they alarmed? Describe the various options (duration of support, amount of equipment).
26. Does your solution support SNMP? If so, how is it supported (external box or integrated) and what are the connectivity options (LAN, wireless modem, POTS line)?
27. Do you offer a NOC/NMS capability for centralized monitoring/maintenance? If so, how many systems can be simultaneously monitored and managed?
28. If your system supports multiple frequency bands, can each band be managed independently? Can a frequency band be shut down on a system wide basis? Can a frequency band be shut down at a specific passive antenna point?
29. Can attenuation be applied via software to a single antenna point?

30. Can your solution support capacity and coverage changes post installation? If so, how is this managed?
31. Describe the system architecture flexibility of your solution(s).
32. Can your solution use the existing cable infrastructure in or between buildings? Please describe.
33. What is your MTBF for all products you're responding with?
34. Describe the physical space requirements for main equipment locations based on the system configuration proposed in this RFP.
35. List the potential RF interfaces your system can support (base station, BDA/repeater, CPRI/OBSAI base station interface, etc.).

APPENDIX-B - BIDDER'S DAS DESIGN ASSUMPTIONS

The following Appendix shall be filled out by each bidder. This information will become contractually part of the prevailing Bidders agreement.

1. Define number of sectors per frequency per service provider.
2. Define Design Goal. (example: -85 dBm for 99% of defined coverage area at 90% of time)
3. Define Coverage.
4. Define System Feed. (Will the system be fed remotely (off-air) or from a base station(s) on or off-site)?
5. State the assumed fade margin for the RF coverage prediction and what that accounts for.
6. State what the RF coverage prediction and system designs are based on.
7. State physical mounting locations for main equipment and if all necessary mounting gear is included in the proposal. This should include physical space and environmental requirements.
8. State AC Power and Grounding requirements in proposed equipment rooms.
9. State what types of antennas are permitted and confirm antenna location height from floor.
10. State whether existing cable pathways can be used. Confirm whether installation of additional cable racks or raceways is required.
11. State whether installation of new conduit is required.
12. State whether cable lengths are estimates or not-to-exceed amounts.
13. State whether existing cable infrastructure can be used. If so, state type and existing locations.
14. State whether penetration of fire-rated walls require approved fire-stopping methods.
15. State whether dust tents/partitions, water misting of surfaces, etc., will be required.
16. Confirm if quoted cabling is plenum rated; if required.
17. Confirm if Union labor is quoted.
18. Confirm if special high-lift equipment is quoted.
19. Describe close-out commissioning documentation package.
20. State whether spare products are quoted per Manufacturer's recommended quantities.

SECTION 28 05 00.10 – COMMON WORK RESULTS FOR ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 Description of Work

A. Provide the electronic security system (ESS) in accordance with the drawings, specifications, and referenced publications.

B. Perform all work, products, systems integration, engineering, and design work required for the project in order to ensure complete and fully operational systems and proper installation of equipment. Provide calculations and analysis to support design and engineering decisions as specified in submittals. Provide and pay all labor, materials, and equipment, sales and gross receipts and other taxes. Secure and pay for plan check fees, permits, other fees, and licenses necessary for the execution of work as applicable for the project. Give required notices; comply with codes, ordinances, regulations, and other legal requirements of public authorities, which bear on the performance of work.

C. Provide an ESS, installed, programmed, configured, documented, and tested. The security system includes but is not limited to: access control, intrusion detection, duress alarms, elevator control interface, video surveillance and assessment, video recording and storage, delayed egress, intercommunication system, fire alarm interface, equipment cabinetry, and uninterruptible power supplies (UPS) interface.

D. The work includes the procurement and installation of electrical wire and cables, the installation and testing of all system components. Inspection, testing, demonstration, and acceptance of equipment, software, materials, installation, documentation, and workmanship, shall be as specified herein. Provide all associated installation support, including the provision of primary electrical input power circuits.

E. Provide repair service replacement parts and on-site service during the warranty period. Guarantee all parts and labor for a term of one (1) year, unless dictated otherwise in this specification from the acceptance date of the system as described in specification 280800.10. The Contractor is responsible for all equipment, software, firmware, licensing, shipping, transportation charges, and expenses associated with the service of the system for one (1) year.

F. Operator training is not required.

1.2 Summary

A. This specification provides general requirements for the overall electronic security system (ESS) applicable to all projects.

1.3 Related Documents

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. This Specification is the base document for electronic security systems. Use the following specification sections in conjunction to provide a complete and fully integrated security management system.

1. 27 05 26.10 – Grounding and Bonding for Security Systems
2. 27 05 28.10 – Pathways for Security Systems
3. 27 05 36.10 – Cable Trays for Security Systems
4. 27 05 44.10 – Sleeves and Sleeve Seals for Security Pathways and Cabling
5. 27 11 16.10 – Security Cabinets, Racks, Frames, and Enclosures
6. 27 13 00.10 – Security Backbone Cabling
7. 27 15 00.10 – Security Horizontal Cabling
8. 28 05 00.10 – Common Work Results for Electronic Security
9. 28 05 07.10 – Power Sources for Electronic Security
10. 28 05 09.10– Surge Protection for Electronic Security
11. 28 05 13.10 – Servers, Workstations, and Storage for Electronic Security
12. 28 05 31.10 – Communications Equipment for Electronic Security
13. 28 08 00.10 – Commissioning of Electronic Security
14. 28 10 00 – Access Control
15. 28 15 15 – Electrified Locking Devices & Accessories
16. 28 15 23 – Intercom Entry Systems
17. 28 15 25 – Electronic Key Management Systems
18. 28 15 27 – Access Control Electronic Turnstiles & Mobility Systems
19. 28 18 00 – Security Access Detection Equipment
20. 28 19 15 – Perimeter Vehicle Access Management Systems
21. 28 20 00 – Video
22. 28 31 00 – Intrusion Detection
23. 28 49 17 – Electronic Personal Safety Emergency Aid Devices
24. 28 51 19 – Control Room and Monitoring Equipment
25. 32 31 11 – Gate Operators

C. Requirements of Specification 280800.10 take precedence over Division 01 System Acceptance requirements.

D. Related Sections include the following:

1. Division 01

2. Division 08

    a. Coordinate Division 8 and 28 requirements.

3. Division 12

    a. Coordinate case mounted security sensors and equipment.

4. Division 14

    a. Elevator Contractor shall coordinate and install equipment in the elevator. The equipment includes the intercoms, cameras, and card readers.
    b. Terminate signal lines in the elevator machine room for use by the Security Contractor.
    c. Security Contractor shall coordinate cabling. Use High Flex cables for elevator installations listed for intended purpose.

d. The Security Contractor shall provide terminal strips and wire from the security panel, labeling each point and its respective function (input output) for the Elevator Contractor shall provide final termination from elevator panel.
e. Provide a transition box for all security related equipment.

5. Division 23

a. Coordinate installation of the Light Control Equipment, Radio, and Elevator Status Equipment installed in the Security Monitoring Console. Provide dedicated Liebert Cooling Systems (or approved equivalent) and controls, for each Security Monitoring Control and Equipment room.

6. Division 26

a. Provide dedicated Emergency Electrical Power (120 VAC) circuits as required to provide full system functionality.

1.5 Definitions

A. ARA: Area of Rescue Assistance

B. Basket Cable Tray: A fabricated structure consisting of wire mesh bottom and side rails.

C. BICSI: Building Industry Consulting Service International

D. Controller: An intelligent peripheral control unit that uses a computer for controlling its operation. Where this term is presented with an initial capital letter, this definition applies.

E. CPU: Central processing unit.

F. Credential: Data assigned to an entity and used to identify that entity.

G. DGP: Data Gathering Panel

H. EMI: Electromagnetic interference.

I. EMT: Electric Metallic Tubing

J. ESS: Electronic Security System

K. GFI: Ground fault interrupter.

L. Identifier: A credential card, keypad personal identification number or code, biometric characteristic, or other unique identification entered as data into the entry-control database for the purpose of identifying an individual. Where this term is presented with an initial capital letter, this definition applies.

M. I/O: Input/Output.

N. INC: Intelligent Network Controller

O. Intrusion Zone (IZ): A space or area for which an intrusion must be detected and uniquely identified, the sensor or group of sensors assigned to perform the detection, and any interface equipment between sensors and communication link to central-station control unit.

P. LAN: Local area network.

Q. LCD: Liquid-crystal display.

R. LED: Light-emitting diode.

S. LOD: Level of Detail

T. LOE: Level of Effort

U. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control and signaling power-limited circuits.

V. M-JPEG: Motion – Joint Photographic Experts Group.

W. MPEG: Moving picture experts group.

X. NEC: National Electric Code

Y. NECA: National Electrical Contractors Association

Z. NEMA: National Electrical Manufacturers Association

AA. NFPA: National Fire Protection Association

BB. NRTL: Nationally Recognized Testing Laboratory.

CC. Open Cabling: Passing telecommunications cabling through open space (e.g., between the studs of a wall cavity).

DD. OPS: Office of Protection Services

EE. OTDR: Optical Time Domain Reflectometer

FF. PACS: Physical Access Control System

GG. PIR: Passive infrared

HH. PIR Rex: Passive Infrared Request to Exit

II. PPSD: Personnel and Physical Security Division (A department within Owner Organization)

JJ. RCDD: Registered Communications Distribution Designer.

KK. RF: Radio frequency.

LL. RFI: Radio-frequency interference.

MM. RIGID: Rigid conduit is galvanized steel tubing, with a tubing wall that is thick enough to allow it to be threaded.

NN. RS-232: An TIA/EIA standard for asynchronous serial data communications between terminal devices. This standard defines a 25-pin connector and certain signal characteristics for interfacing computer equipment.

OO. RS-485: An TIA/EIA standard for multipoint communications.

PP. SMS: Security Management System – A SMS is a software that incorporates multiple security subsystems (e.g., access control, intrusion detection, closed circuit television, intercom) into a single platform and graphical user interface.

QQ. Standard Intruder: A person who weighs 100 lb. (45 kg) or more and whose height is 1525 mm (60 in) or more; dressed in standard clothing.

RR. Standard-Intruder Movement: Any movement, such as walking, running, crawling, rolling, or jumping, of a "standard intruder" in a protected zone.

SS. TCP/IP: Transport control protocol/Internet protocol incorporated into Microsoft Windows.

TT. TDMM: Telecommunications Distribution Methods Manual

UU. TIA: Telecommunications Industry Association

VV. UPS: Uninterruptible Power Supply

WW. UTP: Unshielded Twisted Pair

XX. VASS: Video Assessment and Surveillance System

YY. VPN: Virtual Private Network

ZZ. WAN: Wide Area Network.

AAA. WAV: The digital audio format used in Microsoft Windows.

BBB. Windows: Operating system by Microsoft Corporation.

CCC. Workstation: A PC with software that is configured for specific limited security system functions.

DDD. WYSIWYG: (What You See Is What You Get.) Text and graphics appear on the screen the same as they will print.

1.6 General Arrangement of Contract Documents

A. The Contract Documents supplement to this specification indicates approximate locations of equipment. The installation and/or locations of the equipment and devices shall be governed by the intent of the design; specification and Contract Documents, with due regard to actual site conditions, recommendations, ambient factors affecting the equipment and operations in the vicinity. The Contract Documents are diagrammatic and do not reveal all offsets, bends, elbows, components, materials, and other specific elements that may be required for proper installation. If any departure from the contract documents is deemed necessary, or in the event of conflicts, the submit details of such departures or conflicts in writing to the owner or owner's representative for his or her comment and/or approval before initiating work.

B. Anything called for by one of the Contract Documents and not called for by the others shall be of like effect as if required or called by all, except if a provision clearly designed to negate or alter a provision contained in one or more of the other Contract Documents shall have the intended effect. In the event of conflicts among the Contract Documents, the Contract Documents shall take precedence in the following order: the Form of Agreement; the Supplemental General Conditions; the Special Conditions; the Specifications with attachments; and the drawings.

1.7 Submittals

A. General

1. Comply with the Contract Documents and in accordance with this section. Submittals lacking the breath or depth of these requirements will be considered incomplete and rejected. Submissions are considered multidisciplinary and require coordination with applicable divisions to provide a complete and comprehensive submission package. Additional general provisions are as follows:
   a. Schedule submittals to maintain the project schedule. For coordination drawings refer to Division 1 Specification, which outline basic submittal requirements and coordination.
   b. Identify variations from requirements of Contract Documents and state product and system limitations, which may be detrimental to successful performance of the completed work or system.
   c. Submit each package at one (1) time for each review and include components from applicable disciplines (e.g., electrical work, architectural finishes, door hardware, etc.) which are required to produce an accurate and detailed depiction of the project.
   d. Manufacturer's information used for submittal shall have pages with items for approval tagged, items on pages shall be identified, and capacities and

performance parameters for review shall be clearly marked through use of an arrow or highlighting. Provide space for COTR and Contractor review stamps.

e. Technical Data Drawings shall be in the project specific version of AutoCAD® or REVIT, drawn accurately, and in accordance with Smithsonian Institution CAD and REVIT Standards. FREEHAND SKETCHES OR COPIED VERSIONS OF THE CONSTRUCTION DOCUMENTS WILL NOT BE ACCEPTED. If departures from the technical data drawings are subsequently deemed necessary by the Contractor, submit details of such departures and the reasons thereof in writing to the COTR and the PPSD Security Engineer for approval before initiating work.

f. Submittal Format
   1) Provide one (1) hard-copy of drawings. Make all other submittals as PDF with bookmarks for sections.

B. Pre-Installation Submittal

1. Qualifications

a. Provide Company certifications

1) Genetec
   a) Certified Integrator
   b) Axis
   c) 2N

b. Include qualifications and manufacturer's certifications for individuals working on the project including but not limited to:

1) Genetec (Access Control, Video Management Systems)
2) 2N (Intercom & Public Address)
3) Axis (Cameras)
4) Cisco
   a) CCNA

5) BICSI
   a) RCDD

c. Provide project references as outlined in Paragraph 1.11 A "Contractor Qualifications".

2. Product Data

a. Provide a chart of product data listing the specification section and paragraph number of each product. Annotate if "Provided as Specified" or "Substitution Requested".

b. Product data sheets organized and bookmarked by Specification Division. Annotate deviations from the design documents and the justification for the change.

c. Where the words, "or approved equivalent" or like words are used, either furnish the equipment as specified or submit a request for substitution in writing with the make, model, and justification to the COTR and the PPSD Security Engineer for approval.

d. If the contractor recommends equipment substitution, the contractor is responsible for complete documentation of the reason for the change including price differential

and is financially liable for the design time expended by the security consultant to research the substitution.

3. Shop Drawings

a. Build upon the design documents to reflect current conditions and approved product data. Annotate deviations from the design documents and the justification for the change.
b. Include wiring diagrams to include but not limited to power supplies, card readers, fire alarm connections, elevator interface, and tamper circuits.
c. Security door schedule coordinated with Division 8 requirements. Include the following information:

1) Configuration Number
2) Door Number (Derived from Architectural Drawings)
3) Floor Plan Sheet Number
4) Standard Detail Number
5) Door Description (Derived from Loading Sheets)
6) Security Point Number (Derived from Loading Sheets)
7) Door Position or Monitoring Device Type, Make & Model Number
8) Lock Type, Model Number & Power Input/Draw (standby/active)
9) Card Reader Type, Make & Model Number
10) Shunting Device Type, Make & Model Number
11) Sounder Type, Make & Model Number
12) Camera Make & Model Number
13) Misc. devices as required
    a) Delayed Egress Type, Make & Model Number
    b) Intercom Make & Model Number
    c) Electric Transfer Hinge
    d) Electric Pass-through device

14) Remarks column indicating special notes or door configurations

C. Pre-Programming Submittal

1. IP Addressing Scheme
    a. Provide Owner Security Lead with the quantity of devices requiring IP addresses. Owner Security Lead will then provide the IP addressing scheme.
2. Loading Sheets
    a. Provide loading sheets for each DGP, including input and output boards for all field panels associated with the project.
    b. OPS-PPSD will provide blank electronic sheets for contractor use.
    c. Provide a spreadsheet for each DGP. Name the spreadsheet with the DGP number (e.g. “Site Name DGP-01.xls”)

D. Pre-Acceptance Testing

1. OPS-PPSD will provide blank testing forms for contractor to reproduce and fill out during testing.
2. Contractor Field Test
    a. Contractor performs the Contractor Field Test (CFT) of all devices utilizing Owner Security Lead provided forms and submits test results to Owner.
3. Performance Verification Test

a. Based on the Owner approval of the Contractor's Field Test, the COTR will schedule the PVT with the Contractor and Owner.
b. Owner will witness the Contractor conduct the PVT of all devices utilizing the same form as for the CFT.

E. Closeout Submittals

1. Project Redlines
   a. Neatly maintain an up-to-date set of construction redlines detailing current location and configuration of the project components.
   b. Mark the redline documents with the words 'Master Redlines' on the cover sheet and be maintained by the Contractor in the project office.
   c. Field drawings shall be used for data gathering & field changes. These changes shall be made to the master redline documents daily. Field drawings shall not be considered "master redlines".
   d. Provide access to redline documents anytime during the project for review and inspection by the COTR or authorized Owner Security Lead representative.
   e. Any project component or assembly that is not installed in strict accordance with the drawings shall be noted on the drawings.
   f. Submit the Master Redline document to the COTR and Owner Security Engineer for review and approval of all changes or modifications to the documents prior to producing Record Construction Documents. The COTR shall be given a minimum of a thirty (30) day review period to determine the adequacy of the Master Redlines. If the master redlines are found suitable by the COTR and the PPSD Security Engineer, the COTR will initial and date each sheet and turn the redlines over to the Contractor for Record As-Built development.
2. Record Construction Documents (Record As-Built)
   a. The submitted as built documents shall be in editable electronic formats and the ownership of the drawings shall be fully relinquished to the owner.

1.8 Project Process Diagram

A. The ESS Project Process Diagram (below) is provided to identify key consecutive or concurrent tasks and milestones required to ensure the project is completed prior to owner occupancy. Substantial completion means all systems have been fully tested and accepted in writing by OPS. Minor or non-life safety related punch list items may continue through owner occupancy, but shall be resolved within two (2) weeks of official date of occupancy.

B. The contractor is encouraged to utilize the diagram for the development of project schedules, and coordinating submissions.

1.9 Coordination

A. Coordinate arrangement, mounting, and support of electronic security equipment:

B. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.

C. To provide for ease of disconnecting the equipment with minimum interference to other installations.

D. To allow right of way for piping and conduit installed at required heights.

E. Ensure raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.

F. Coordinate the installation of required supporting discipline devices placement and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

G. Coordinate the locations of access panels and doors for electronic security items that are behind finished surfaces or otherwise concealed. Access doors and panels are specified in Division 08 Section "Access Doors and Frames."

H. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping."."

1.10 Quality Assurance

A. Contractor Qualifications

1. The Contractor or security sub-contractor shall be a licensed security Contractor with a minimum of five (5) years' experience installing and servicing systems of similar scope and complexity. The Contractor shall be an authorized regional representative of the electronic security systems included in the project scope.
2. Provide four (4) current references from clients with systems of similar scope and complexity which became operational in the past three (3) years. At least three (3) of the references shall be utilizing the same system components, in a similar configuration as the proposed system. The references must include a current point of contact, company or agency name, address, telephone number, complete system description, date of completion, and approximate cost of the project.
3. The owner reserves the option to visit the reference sites, with the site owner's permission and representative, to verify the quality of installation and the references' level of satisfaction with the system.
4. Provide copies of system manufacturer certification for all technicians. Only utilize factory-trained technicians to install, program, and service the electronic security systems. The Lead Technician shall have a minimum of five (5) continuous years of technical experience in electronic security systems.
5. The Contractor shall have a local service facility located within 60 miles of the project site. The local facility shall include sufficient spare parts inventory to support the service requirements associated with this contract. The COTR and the Owner Security Engineer reserves the option of visiting the company's facility to verify the service inventory and presence of a local service organization.

6. Refer to Division 27 Specifications for additional requirements for cabling.

B. Electrical Components, Devices, and Accessories

1. Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Material & Workmanship

1. Unless otherwise specifically provided under this contract, all equipment, material and articles to be incorporated in the work shall be new and of the most suitable grade for the purposes intended.
2. References to any equipment, material, article or patented process, by trade name, make or catalog number shall be regarded as establishing a standard of performance and quality, and shall not be construed as limiting competition.
3. When so directed, the Contractor shall submit samples for approval at the Contractor's expense. Equipment, materials, and articles installed or used without the required approval shall be at the Contractors risk of rejection.
4. Warranties of all work and installed products shall be according to the Contract General Provisions.

1.11 Maintenance & Service

A. General Requirements

1. Provide services required and equipment necessary to maintain the electronic security system in an operational state as specified for a period of one (1) year after formal written acceptance of the system.
2. Provide necessary material required for performing scheduled adjustments or other non-scheduled work. Minimize impacts on facility operations when performing scheduled adjustments or other non-scheduled work. See also General Project Requirements.

B. Description of Work

1. The adjustment and repair of the security system includes the following items computers equipment, communications transmission equipment and data transmission media (DTM), local processors, security system sensors, access control equipment, facility interface, signal transmission equipment, intercoms, and video equipment.

C. Personnel:

1. Service personnel shall be certified in the maintenance and repair of the selected type of equipment and qualified to accomplish all work promptly and satisfactorily. Advise the COTR and the Owner Security Engineer in writing of the name of the designated service representative, and of any change in personnel. Provide the COTR and the Owner Security Engineer with copies of system manufacturer certification for the designated service representative.

D. Emergency Service

1. The owner shall initiate service calls whenever the system is not functioning properly. Provide the owner with an emergency service center telephone number. Staff the emergency service center 24 hours a day 365 days a year.
2. The Smithsonian Institution has sole authority for determining catastrophic and non-catastrophic system failures.
3. Catastrophic system failures are defined as any system failure that the Owner determines will place the facility(s) at increased risk. For catastrophic system failures, provide same day four (4) hour service response with a defect correction time not to exceed eight (8) hours from notification.
4. For non-catastrophic failures, provide eight (8) hour service response with a defect correction time not to exceed 24 hours from notification.

E. Work Request

1. Separately record each service call request, as received. The record shall include the serial number identifying the component involved, its location, date and time the call was received, specific nature of trouble, names of service personnel assigned to the task, instructions describing the action taken, the amount and nature of the materials used, and the date and time of commencement and completion. Deliver a record of the work performed within five (5) working days after the work was completed.

F. System Modifications

1. Make any recommendations for system modification in writing to the COTR and the Owner Security Engineer. No system modifications, including operating parameters and control settings, shall be made without prior written approval from the COTR and the Owner Security Engineer.

1.12 Project Environmental Conditions

A. Control Station

1. Rated for continuous operation in ambient conditions of 60 to 85 deg F (16 to 30 deg C) and a relative humidity of 20 to 80 percent, non-condensing.

B. Interior, Controlled Environment

1. System components, except central-station control unit, installed in temperature-controlled interior environments shall be rated for continuous operation in ambient conditions of 36 to 122 deg F (2 to 50 deg C) dry bulb and 20 to 90 percent relative humidity, non-condensing. NEMA 250, Type 1 enclosure.

C. Interior, Uncontrolled Environment

1. System components installed in non-temperature-controlled interior environments shall be rated for continuous operation in ambient conditions of 0 to 122 deg F (-18 to 50 deg C) dry bulb and 20 to 90 percent relative humidity, non-condensing. NEMA 250, Type 4x enclosures.

D. Exterior Environment

1. System components installed in locations exposed to weather shall be rated for continuous operation in ambient conditions of -30 to 122 deg F (-34 to 50 deg C) dry bulb and 20 to 90 percent relative humidity, condensing. Rate for continuous operation where exposed to rain as specified in NEMA 250, winds up to 137 km/h (85 mph) and snow cover up to 24 in (610 mm) thick. NEMA 250, Type 4X enclosures.

E. Hazardous Environment

1. System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.

F. Corrosive Environment

1. For system components subjected to corrosive fumes, vapors, and wind-driven salt spray in coastal zones, provide NEMA 250, Type 4X enclosures.

G. Security Environment

1. Use vandal resistant enclosures in high-risk areas where equipment may be subject to damage.

1.13 Equipment and Materials

A. General Equipment Requirements

1. Equipment and materials shall be standard, current products of the manufacturer, and be suitable for the systems being installed and the intent of the design.
2. Plastic laminated nameplates shall be installed on all components accessed by - Smithsonian Institution Security Maintenance Personnel. Each nameplate shall identify the component and its location within the security system. The laminated plastic shall be 0.06 in (1.6 mm) thick, black with white lettering center core. Nameplates shall be a minimum of 0.75 in (19 mm) high, with a minimum of 0.13 in (3.3 mm) high-engraved block lettering. Nameplates are to be attached to the component with screws or located as required by security documentation plans and specifications. All console monitors shall be labeled with the monitor number and intended function. Submit planned naming conventions for approval.
3. Any material, device, or equipment damages including dents and marred finishes before or during installation and before acceptance of the completed system, shall be replaced unless repairs can be made that are acceptable to the COTR and the Owner Security Engineer. Any such replacement or repairs, including repairs to the finish, shall be made at no cost to the Owner.
4. Parts of the project site are finished spaces, including paint, trim, wall covering, floor treatments, lighting, and building mechanical systems. Therefore, perform the work specified herein, such that, at the completion of his work, all finished space is restored to the original condition existing prior to the commencement of work. During the course of performing the work specified herein, if the Contractor encounters any damaged finish in any area where the Contractor's work is to be performed, notify the COTR in writing prior to performing work in that area. Proceed with the work in these areas only after receiving written confirmation that the existing conditions have been documented and authorization has been given to proceed.

1.14 Component Enclosures

A. Tamper Provisions and Tamper Switches

1. Enclosures with terminal strips or circuit boards require tamper switches.
2. Arrange tamper switches to initiate an alarm signal that will report to the monitoring station when the door or cover is moved.
3. Tamper switches shall be inaccessible until the switch is activated. Be connected to circuits which are under electrical supervision at all times, irrespective of the protection mode in which the circuit is operating. Be spring-loaded and held in the closed position by the door or cover and be wired so they break the circuit when the door cover is disturbed. Tamper circuits shall be adjustable type screw sets and shall be adjusted by the contractor to eliminate nuisance alarms associated with incorrectly mounted tamper device shall annunciate prior to the enclosure door opening (within 1/4 " tolerance).
4. The single gang junction boxes for the portrait alarming and pull boxes with less than 102 square mm will not require tamper switches.
5. All enclosures over 12 sq in (305 sq mm) shall be hinged with an enclosure lock.
6. Control Enclosures: Maintenance/Safety switches on control enclosures, which must be opened to make routing maintenance adjustments to the system and to service the power supplies, shall be push/pull-set automatic reset type.
7. Provide one (1) enclosure tamper switch for each 24 in (609 mm) of enclosure lock side opening evenly spaced.
8. All security screws shall be Torx-Post Security Screws.

1.15 Warranty

A. The Contractor shall, as a condition precedent to the final payment, execute a written guarantee (warranty) to the COTR certifying all contract requirements have been completed according to the final specifications. Contract drawings and the warranty of all materials and equipment furnished under this contract are to remain in satisfactory operating condition (ordinary wear and tear, abuse and causes beyond his control for this work accepted) for one (1) year from the date the Contactor received written notification of final acceptance from the COTR and the Owner Security Engineer. Repair or replace all defects or damages due to faulty materials or workmanship without delay, to the COTR's satisfaction, and at the Contractor's expense.

B. When equipment and labor covered by the Contractor's warranty, or by a manufacturer's warranty, have been replaced or restored because of its failure during the warranty period, the warranty period for the replaced or repaired equipment or restored work shall be reinstated for a period equal to the original warranty period, and commencing with the date of completion of the replacement or restoration work. In the event any manufacturer customarily provides a warranty period greater than one (1) year, the Contractor's warranty shall be for the same duration for that component.

PART 2 - PRODUCTS

2.1 There are no products in this specification

PART 3 - EXECUTION

3.1 Common Requirements for Electronic Security Installation

A. Comply with NECA 1.

B. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.

C. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.

D. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electronic safety and security equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.

E. Right of Way: Give to piping systems installed at a required slope.

3.2 General

A. The Contractor shall install all system components and appurtenances in accordance with the manufacturer’s instructions, ANSI C2, and furnish all necessary interconnections, services, and adjustments required for a complete and operable system as specified. Control signals, communications, and data transmission lines grounding shall be installed as necessary to preclude ground loops, noise, and surges from affecting system operation. Equipment, materials, installation, workmanship, inspection, and testing shall be in accordance with manufacturers’ recommendations and as modified herein.

B. Consult the manufacturer's installation manuals for all wiring diagrams, schematics, physical equipment sizes, etc., before beginning system installation. Refer to the Riser/Connection diagram for all schematic system installation/termination/wiring data.

C. All equipment shall be attached to walls and ceiling/floor assemblies and held firmly in place (e.g., sensors shall not be supported solely by suspended ceilings). Fasteners and supports shall be adequate to support the required load.

D. Current Site Conditions: The Contractor shall visit the site and verify site conditions are in agreement with the design package. The Contractor shall report all changes to the site or conditions that will affect performance of the system to the COTR a report as defined in paragraph Group II Technical Data Package. The Contractor shall take no corrective action without written permission from the COTR.

3.3 System Programming

A. General

1. The following Loading Sheet submittals are required:
   a. Shop Drawings – Technical Data Group I Submittal
   b. Final Construction Document Submittal – Technical Group VI Submittal
2. Loading Sheets
   a. See the attached loading sheets. Refer to Section 1 regarding loading sheet submissions.
   b. System Configuration and Data Entry:
      1) The contractor is responsible for providing all system configuration and data entry for the SMS and subsystems (e.g., intercom, Inovonics wireless, digital video recorders, network video recorders). All data entry shall be performed to Smithsonian Institution's standards & guidelines. The Contractor is responsible for participating in all meetings with the Owner Security Lead and the client to compile the information needed for data entry. These meetings shall be established at the beginning of the project and incorporated in to the project schedule as a milestone task. The contractor shall be responsible for all data collection, data entry, and system configuration. The contractor shall collect, enter, & program and/or configure the following components:
         a) Access control system components
         b) All intrusion detection system components
         c) Video surveillance, control and recording systems
         d) Intercom systems components
         e) All other security subsystems shown in the contract documents
3. Graphics
   a. Based on as-built drawings developed for the construction project, create all map sets and system icons showing locations of all alarms and field devices.
   b. Produce graphical maps of all alarm points installed under this contract including perimeter and exterior alarm points.
   c. Create and install all graphics needed to make the system operational.
   d. Utilize data from the contract documents, Contractor's field surveys, and all other pertinent information in the Contractor's possession to complete the graphics.
   e. Identify and request from the COTR and the Owner Security Engineer, any additional data needed to provide a complete graphics package.
   f. Graphics shall have sufficient level of detail for the system operator to assess the alarm.
   g. Supply hard copy, color examples at least 203.2 x 254 mm (8 x 10 in) of each type of graphic to be used for the completed Security system. Deliver the graphics examples to the COTR and the Owner Security Engineer for review and approval at least 90 calendar days prior to the scheduled date the Contractor requires them.

B. Alarm / Event Identification Format for Monitoring Station

1. Initial Descriptor
   a. The Initial Descriptor is a brief description of the event taking place and shall be no more than 50 characters in length. Contact Owner Security Lead for any Building ID, Area ID or Device / Condition Type not listed below.
   b. Building ID

1) This is a two (2) or four (4) character identification of the building where the event is taking place. This shall follow the standard format as shown in the listing below. Confirm buildings and identifications with the owner.

Building	ID	Building	ID
African Art	AA	Hirshhorn	HH
Air and Space	AS	Horticulture Greenhouse	HG
American History	AH	Library (STRI)	LB
American Indian (NY)	IN	Maintenance Shop (STRI)	TP
American Indian Mall	IM	MSC (Suitland)	MS
Anacostia	AN	NAOS (STRI)	NAOS
Ancon (STRI)	AC	National Zoological Park	NZ
Apollo Drive	AD	Natural History	NH
Arts and Industries	AB	NMAAHC	AAHC
Barro Colorado (STRI)	BC	Patent Office Building	PB
Bocas del Toro (STRI)	BT	Pennsy Drive	SISC
Capital Gallery	CG	Postal Museum	PM
Columbia Warehouse	CW	Quad	SQ
Conference Center (STRI)	CC	Renwick	RW
Cooper Hewitt (NY)	CH	Research Branch (NY)	RB
CRC (Suitland)	CR	Sackler	SK
Culebra (STRI)	CU	SAO Arizona	AZ
Dulles	DL	SAO Hilo HI	HI
Engineering Building (STRI)	EB	SAO Mauna Kea HI	MK
Folk Life Festival	FF	SCBI Front Royal VA	FZ
Freer	FR	SERC	SR

Garber (Suitland)	GB	Tupper Facility (STRI)	TP
Herndon	HN	Victor Building	VB

c. Monitor Point Location
   1) This is the monitor point physical location. There is no separation between the Building ID and the Monitor Point Location.
   2) Description of iStar:
      a) The Monitoring Point Location includes a two (2) character descriptor for the iStar Cluster, followed by a colon and then a two (2) character descriptor for the iStar panel followed by a colon then a one (1) character space.
      b) Next is the one (1) character descriptor for ACM # (1 or 2) ‘ACM:#’ followed by a one (1) character space.
      c) Next is the device connection location for where the device terminates using ‘I8’ for an I-8 module, ‘R8’ for an R-8 module, ‘RDR’ for a reader module, followed by a colon. Then a one (1) character number representing which module it is (i.e. the fourth I-8 module),

followed by a colon. Last is a one (1) character number representing the input number on the module; the inputs on the ACM board require a two (2) character number.

3) Example of iStar
   a) xx01:01 ACM:1:i06 = iStar Cluster 01, iStar #01, ACM #1, main panel, sixth input
   b) xx01:02 ACM:2 I8:3:i6 = iStar Cluster 01, iStar #02, ACM#2, I-8 module #3, sixth input
   c) xx02:16 ACM:1 R8:2:o4 = iStar Cluster 02, iStar #16, ACM #1, R-8 module #2, fourth output
   d) xx01:15 ACM:1 RDR:4:i2 = iStar Cluster 01, iStar #15, ACM#1, reader module #4, second input

d. Area ID (Type)
   1) This is a brief description of the location of the alarm / event. There shall be a one (1) character space between the Monitor Point Location and the Area ID. At a minimum level of description, this shall follow the standard format as shown in the listing below. Confirm areas and identifications with the owner.

Description	Area ID
Vault	VAULT
Collection Storage	COLL STORAGE
Archive Areas	ARCHIVE
Collection Archive Areas	COLL ARCHIVE
Collection Processing / Preparation Areas	COLL PREP ROOM
Alcohol Storage Areas	ALCOHOL
Cold Collection Storage Areas	COLD STORAGE
Curatorial Areas	CURATORIAL
Exhibit Gallery (XX To be replaced with Gallery No.)	GALLERY XX
Exhibit Alarms Located in Lobbies or Reception Areas	LOBBY EXHIBIT
Exhibit or Artifact Alarms in “Other” Areas	MISC EXHIBIT
Registrar Areas	REGISTRAR
Perimeter Door, Glass Break, Motion	PERIMETER
Staff Cafeteria	STAFF CAFE
Public Access Cafeteria	PUBLIC CAFE
Public Staff Separation Door	STAFF DOOR
Museum Shop	MUSEUM SHOP
Museum Shop Storage Areas	MUSEUM SHOP ST
Cash Processing Areas	CASH ROOM
Automated Teller Machines	ATM

Child Care Centers	CHILD CARE
Photo Processing Laboratories	PHOTO LAB
Animal Area for Public Viewing	ANIMAL EXHIBIT
Animal Area not for Public Viewing	ANIMAL OFF-EXHIBIT
Outside Animal Area	ANIMAL YARD
Marine Animal Area	ANIMAL TANK
Animal/Keeper Area	KEEPER WORKROOM
Keeper (only) Area	KEEPER SPACE

e. Device / Condition Type

1) This is a two (2) digit descriptor for the type of device / condition that initiated the alarm / event. There is a one (1) character space between the Area ID and the Device / Condition Type. This follows the standard format as shown in the listing below. Confirm device / condition identifications with the owner.

Type of Device / Condition	ID
Door Contact	DC
Motion Detector	MD
Vibration Detector	VD
Glass Break Detector	GB
Hold Up / Duress Button	HU
Bill Trap (Last Bill Detector)	BT
Door Held Open	HO
Door Forced Open	FO
Power Failure	PF
Tamper Alarm	TP

Type of Device / Condition	ID
Window Contact	WC
Hazard Alarm	HZ
Case / Display Alarm	CA
Low / Missing Battery	LB
Communication Failure	CF
Security Fault	SF
UPS / Power Supply Trouble	PT
Restore / Reset	RS
Proximity Alarm	PA
Pressure Mat	PM

Type of Device / Condition	ID
Delayed Egress Pre Alarm	DE
Temperature Alarm	TA
Shock Sensor	SS
Photo Beam	PB
Request to Exit	REX
Seismic Alarm	SA
Video Loss	VL
Supervision Error	SE

Type of Device / Condition	ID
HVAC Duct Alarm	DA
Lock Secure	LS
Battery Fail	BF
Tamper Alarm	TP
Lock	LK
Door State Monitor	DSM
Sounder	SD

f. Examples for the Initial Descriptor:
   1) National Museum of Natural History monitor point location DGP chain 1 DGP number 2 first I-8 input 4, collection storage motion detector in alarm.
      a) NH01:02 I8:1:i4 COLL STORAGE MD
   2) Arts and Industries Building monitor point location DGP chain 3 DGP number 4 main panel input 6, public staff separation door contact.
      a) AB03:04 M:i6 STAFF DOOR DC

2. Secondary Descriptor
   a. The Secondary Descriptor is 128 characters
   b. This is an in-depth description for the location of the alarm / event taking place. If multiple devices are connected to the same monitor point the number of devices should be indicated.
   c. Examples for the secondary descriptor
      1) National Museum of Natural History monitor point location DGP chain 1, DGP number 6, I32 board input 31, collection storage motion detector in alarm.
         a) NH01:06 I32:i31 COLL STORAGE MD: NMNH 5th Fl East Wing Rm. 5210 Motion Detectors (3).
      2) Arts and Industries Building monitor point location DGP chain 1, DGP number 2 third I-8 board input 5, public staff separation door forced open.
         a) AB01:02 I8:3:i5 STAFF DOOR FO: AIB 1st Fl East Hall Card Access Door Forced Open.
   d. Linked Instruction Event
      1) This is a full instructional description for the processing of the alarm / event and follows the standard format of:
         a) Repeat 50 character descriptor
         b) In-depth description of location
         c) Response instructions
         d) Logging instructions
         e) Reset instructions
         f) Nearest camera location (If multiple views are available list all)
         g) DGP input is connected to
   e. Examples for the linked instructional event
      1) National Museum of Natural History monitor point location DGP chain 1 DGP number 3, I32 board input 31, collection storage motion detector in alarm.

Step	Display
1	NH01:03 I32:i31 COLL STORAGE MD

Step	Display
2	5th fl east wing Rm. 5210 motion detectors (3)
3	Dispatch officer to investigate and report findings
4	Log officer's name and actions into computer log
5	Device resets automatically when motion has stopped
6	Nearest camera is No. (camera Nos. provides other views)
7	Device connected to DGP

A. Alarm / Event Mapping Requirements

1. General

a. All maps associated with alarm / event call-ups shall be a black foreground on a white background.

2. Map Information Screen

a. The map information screen shall provide access to three different map levels for each event

b. Building Floor Map

1) This map has the quadrant where the event is taking place line colored blue or the colored event icon in place. Identify this map with the building name and floor at the bottom of the map.

c. Quadrant Map

1) This is the map called up by the system automatically upon event activation. Identify this map with the building name, floor number, and quadrant at the bottom of the map. This map has the icon representing the event shown upon call up. Clicking on the icon or a map "zoom in" icon at this map level calls up the Area map.

d. Area Map

1) This map represents the local area of the building where the event is taking place. This map contains all icons associated with this area. These icons are "living", changing colors as the associated devices change state. Identify this map with the building name, floor number, quadrant, and area name at the bottom of the map.

3. Mapping icons

a. Mapping icons are "living" changing color as the associated devices change state.

1) Red = alarm / activated state

2) Green = secure / normal state

3) Yellow = masked, shunted, accessed, etc. state

b. Group and position mapping icons represented on the Area map as follows:

1) Motion detectors providing back up to perimeter door(s) / window(s).

a) Place a single icon in a close geographical position to the protected door(s) or window(s), to represent all devices in the zone or group

2) Motion detectors providing back up to public staff separation doors and other internal doors.

a) Place a single icon in a close geographical position to the protected door.

3) Motion detectors providing volumetric protection of a room.

a) Place a single icon in the center of the room, to represent all devices in the zone or group

4) Glass break detectors protecting perimeter windows

a) Place a single icon in a close geographical position to the center of the window or group of windows, to represent all devices in the zone or group

5) Door contacts protecting individual perimeter doors or logical groups of perimeter doors.

a) Place a single icon in a close geographical position to the center of the door or group of doors, to represent all devices in the zone or group

6) Delayed egress pre alarm contacts protecting individual doors or logical groups of doors.

a) Place a single icon in a close geographical position to the center of the door or group of doors, to represent all devices in the zone or group.

7) Window contacts protecting individual perimeter windows or logical groups of perimeter windows.

a) Place a single icon in a close geographical position to the center of the window or group of windows, to represent all devices in the zone or group.

8) Card reader events to include door forced open and door held open alarms.

a) A single icon shall be the same as the door contact protecting the door.

b) Icon descriptor shall identify the appropriate event taking place.

9) Tamper alarms protecting panels in security closets.

a) Place a single icon in the center of the room, to represent all devices in the zone or group.

10) Tamper alarms protecting individual devices or logical groups of devices.

a) Place a single icon in close geographical position to the device or group of devices, to represent all devices in the zone or group.

11) Exhibit level case/display alarms.

a) A single icon shall represent all devices protecting the case/display.

b) Place icon directly over the case/display so the case outline is still visible below (around) the icon

c) Icon descriptor shall identify the appropriate device in alarm.

12) Vibration detectors protecting any physical barrier or point of entry.

a) Place a single icon in close geographical position to the physical barrier / point of entry or group of devices, to represent all devices in the zone or group.

B. System Programming

1. General Programming Requirements

a. Use the following section to identify the anticipated level of effort (LoE) required setup, program, and configuring the ESS.
b. Provide all setup, configuration, and programming to include data entry for the SMS and subsystems (e.g., video system, intercoms, digital video recorders, intrusion devices, maps and icons, time synchronization, including integration of subsystems to the SMS.

2. Configuration Management of Servers

a. Provide Owner the security system servers for baseline configuration 90 days before system programing begins.
b. Once the security system server is baselined according to OCIO requirements the server will be returned to the security contractor for system programing.
c. There are other programming requirements the contractor needs assistance on as follows:

1) Contractor has to enter the Levels and Permissions of programing.

2) Synchronize system with Genetec server

3) Employee card reader data will be automatically entered in the system server

4) Contractor will enter Card reader Clearances

3. Level of Effort for Programming

a. Perform and complete system programming (including all data entry) at an offsite location using the Contractor's own copy of the Genetec software which must be the same version Owner is using.
b. Deliver the completed forms (loading sheets) to the COTR and Owner Security Engineer for review and approval at least 90 calendar days prior to the scheduled date the Contractor requires it.
c. Once system programming has been completed, deliver the programming to the COTR and the PPSD Security engineer on data entry forms (loading sheets) and an approved electronic medium.
d. System programming may not be uploaded until the COTR and the Owner security Engineer provide written approval.
e. The Contractor is responsible for backing up the system prior to uploading new programming data.
f. Additional programming requirements are provided as follows.

1) Programming for New SMS Server

a) Provide all other system related programming.

b) Upload personnel information (e.g., ID Cards backgrounds, names, access privileges, personnel photos, access schedules, personnel groupings)

c) Coordinate with Owner Security Lead for device configurations, standards, and groupings. Owner shall provide database to support Contractor's data entry tasks.

d) Conduct a weekly coordination meeting and work alongside Owner Security Lead to ensure data uploading is performed without incident of loss of function or data loss.

2) Programming for Existing SMS Servers

a) Perform all related system programming except for personnel data as noted.

b) The contractor is not responsible for uploading personnel information (e.g., ID Cards backgrounds, names, access privileges, access schedules, personnel groupings).

c) Conduct a weekly coordination meeting and work alongside Owner Security Lead to ensure data uploading is performed without incident of loss of function or data loss.

d) Perform system programming for SMS servers using the Contractor's own server and software. These servers shall not be connected to existing devices or systems at any time.

g. Identify any additional data needed to provide a complete and operational system as described in the contract documents and request the information from the COTR and the Owner Security Engineer.

h. Programming effort requires a high level of coordination between Contractor and Owner Security Lead to ensure programming is performed in accordance with Owner requirements and programming uploads do not disrupt existing systems functionality.

1) Conduct a weekly coordination meeting and work alongside Owner Security Leadto ensure data uploading is performed without incident of loss of function or data loss.

i. Ensure data uploading is performed without incident or loss of function or data loss.

j. The following Level of Effort Chart is provided to communicate the expected level of effort required by contractors onOwner ESS projects. Determine actual levels of effort prior to bidding on the project.

SMS Setup & Configuration		
Description of Tasks	Develop System Loading Sheets	e.g., program monitoring stations, programming networks, interconnections between CCTV, intercoms, time synchronization
	Coordination	e.g., retrieve IP addresses, naming conventions, standard event descriptions, programming templates, coordinate special system needs
	Initial Set-up Configuration	e.g., Load system Operating System and Application software, general system configurations
	Graphic Maps	e.g., develop naming conventions, develop file folders, confirming accuracy of AutoCAD Floor Plans, convert file into jpeg file then to bitmap.bmp file
	System Programming	e.g., program monitoring stations, programming networks, interconnections between CCTV, intercoms, time synchronization
	Final Checks	e.g., check all system diagnostics (e.g., clients, panels)
	Level of Effort (Typical Tasks)	Load and set-up 4-6 CDs and configure servers (to configure Loading and Configuring software Administrative account, audit log Keystrokes, mouse clicks, multi-screen configuration
Electronic Entry Control Systems		
Description of Tasks	Develop System Loading Sheets	e.g., setup of device, door groups & schedules, REX, Locks, link graphics
	Coordination	e.g., confirming device configurations, naming conventions, event description and narratives
	Initial Set-up Configuration	e.g., enter data from loading sheets; configure components, link events, cameras, and graphics

	Graphic Maps	e.g., develop naming conventions, develop file folders, confirming accuracy of AutoCAD Floor Plans, convert file into jpeg file then to bitmap.bmp file
	System Programming	e.g., setup of device, door groups & schedules, REX, Locks, link graphics
	Final Checks	e.g., performing entry testing to confirm correct set-up and configuration
	Level of Effort (Typical Tasks)	e.g., creating a door, door configuration, adding request to exit, door monitors and relays, door timers, door related events (e.g., access, access denied, forced open, held open), linkages, controlled areas, advanced door monitoring, time zones, sequence of operations
Intrusion Detection Systems		
Description of Tasks	Develop System Loading Sheets	e.g., enter door groups & schedules, link devices - REX, lock, & graphics
	Coordination	e.g., confirming device configurations, naming conventions, event description and narratives
	Initial Set-up Configuration	e.g., enter data from loading sheets; configure components, link events, cameras, and graphics
	Graphic Maps	e.g., develop naming conventions, develop file folders, confirming accuracy of AutoCAD Floor Plans, convert file into jpeg file then to bitmap.bmp file
	System Programming	e.g., enter door groups & schedules, link devices - REX, lock, & graphics
	Final Checks	e.g., walk test, device position, and masking
	Level of Effort (Typical Tasks)	e.g., setting up monitoring and control points (e.g., motion sensors, glass breaks, vibration sensor, strobes, sounders) creating intrusion zones, creating arm/disarm panel, timed sequences, time zones, icon placements on graphic maps, clearance levels, events (e.g., armed, disarmed, zone violation, device alarm activations), LCD reader messages,
CCTV Systems		
Description of Tasks	Develop System Loading Sheets	e.g., programming call-ups recording
	Coordination	e.g., confirming device configurations, naming conventions
	Initial Set-up Configuration	e.g., enter data from loading sheets; camera naming convention, sequences, configure components)
	Graphic Maps	e.g., develop naming conventions, develop file folders, confirming accuracy of AutoCAD Floor Plans, convert file into jpeg file then to bitmap.bmp file
	System Programming	e.g., programming call-ups recording
	Final Checks	e.g., confirm area of coverage, call-up per event generated and recording rates
	Level of Effort (Typical Tasks)	e.g., setting up cameras points, recording ratios (e.g., normal, alarm event) timed recording, linkages, maps placements, call-ups
Intercoms Systems		
Description of Tasks	Develop System Loading Sheets	e.g., programming events & call-ups
	Coordination	e.g., confirming device configurations, naming conventions, event description and narratives

	Initial Set-up Configuration	e.g., enter data from loading sheets; configure components, link events, cameras, and graphics
	Graphic Maps	e.g., develop naming conventions, develop file folders, confirming accuracy of AutoCAD Floor Plans, convert file into jpeg file then to bitmap.bmp file
	System Programming	e.g., programming events & call-ups
	Final Checks	e.g., confirm operation, SMS event generation and camera call-up
	Level of Effort (Typical Tasks)	e.g., setup linkages, events for activations, device troubles, land devices on graphic maps
Console Monitoring Components		
Description of Tasks	Develop System Loading Sheets	N/A
	Coordination	per monitor
	Initial Set-up Configuration	per monitor
	Graphic Maps	e.g., develop naming conventions, develop file folders, confirming accuracy of AutoCAD Floor Plans, convert file into jpeg file then to bitmap.bmp file
	System Programming	N/A
	Final Checks	per monitor
	Level of Effort (Typical Tasks)	N/A

Note: Programming tasks are supported through the contractor's development of the Technical Data Package Submittals.

SECTION 28 05 09.10 - SURGE PROTECTION FOR ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 SYSTEM DESCRIPTION

A. This specification is for surge protection for electronic security systems (ESS).

B. Transient Voltage Surge Suppression:

1. Protect cables and conductors extending beyond building façade, except fiber optic cables, which serve as communication, control, or signal lines against Transient Voltage surges and have Transient Voltage Surge Suppression (TVSS) protection.
2. The TVSS device shall be UL listed in accordance with Standard TIA 497B.
3. Lighting and surge suppression shall be a multi-strike variety and include a fault indicator.
4. Provide protection at the field device and on each wire line circuit at the first accessible location within the building but not more than 50 ft (15 m) of the building cable entrance.
5. Fuses shall not be used for surge protection.
6. Test the inputs and outputs in both normal mode and common mode to verify there is no interference.
7. General Performance Requirements

    a. A 10-microsecond rise time by 1000 microsecond pulse width waveform with a peak voltage of 1500 volts and a peak current of 60 amperes.
    b. An 8-microsecond rise time by 20-microsecond pulse width waveform with a peak voltage of 1000 volts and a peak current of 500 amperes.

1.2 SUMMARY

A. This Section includes the following:

1. TVSS

1.3 REFER TO 280500.10 FOR ALL OTHER PART I REQUIREMENTS

PART 2 - PRODUCTS

2.1 TVSS, POWER

A. Acceptable Manufacturers

1. Ditek
2. Approved Equivalent

B. Ditek DTK-4LVLPCR or approved equivalent

C. Minimum Features and Specifications

1. Suitable for surface mounting or DIN rail (DTK_DRK required) within the enclosure/rack.
2. Protects power (12V / 24V), data and LED circuits
3. Connection Method #22 - #16 AWG screw terminals
4. Single ground point for all protected circuits
5. Operating Temperature: -40 to 158 deg F (-40 to 70 deg C)

2.2 TVSS, ETHERNET POE

A. Ditek DTK-MRJPOE or approved equivalent

B. Minimum Features and Specifications

1. Suitable for surface mounting or DIN rail (DTK_DRK required) within the enclosure/rack.
2. Protects power, video and data PoE circuits
3. RJ45 connection with external grounding screw
4. Operating Temperature: -40 to 158 deg F (-40 to 70 deg C)

PART 3 - EXECUTION

3.1 GROUNDING

A. Comply with requirements in Section 270526.10 "Grounding and Bonding for Security Systems" for grounding conductors and connectors.

3.2 REFER TO 280500.10 FOR ALL OTHER PART III REQUIREMENTS

END OF SECTION

SECTION 28 05 11- CYBER SECURITY FOR ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes criteria to enhance project cyber security.
B. Related Documents

1. 281300 - Access Control
2. 281523 - Intercom and Public Address
3. 281600 - Intrusion Detection
4. 282000 - Video Surveillance

1.2 REFERENCES

A. Abbreviations

1. AD – Active Directory
2. DMZ – Demilitarized Zone
3. FTP – File Transfer Protocol
4. ICMP – Internet Control Message Protocol
5. IT – Information Technology
6. NTP – Network Time Protocol
7. SNMP – Simple Network Management Protocol
8. SSL – Secure Sockets Layer
9. TLS – Transport Layer Security
10. VLAN – Virtual Local Area Network
11. VPN – Virtual Private Network

B. Reference Standards and Guidance

1. National Institute of Standards and Technology (NIST) CyberSecurity Framework
2. ISO/IEC 27000 Family of Standards
3. IEEE 802.1x – 2010 Standard for Local and Metropolitan Area Networks--Port-Based Network Access Control
4. ANSI/CAN/UL 2900-1:2017 - Standard for Software Cybersecurity for Network-Connectable Products, Part 1: General Requirements
5. Center for Internet Security – CIS Controls Version 7
6. Manufacturer Cybersecurity Hardening Guide

1.3 SUBMITTALS

A. Informational

1. Manufacturer cyber hardening manuals or guides.
2. Certification report by an acceptable independent testing organization of successful cyber vulnerability test of proposed product,
3. Certification testing shall have been completed no more than 12 months prior to submittal.
4. Contractor’s plan for secure assignment of unique strong passwords to all installed products requiring passwords.
5. Contractor’s plan for assignment of administrative and operator rights to installed products.
6. List of cloud services and providers to be provisioned.

B. Closeout

1. Asset Management

a. Secured spreadsheet or equivalent summary of all security devices and software installed to include:

1) Manufacturer, model, and firmware or software version
2) Serial number and MAC address, if applicable
3) Network settings, including IP address, VLAN or subnet mask, default gateway
4) Equipment location
5) Device user names and passwords

2. Licenses

a. License files and license key numbers
b. Additional codes required for operation

3. Services and ports

a. Summary of enabled and disabled product services
b. Summary of all open ports

4. Security recommendations

a. Summary of additional recommended physical, network, or program actions to enhance the cyber security of the installation.

5. Post-installation vulnerability test report

1.4 QUALIFICATIONS

A. Manufacturer shall have a documented process for secure development and testing of software code.
B. Manufacturer shall have a secure process for verifying and provisioning firmware and software updates.
C. Contractor personnel assigned to device programming and software installation shall have been certified in these tasks by the Manufacturer or possess industry certifications acceptable to the Manufacturer and the Owner attesting to the necessary competence.

1.5 SUPPORT

A. Manufacturer shall have a documented process for notifying and provisioning firmware or software updates to users of its products.

PART 2 - PRODUCTS

2.1 DEVICES

A. Security devices shall have the following properties:

1. Means to securely provision passwords
2. Controlled use of administrative privileges
3. Ability to synchronize with a common time base across all devices, such as an NTP server
4. Ability to disable all unneeded or unused services, including ICMP and discovery protocols
5. Option for encrypted communication and storage
6. Limitation on remote access
7. Support for secure versions of protocols to include HTTPS, Secure FTP, SNMP v3
8. Support for IEEE 802.1x, port-based network access control
9. Ability to prevent a valid digital certificate to third party and user processes

10. IP and MAC address filtering
11. Prompt for installer to change from default device password before security operation.

2.2 SERVERS

A. Servers shall be delivered with the server manufacturer, operating system(s) and provisioned applications full patched and testing to the latest supplier version.
B. Servers shall be provisioned with antivirus/anti-malware software acceptable to the Owner.
C. SQL (database) applications shall be provisioned on separate server(s).

2.3 CLIENTS

A. Client machines provided by the Contractor shall be delivered with the server manufacturer, operating system(s) and provisioned applications full patched and testing to the latest supplier version.
B. Supplied client machines shall be provisioned with antivirus/anti-malware software acceptable to the Owner.
C. Client shall be provisioned credentials in accordance with the principle of least privilege.
D. Client machines shall be provisioned with the minimum functionality required to perform their required tasks.

2.4 SOFTWARE

A. Application software shall have been developed in a secure coding environment, as certified by its manufacturer.
B. Software shall have been subjected to and successfully passed third party vulnerability testing within 12 months prior to Contractor proposal of the product.
C. Software shall have the ability to accept encrypted communication from remote client and field devices.
D. Required ports shall be clearly identified in the Manufacturer's documentation.
E. Software shall have configuration settings permitting back-up and failover in the event of the failure of its primary server.
F. Software shall have log capability to document user activity, performance, and usage patterns.
G. Review AI capable devices with Owner for use. Caution should be used when enabling any AI capable devices. Only enable AI capable devices with clear written direction from Owner.

2.5 NETWORK

A. The security system shall be isolated from other User systems via <firewall> <VLAN> <subnetting> in a manner acceptable to the User IT department.
B. Any network product deployed within this project shall be furnished with the latest manufacturer firmware.
C. Usernames and passwords, if applicable, shall be changed from their default value to be consistent with the strength of passwords provisioned in network connected devices.
D. Wireless Networks

1. Wireless transmission devices shall employ highest security suitable.
2. Wireless functionality shall be disabled on all devices not requiring it.

2.6 MOBILITY

A. Services for mobile services shall use only those ports recommended by the Manufacturer associated with the given service.
B. Mobile servers shall be placed in a DMZ with separate interfaces for internal and external access.
C. All non-essential protocols and services shall be disabled on the mobile services server.
D. Mobile services shall be provisioned with multi-factor authentication enabled.
E. Mobile communications shall be provisioned to operate only through HTTPS or secure VPN connections.

PART 3 - EXECUTION (NOT USED)

END OF SECTION

SECTION 28 05 13 – CONDUCTORS AND CABLES FOR ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. UTP cabling.
2. RS-232 cabling.
3. RS-485 cabling.
4. Control-voltage cabling.
5. Control-circuit conductors.
6. Fire alarm wire and cable.
7. Identification products.

1.3 DEFINITIONS

A. EMI: Electromagnetic interference.
B. IDC: Insulation displacement connector.
C. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control and signaling power-limited circuits.
D. Open Cabling: Passing telecommunications cabling through open space (e.g., between the studs of a wall cavity).
E. RCDD: Registered Communications Distribution Designer.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordinate layout and installation of electronic safety and security cabling with Owner's telecommunications and LAN equipment and service suppliers.
B. Coordinate telecommunications outlet/connector locations with location of power receptacles at each work area.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Installation data for UTP and optical-fiber cables as specified in TIA 569-C-1.

2. For coaxial cable, include the following installation data for each type used:

a. Nominal OD.
b. Minimum bending radius.
c. Maximum pulling tension.

B. Shop Drawings:

1. System Labeling Schedules: Electronic copy of labeling schedules, in software and format selected by Owner.
2. System Labeling Schedules: Electronic copy of labeling schedules that are part of the cabling and asset identification system of the software.

3. Cabling administration drawings and printouts.
4. Wiring diagrams to show typical wiring schematics, including the following:

    a. Cross-connects.
    b. Patch panels.
    c. Patch cords.

5. Cross-connects and patch panels. Detail mounting assemblies, and show elevations and physical relationship between the installed components.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified layout technician, installation supervisor, and field inspector.
B. Source quality-control reports.

C. Field quality-control reports.

1.7 QUALITY ASSURANCE

A. Testing Agency Qualifications: An NRTL.

1. Testing Agency's Field Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: **25** or less.
2. Smoke-Developed Index: **50** or less.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 BACKBOARDS

A. Backboards: Plywood, fire-retardant treated, 3/4 by 48 by 96 inches .Comply with requirements for plywood backing panels in Section 061000 "Rough Carpentry."

2.3 UTP CABLE

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Belden Inc.
2. Berk-Tek Leviton; a Nexans/Leviton alliance.
3. CommScope, Inc.
4. Hubbell Electrical Solutions; Hubbell Incorporated.
5. Mohawk Cable; brand of Belden, Inc.
6. West Penn Wire; brand of Belden, Inc.

B. Description: 100-ohm, four-pair UTP, covered with a **purple** thermoplastic jacket.

1. Comply with ICEA S-90-661 for mechanical properties.
2. Comply with TIA-568-C.1 for performance specifications.
3. Comply with TIA-568-C.2, Category 6A.
4. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444 and NFPA 70 for the following types:

    a. Communications, Plenum Rated: Type CMP or Type MPP, complying with NFPA 262.

2.4 UTP CABLE HARDWARE

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. American Technology Systems Industries, Inc.
2. Belden Inc.
3. Hubbell Electrical Solutions; Hubbell Incorporated.
4. Leviton Manufacturing Co., Inc.
5. Panduit Corp.
6. West Penn Wire; brand of Belden, Inc.

B. UTP Cable Connecting Hardware: IDC type, using modules designed for punch-down caps or tools. Cables shall be terminated with connecting hardware of the same category or higher.

C. Connecting Blocks: 110-style for Category 6A Provide blocks for the number of cables terminated on the block, plus 25 percent spare. Integral with connector bodies, including plugs and jacks where indicated.

2.5 RS-232 CABLE

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Allied Wire & Cable Inc.
2. Belden Inc.
3. Southwire Company, LLC.

B. Standard Cable: NFPA 70, Type CM.

1. Three, No. 22 AWG, stranded (7x30) tinned copper conductors.
2. Polypropylene insulation.
3. Aluminum foil-polyester tape shield with 100 percent shield coverage.
4. PVC jacket.
5. Conductors are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
6. Flame Resistance: Comply with UL 1581.

C. Plenum-Rated Cable: NFPA 70, Type CMP.

1. Three, No. 22 AWG, stranded (7x30) tinned copper conductors.
2. PE insulation.
3. Aluminum foil-polyester tape shield with 100 percent shield coverage.
4. Fluorinated ethylene propylene jacket.
5. Conductors are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
6. Flame Resistance: Comply with NFPA 262.

2.6 RS-485 CABLE

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Allied Wire & Cable Inc.
2. Belden Inc.
3. Southwire Company, LLC.

B. Standard Cable: NFPA 70, Type CM or Type CMG.

1. Paired, two pairs, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with UL 1581.

C. Plenum-Rated Cable: NFPA 70, Type CMP.

1. Paired, two pairs, No. 22 AWG, stranded (7x30) tinned copper conductors.
2. Fluorinated ethylene propylene insulation.
3. Unshielded.
4. Fluorinated ethylene propylene jacket.
5. Flame Resistance: NFPA 262, Flame Test.

2.7 CONTROL-VOLTAGE CABLE

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Allied Wire & Cable Inc.
2. Belden Inc.
3. Southwire Company, LLC.

B. Paired Cable: NFPA 70, Type CMG.

1. One pair, twisted, No. 16 AWG, stranded (19x29)] and No. 18 AWG, stranded (19x30)] tinned copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with UL 1581.

C. Plenum-Rated, Paired Cable: NFPA 70, Type CMP.

1. One pair, twisted, No. 16 AWG, stranded (19x29) and No. 18 AWG, stranded (19x30)] tinned copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with NFPA 262.

2.8 CONTROL-CIRCUIT CONDUCTORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Allied Wire & Cable Inc.
2. Belden Inc.
3. Southwire Company, LLC.

B. Class 1 Control Circuits: Stranded copper, Type THHN-THWN, complying with UL 83, in pathway XLP/PVC tray cable, complying with UL 83, in cable tray].
C. Class 2 Control Circuits: Stranded copper, Type THHN-THWN, complying with UL 83, in pathway, concealed in building finishes.
D. Class 3 Remote-Control and Signal Circuits: Stranded copper, Type TW or TF in pathway, complying with UL 83.

2.9 CONSOLIDATION POINTS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. American Technology Systems Industries, Inc.
2. Belden Inc.
3. Chatsworth Products, Inc.
4. Dynacom Corporation.
5. Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
6. Molex Connected Enterprise Solutions; business of Molex, LLC; Koch Industries.
7. Ortronics, Inc.
8. Panduit Corp.
9. Siemon Co. (The).

B. Description: Consolidation points shall comply with requirements for cable connecting hardware.

1. Number of Terminals per Field: One for each conductor in assigned cables.

2. Number of Connectors per Field:

a. One for each four-pair UTP cable indicated.
b. One for each four-pair conductor group of indicated cables, plus 25 percent spare positions.

3. Mounting: Recessed in ceiling.
4. NRTL listed as complying with UL 50 and UL 1863.
5. When installed in plenums used for environmental air, NRTL listed as complying with UL 2043.

2.10 IDENTIFICATION PRODUCTS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Brady Corporation.
2. HellermannTyton.
3. Kroy LLC.
4. Panduit Corp.

B. Comply with TIA-606-B and UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.
C. Comply with requirements in Section 260553 "Identification for Electrical Systems."

2.11 SOURCE QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to evaluate cables.
B. Factory test UTP and optical-fiber cables on reels according to TIA-568-C.1.
C. Factory test UTP cables according to TIA-568-C.2.
D. Factory test multimode optical fiber cables according to TIA-526.14-B and TIA-568-C.3.

E. Factory sweep test coaxial cables at frequencies from 5 MHz to 1 GHz. Sweep test shall test the frequency response, or attenuation over frequency, of a cable by generating a voltage whose frequency is varied through the specified frequency range and graphing the results. Structural Return Loss shall be less than 20 db.
F. Cable will be considered defective if it does not pass tests and inspections.
G. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 INSTALLATION OF HANGERS AND SUPPORTS

A. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems" for installation of supports for cables.

3.2 WIRING METHOD

A. Install wiring in metal pathways and wireways.

1. Minimum conduit size shall be **3/4 inch**. Control and data-transmission wiring shall not share conduits with other building wiring systems.
2. Comply with requirements in Section 280528 "Pathways for Electronic Safety and Security."
3. Comply with requirements in Section 260536 "Cable Trays for Electrical Systems."
4. Comply with requirements in Section 270536 "Cable Trays for Communications Systems."

B. Install cable, concealed in accessible ceilings, walls, and floors when possible.
C. Wiring on Racks and within Enclosures:

1. Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIM's "Cabling Termination Practices" chapter. Cable ties shall not be excessively tightened such that the transmission characteristics of the cable are altered.
2. Install lacing bars and distribution spools.
3. Separate power-limited and non-power-limited conductors as recommended in writing by manufacturer.
4. Install conductors parallel with or at right angles to sides and back of enclosure.
5. Connect conductors associated with intrusion system that are terminated, spliced, or interrupted in any enclosure onto terminal blocks.
6. Mark each terminal according to system's wiring diagrams.
7. Make all connections with approved crimp-on terminal spade lugs, pressure-type terminal blocks, or plug connectors.

3.3 INSTALLATION OF CONDUCTORS AND CABLES

A. Comply with NECA 1 and NFPA 70.
B. Conductors: Size according to system manufacturer's written instructions unless otherwise indicated.
C. Do not install conductors and cables that are wet, moisture damaged, or mold damaged.

D. Install UTP, optical-fiber, and coaxial cables and connecting materials after spaces are complete and dry, and HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

E. General Requirements for Cabling:

1. Comply with TIA-568-C.1.
2. Comply with BICSI ITSIM, Ch. 6, "Cable Termination Practices."
3. Terminate all conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, and cross-connect and patch panels. Leave a minimum of 6 inches (150 mm) of slack at outlet terminations and coil loosely into box after termination on outlet fitting.
4. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inches (760 mm) and not more than 6 inches (150 mm) from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
5. Maintain minimum cable bending radius during installation and termination of cables.
6. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
7. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.
8. Pulling Cable: Comply with BICSI ITSIM, Ch. 4, "Pulling Cable." Monitor cable pull tensions. Do not exceed manufacturer's rated cable-pulling tension.
9. Riser Cable: Riser cable support intervals shall be in accordance with manufacturer's recommendations.
10. Comply with Section 280544 "Sleeves and Sleeve Seals for Electronic Safety and Security Pathways and Cabling."

F. UTP Cable Installation: Install using techniques, practices, and methods that are consistent with Category 6A rating of components and that ensure Category 6A performance of completed and linked signal paths, end to end.

1. Comply with TIA-568-C.2.
2. Install 110-style IDC termination hardware unless otherwise indicated.
3. Do not untwist UTP cables more than 1/2 inch (12 mm) from point of termination to maintain cable geometry.

G. Optical-Fiber Cable Installation:

1. Comply with TIA-568-C.3.
2. Cable shall be terminated on connecting hardware that is rack or cabinet mounted.

H. Coaxial-Cable Installation:

1. Install outdoor connections in enclosures complying with NEMA 250, Type 4X. Install corrosion-resistant connectors with properly designed O-rings to keep out moisture.
2. Attach antenna lead-in cable to support structure at intervals not exceeding 36 inches (915 mm).
3. Install indoor cables in pathway.

I. Open-Cable Installation:

1. Install cabling with horizontal and vertical cable guides in telecommunication spaces with terminating hardware and interconnection equipment.
2. Suspend copper cable not in a wireway or pathway a minimum of 8 inches above ceilings by cable supports not more than 48 inches apart. Cable supports shall be fastened to structural members or floor slabs in accordance with Section 260529 "Hangers and Supports for Electrical Systems."

3. Cable shall not be run in contact with pipes, ducts, or other potentially damaging items. Cables shall not be run through structural members or use structural members, pipes, ducts, or equipment as a support.

J. Installation of Cable Routed Exposed under Raised Floors:

1. Install plenum-rated cable only.
2. Install cabling after the flooring system has been installed in raised floor areas.
3. Cable 72 inches long shall be neatly coiled not less than 12 inches in diameter below each feed point.

K. Separation from EMI Sources:

1. Comply with BICSI TDMM and TIA-569-C recommendations for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.
2. Separation between open communication cables or cables in nonmetallic pathways and unshielded power conductors and electrical equipment shall be as follows:

   a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 5 inches (127 mm).
   b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 12 inches (300 mm).
   c. Electrical Equipment Rating More Than 5 kVA: A minimum of 24 inches (600 mm).

3. Separation between communication cables in grounded metallic pathways and unshielded power lines or electrical equipment shall be as follows:

   a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 2-1/2 inches (64 mm).
   b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 6 inches (150 mm).
   c. Electrical Equipment Rating More Than 5 kVA: A minimum of 12 inches (300 mm).

4. Separation between cables in grounded metallic pathways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:

   a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
   b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 3 inches (75 mm).
   c. Electrical Equipment Rating More Than 5 kVA: A minimum of 6 inches (150 mm).

5. Separation between Cables and Electrical Motors and Transformers, 5 kVA or hp and Larger: A minimum of 48 inches (1200 mm).
6. Separation between Cables and Fluorescent Fixtures: A minimum of 5 inches (127 mm).

3.4 POWER AND CONTROL-CIRCUIT CONDUCTORS

A. 120-V Power Wiring: Install according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables" unless otherwise indicated.
B. Minimum Conductor Sizes:

1. Class 1 remote-control and signal circuits, No. 14 AWG.
2. Class 2 low-energy, remote-control and signal circuits, No. 16 AWG.
3. Class 3 low-energy, remote-control, alarm and signal circuits, No. 12 AWG.

3.5 CONNECTIONS

A. Comply with requirements in Section 281600 "Intrusion Detection" for connecting, terminating, and identifying wires and cables.
B. Comply with requirements in Section 281300 "Access Control" for connecting, terminating, and identifying wires and cables.
C. Comply with requirements in Section 282300 "Video Surveillance" for connecting, terminating, and identifying wires and cables.

3.6 FIRESTOPPING

A. Comply with requirements in Section 078413 "Penetration Firestopping."
B. Comply with TIA-569-C, "Firestopping" Annex A.
C. Comply with BICSI TDMM, "Firestopping Systems" Article.

3.7 GROUNDING

A. For communication wiring, comply with J-STD-607-A and with BICSI TDMM's "Grounding, Bonding, and Electrical Protection" chapter.
B. For low-voltage wiring and cabling, comply with requirements in Section 280526 "Grounding and Bonding for Electronic Safety and Security."

3.8 IDENTIFICATION

A. Identify system components, wiring, and cabling complying with TIA-606-B. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.9 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Visually inspect UTP and optical-fiber cable jacket materials for NRTL certification markings. Inspect cabling terminations to confirm color coding for pin assignments, and inspect cabling connections to confirm compliance with TIA-568-C.1.
2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.

3. Test UTP cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination but not cross connection.

    a. Test instruments shall comply with or exceed applicable requirements in TIA-568-C.2. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.

4. Optical-Fiber Cable Tests:

a. Test instruments shall comply with or exceed applicable requirements in TIA-568-C.1. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
b. Link End-to-End Attenuation Tests:

1) Multimode Link Measurements: Test at 850 or 1300 nm in one direction according to TIA-526-14-B, Method B, One Reference Jumper.
2) Attenuation test results for links shall be less than 2.0 db. Attenuation test results shall be less than that calculated according to equation in TIA-568-C.1.

5. Coaxial-Cable Tests:

a. Align and adjust system and pretest components, wiring, and functions to verify that they comply with specified requirements.
b. Replace malfunctioning or damaged items.
c. Retest until satisfactory performance and conditions are achieved.
d. Use an agile receiver and signal strength meter or spectrum analyzer for testing.
e. CCTV Sources: Connect receiver to the output of each CCTV signal source or the distribution amplifier associated with it.
f. Test Schedule: Schedule tests after pretesting has successfully been completed and system has been in normal functional operation for at least 14 days. Provide a minimum of 10 days' notice of test schedule.
g. Operational Tests: Perform tests of operational system to verify that system complies with Specifications. Include all modes of system operation. Test equipment for proper operation in all functional modes.
h. Distribution System Acceptance Tests:

1) Field-Strength Instrument: Rated for minus 40-db mV measuring sensitivity and a frequency range of 54 to 812 MHz, minimum. Provide documentation of recent calibration against recognized standards.
2) Signal Level and Picture Quality: Use a field-strength meter or spectrum analyzer, as well as a standard television receiver, to measure signal levels and check picture quality at all user-interface outlets.

a) Test the signal strength in db mV at 55, 151, 547, and 750 MHz.
b) Minimum acceptable signal level is zero db mV (1000 mV).
c) Maximum acceptable signal level over the entire bandwidth is 15 db mV.
d) Television receiver shall show no evidence of cross-channel intermodulation, ghost images, or beat interference.

i. Signal-to-Noise-Ratio Test: Use a field-strength meter to make a sequence of measurements at the output of the last distribution amplifier or of another agreed-on location in system. With system operating at normal levels, tune meter to the picture carrier frequency of each of the designated channels in turn, and record the level. With signal removed and input to corresponding headend amplifier terminated at 75 ohms, measure the level of noise at same tuning settings. With meter correction factor added to last readings, differences from first set shall not be less than 45 db.
j. Qualitative and Quantitative Performance Tests: Demonstrate reception quality of color-television program transmissions at each user interface from each designated channel and source. Quality shall be equal or superior to that obtained with performance checks specified below, using a standard, commercial, cable-ready, color-television receiver. Level and quality of signal at each outlet and from each service and source shall comply with the following Specifications when tested according to 47 604-12 76:

1) RF video-carrier level.
2) Relative video-carrier level.
3) Carrier-level stability, during 60-minute and 24-hour periods.
4) Broadband frequency response.
5) Channel frequency response.
6) Carrier-to-noise ratio.
7) RF visual signal-to-noise ratio.
8) Antenna combiner insertion loss.
9) Signal power splitter loss.
10) Cable connector attenuation.

11) Cross modulation.
12) Carrier-to-echo ratio.
13) Composite triple beat.
14) Second order beat.
15) Terminal isolation.
16) Terminal isolation between television and FM.
17) Hum modulation.

18) RF FM carrier level.
19) FM frequency response.
20) FM carrier-to-noise ratio.

D. Document data for each measurement. Print data for submittals in a summary report that is formatted using Table 10.1 in BICSI TDMM as a guide, or transfer the data from the instrument to the computer, save as text files, print, and submit.

E. End-to-end cabling will be considered defective if it does not pass tests and inspections.
F. Prepare test and inspection reports.

SECTION 280513.10 – SERVERS, WORKSTATIONS, AND STORAGE FOR ELECTRONIC SECURITY

1.1 SYSTEM DESCRIPTION

A. This specification is for the servers, workstations, and storage directly supporting the electronic security systems (ESS) including all software licenses.

1.2 SUMMARY

A. This Section includes the following:

1. Operator Workstations
2. Video Walls
3. Access Control Servers
4. NVR's
5. Intercom Server

1.3 REFER TO 280500.10 FOR ALL OTHER PART I REQUIREMENTS

PART 2 - PRODUCTS

2.1 OPERATOR WORKSTATION

A. Acceptable Manufacturers

1. Dell

B. Dell or approved equivalent

C. Minimum Features and specifications

1. OptiPlex 7000 Small Form Factor
2. 12th Gen Intel® Core™ i7-12700
3. Windows 10 Pro (Dell Technologies recommends Windows 11 Pro for business)
4. Intel® Integrated Graphics
5. 32 GB, DDR4
6. 512 GB Solid State Drive for OS and Security Center applications, with a minimum of 6 GB of free disk space to install the Security Center client application.
7. GbE network interface card
8. Dual NVIDIA® GeForce® RTX 2080 video card
9. Dell Pro Wireless Keyboard and Mouse (Black) KM5221W
10. Provide Dell Secured Wall Mount Kit (Below Counter)
11. Dell 27" Flat Screen Monitor
12. When discontinued, Provide Manufacturer Recommended Replacement

2.2 VIDEO WALL

A. 43" Flatscreen Monitor, quantity per plan

1. 43" Us 4K USB C Monitor U4320Q
2. Provide Compatible Z Bracket for Wall Mount

B. Dell Small Form Factor PC

1. OptiPlex 7000 Micro
2. 12th Gen Intel® Core™ i7-12700T
3. Windows 10 Pro (Dell Technologies recommends Windows 11 Pro for business)
4. 16 GB, DDR4
5. 512 GB, M.22230, PCIe NVe, SSD, Class 35
6. Dell Pro Wireless Keyboard and Mouse (Black) KM5221W
7. Provide Dell Wall Mount Kit (behind Monitor)
8. When discontinued, Provide Manufacturer Recommended Replacement

2.3 ACCESS CONTROL SERVER

A. Acceptable Manufacturers

1. Dell

B. Dell or approved equivalent

C. Minimum Features and specifications

1. Rack Mounted Chassis

2.4 NETWORK VIDEO RECORDER

A. Acceptable Manufacturers

1. Genetec

B. Genetec or approved equivalent

C. Minimum Features and Specifications

2.5 INTERCOM & PUBLIC ADDRESS SERVER

A. Acceptable Manufacturers

1. 2N

B. Genetec or approved equivalent

C. Minimum Features and Specifications

PART 3 - EXECUTION

3.1 GROUNDING

A. Comply with requirements in Section 270526.10 "Grounding and Bonding for Security Systems" for grounding conductors and connectors.

3.2 OPERATOR WORKSTATION

A. Provide the workstation hardware to Owner for image with operating system and baseline configuration and scan for vulnerabilities.

B. Owner will provide the workstation back to the Contractor for installation and configuration of project specific software and licenses.

3.3 ACCESS CONTROL SERVER

A. Provide the Access Control Server hardware to Owner to image with operating system and baseline configuration and scan for vulnerabilities.

B. Owner will provide the server back to the Contractor for installation and configuration of project specific software and licenses.

3.4 REFER TO 280500.10 FOR ALL OTHER PART III REQUIREMENTS

END OF SECTION

This page is intentionally left blank.

SECTION 28 05 26.10 - GROUNDING AND BONDING FOR ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Grounding conductors.
2. Grounding connectors.
3. Grounding busbars.

1.3 DEFINITIONS

A. Signal Ground: The ground reference point designated by manufacturer of the system that is considered to have zero voltage.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

PART 2 - PRODUCTS

2.1 CONDUCTORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Allied Tube & Conduit; Atkore International.
2. Harger Lightning & Grounding; business of Harger, Inc.
3. Panduit Corp.
4. TE Connectivity Ltd.

B. Comply with UL 486A-486B.

C. Insulated Conductors: Stranded copper wire, green or green with yellow stripe insulation, insulated for 600 V, and complying with UL 83.

1. Ground wire for custom-length equipment ground jumpers shall be No. 6 AWG, 19-strand, UL-listed, Type THHN wire.

D. Bare Copper Conductors:

1. Solid Conductors: ASTM B 3.
2. Stranded Conductors: ASTM B 8.
3. Tinned Conductors: ASTM B 33.

4. Bonding Cable: 28 kcmils (14.2 sq. mm), 14 strands of No. 17 AWG conductor, and 1/4 inch (6.3 mm) in diameter.
5. Bonding Conductor: No. 4 or No. 6 AWG, stranded conductor.

6. Bonding Jumper: Tinned-copper tape, braided conductors terminated with two-hole copper ferrules; 1-5/8 inches (41 mm) wide and 1/16 inch (1.6 mm) thick.

2.2 CONNECTORS

A. Irreversible connectors listed for the purpose. Listed by an NRTL as complying with NFPA 70 for specific types, sizes, and combinations of conductors and other items connected. Comply with UL 486A-486B.
B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
2. Chatsworth Products, Inc.
3. Harger Lightning & Grounding; business of Harger, Inc.
4. Panduit Corp.
5. TE Connectivity Ltd.

C. Compression Wire Connectors: Crimp-and-compress connectors that bond to the conductor when the connector is compressed around the conductor. Comply with UL 467.

1. Electroplated tinned copper, C and H shaped.

D. Busbar Connectors: Cast silicon bronze, solderless **compression** type mechanical connector; with a long barrel and two holes spaced on 5/8- or 1-inch (15.8- or 25.4-mm) centers for a two-bolt connection to the busbar.
E. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

2.3 GROUNDING BUSBARS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Chatsworth Products, Inc.
2. Harger Lightning & Grounding; business of Harger, Inc.
3. Panduit Corp.

B. Grounding Busbars: Predrilled rectangular bars of hard-drawn solid copper, **1/4 by 2 inches** in cross section, length as indicated on Drawings. The busbar shall be for wall mounting, shall be NRTL listed as complying with UL 467, and shall comply with J-STD-607-A.

1. Predrilling shall be with holes for use with lugs specified in this Section.
2. Mounting Hardware: Stand-off brackets that provide at least a 2-inch (50-mm clearance to access the rear of the busbar. Brackets and bolts shall be stainless steel.)
3. Stand-off insulators for mounting shall be Lexan or PVC. Comply with UL 891 for use in 600 V switchboards, impulse tested at 5000 V.

C. Rack and Cabinet Grounding Busbars: Rectangular bars of hard-drawn solid copper, accepting conductors ranging from No. 14 to No. 2/0 AWG, NRTL listed as complying with UL 467, and complying with J-STD-607-A. Predrilling shall be with holes for use with lugs specified in this Section.

1. Cabinet-Mounted Busbar: Terminal block, with stainless-steel or copper-plated hardware for attachment to the cabinet.
2. Rack-Mounted Horizontal Busbar: Designed for mounting in 19- or 23-inch (483- or 584-mm) equipment racks. Include a copper splice bar for transitioning to an adjoining rack, and stainless-steel or copper-plated hardware for attachment to the rack.

3. Rack-Mounted Vertical Busbar: 72 or 36 inches (1827 or 914 mm long, with)stainless-steel or copper-plated hardware for attachment to the rack.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Comply with IEEE 1100, "Recommended Practice for Power and Grounding Electronic Equipment."

1. Ground cable shields, drain conductors, and equipment to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other impairments.
2. Bond shields and drain conductors to ground at only one point in each circuit.

B. Signal Ground:

1. For each system, establish the signal ground and label that location as such.

2. Bond the signal ground to the alternating-current (ac) power system service by connecting to one of the following listed locations, using insulated **No. 6 AWG,** stranded, Type THHN wire:

a. Grounding bar in an electrical power panelboard if located in the same room or space as the signal ground.
b. Telecommunications grounding busbar.

C. Comply with NECA 1.

3.2 APPLICATION

A. Conductors: Install solid conductor for **No. 8** AWG and smaller and stranded conductors for **No. 6** AWG and larger unless otherwise indicated.
B. Grounding and Bonding Conductors:

1. Install in the straightest and shortest route between the origination and termination point, and no longer than required. The bend radius shall not be smaller than eight times the diameter of the conductor. No one bend may exceed 90 degrees.
2. Install without splices.
3. Support at not more than 36-inch (900-mm) intervals.

3.3 CONNECTIONS

A. Stacking of conductors under a single bolt is not permitted when connecting to busbars.
B. Assemble the wire connector to the conductor, complying with manufacturer's written instructions and as follows:

1. Use crimping tool and the die specific to the connector.
2. Pretwist the conductor.
3. Apply an antioxidant compound to all bolted and compression connections.

C. Shielded Cable: Bond the shield of shielded cable to the signal ground. Comply with TIA/EIA-568-B.1 and TIA/EIA-568-B.2 when grounding screened, balanced, twisted-pair cables.
D. Rack- and Cabinet-Mounted Equipment: Bond powered equipment chassis to the cabinet or rack grounding bar. Power connection shall comply with NFPA 70; the equipment grounding conductor in the power cord of cord- and plug-connected equipment shall be considered as a supplement to bonding requirements in this Section.

3.4 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Tests and Inspections:

1. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.

C. Grounding system will be considered defective if it does not pass tests and inspections.
D. Prepare test and inspection reports.

END OF SECTION

SECTION 28 05 28.10 – PATHWAYS FOR ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Metal conduits, tubing, and fittings.
2. Nonmetallic conduits, tubing, and fittings.
3. Optical-fiber-cable pathways and fittings.
4. Metal wireways and auxiliary gutters.
5. Nonmetallic wireways and auxiliary gutters.
6. Surface pathways.
7. Boxes, enclosures, and cabinets.
8. Handholes and boxes for exterior underground cabling.

B. Related Requirements:

1. Section 260543 "Underground Ducts and Raceways for Electrical Systems" for exterior ductbanks, manholes, and underground utility construction.
2. Section 260533 "Raceways and Boxes for Electrical Systems" for conduits, wireways, surface raceways, boxes, enclosures, cabinets, handholes, and faceplate adapters serving electrical systems.
3. Section 270528 "Pathways for Communications Systems" for conduits, surface pathways, innerduct, boxes, and faceplate adapters serving communications systems.

1.3 DEFINITIONS

A. ARC: Aluminum rigid conduit.
B. GRC: Galvanized rigid steel conduit.
C. IMC: Intermediate metal conduit.

1.4 ACTION SUBMITTALS

A. Product Data: For surface pathways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.
B. Shop Drawings: For custom enclosures and cabinets. Include plans, elevations, sections, and attachment details.
C. Samples: For wireways and for each color and texture specified, 12 inches long.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Pathway routing plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of items involved:

1. Structural members in paths of pathway groups with common supports.
2. HVAC and plumbing items and architectural features in paths of conduit groups with common supports.

B. Qualification Data: For professional engineer.

C. Seismic Qualification Certificates: For pathway racks, enclosures, cabinets, and equipment racks and their mounting provisions, including those for internal components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which certification is based and their installation requirements.
4. Detailed description of conduit support devices and interconnections on which certification is based and their installation requirements.

D. Source quality-control reports.

PART 2 - PRODUCTS

2.1 METAL CONDUITS, TUBING, AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. ABB, Electrification Business.
2. AFC Cable Systems; Atkore International.
3. Allied Tube & Conduit; Atkore International.
4. Alpha Wire; brand of Belden, Inc.
5. Anaconda Sealtite; Anamet Electrical, Inc.
6. Electri-Flex Company.
7. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.
8. Picoma; Zekelman Industries.
9. Plasti-Bond; Robroy Industries.
10. Republic Conduit; Nucor Corporation, Nucor Tubular Products.
11. Southwire Company, LLC.
12. Western Tube; Zekelman Industries.
13. Wheatland Tube; Zekelman Industries.

B. General Requirements for Metal Conduits and Fittings:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with TIA-569-B.

C. GRC: Comply with ANSI C80.1 and UL 6.
D. ARC: Comply with ANSI C80.5 and UL 6A.
E. IMC: Comply with ANSI C80.6 and UL 1242.
F. PVC-Coated Steel Conduit: PVC-coated rigid steel conduit

1. Comply with NEMA RN 1.
2. Coating Thickness: 0.040 inch (1 mm), minimum.

G. EMT: Comply with ANSI C80.3 and UL 797.
H. FMC: Comply with UL 1; zinc-coated steel.
I. LFMC: Flexible steel conduit with PVC jacket and complying with UL 360.
J. Fittings for Metal Conduit: Comply with NEMA FB 1 and UL 514B.

1. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 886 and NFPA 70.
2. Fittings for EMT:

a. Material: Steel
b. Type: compression.

3. Expansion Fittings: PVC or steel to match conduit type, complying with UL 467, rated for environmental conditions where installed, and including flexible external bonding jumper.
4. Coating for Fittings for PVC-Coated Conduit: Minimum thickness of 0.040 inch (1 mm), with overlapping sleeves protecting threaded joints.

K. Joint Compound for IMC, GRC, or ARC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.

2.2 NONMETALLIC CONDUITS, TUBING, AND FITTINGS

A. Available Manufacturers meeting the following requirements.
B. General Requirements for Nonmetallic Conduits and Fittings:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with TIA-569-B.

C. ENT: Comply with NEMA TC 13 and UL 1653.
D. RNC: Type EPC-40-PVC, complying with NEMA TC 2 and UL 651 unless otherwise indicated.
E. LFNC: Comply with UL 1660.
F. Rigid HDPE: Comply with UL 651A.
G. Continuous HDPE: Comply with UL 651B.
H. RTRC: Comply with UL 1684A and NEMA TC 14.
I. Fittings for ENT and RNC: Comply with NEMA TC 3; match to conduit or tubing type and material.
J. Fittings for LFNC: Comply with UL 514B.
K. Solvents and Adhesives: As recommended by conduit manufacturer.

2.3 METAL WIREWAYS AND AUXILIARY GUTTERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include.
B. Description: Sheet metal, complying with UL 870 and NEMA 250, Type 12 unless otherwise indicated, and sized according to NFPA 70.

1. Metal wireways installed outdoors shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with TIA-569-B.

C. Fittings and Accessories: Include couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.
D. Wireway Covers: Hinged type unless otherwise indicated.
E. Finish: Manufacturer's standard enamel finish.

2.4 SURFACE PATHWAYS

A. General Requirements for Surface Pathways:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with TIA-569-B.

B. Surface Metal Pathways: Galvanized steel with snap-on covers complying with UL 5. Manufacturer's standard enamel finish in color selected by Architect.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. MonoSystems, Inc.
b. Niedax Inc.
c. Panduit Corp.
d. Wiremold; Legrand North America, LLC.

C. Surface Nonmetallic Pathways: Two- or three-piece construction, complying with UL 5A, and manufactured of rigid PVC with texture and color selected by Architect from manufacturer's standard colors. Product shall comply with UL 94 V-0 requirements for self-extinguishing characteristics.

2.5 BOXES, ENCLOSURES, AND CABINETS

A. General Requirements for Boxes, Enclosures, and Cabinets:

1. Comply with TIA-569-B.
2. Boxes, enclosures and cabinets installed in wet locations shall be listed for use in wet locations.

B. Sheet-Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.
C. Cast-Metal Outlet and Device Boxes: Comply with NEMA FB 1, ferrous alloy, Type FD, with gasketed cover.
D. Box extensions used to accommodate new building finishes shall be of same material as recessed box.
E. Metal Floor Boxes:

1. Material: Cast metal or sheet metal.
2. Type: Fully adjustable.
3. Shape: Rectangular.
4. Listing and Labeling: Metal floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. Nonmetallic Floor Boxes: Nonadjustable, round.

1. Listing and Labeling: Nonmetallic floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

G. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.
H. Cast-Metal Access, Pull, and Junction Boxes: Comply with NEMA FB 1 and UL 1773, cast aluminum with gasketed cover.
I. Device Box Dimensions: 4 inches by 2-1/8 inches by 2-1/8 inches deep.
J. Gangable boxes are prohibited.
K. Nonmetallic Outlet and Device Boxes: Comply with NEMA OS 2 and UL 514C.
L. Hinged-Cover Enclosures: Comply with UL 50 and NEMA 250, Type 12 with continuous-hinge cover with flush latch unless otherwise indicated.

1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
2. Nonmetallic Enclosures:

a. Material: Plastic

3. Interior Panels: Steel; all sides finished with manufacturer's standard enamel.

M. Cabinets:

1. NEMA 250, Type 12, galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.
2. Hinged door in front cover with flush latch and concealed hinge.
3. Key latch to match panelboards.
4. Metal barriers to separate wiring of different systems and voltage.
5. Accessory feet where required for freestanding equipment.
6. Nonmetallic cabinets shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

PART 3 - EXECUTION

3.1 PATHWAY APPLICATION

A. Outdoors: Apply pathway products as specified below unless otherwise indicated:

1. Exposed Conduit: RNC.
2. Concealed Conduit, Aboveground: EMT.
3. Underground Conduit: RNC, Type EPC-40-PVC.
4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.
5. Boxes and Enclosures, Aboveground: NEMA 250, Type 4X.

B. Indoors: Apply pathway products as specified below unless otherwise indicated:

1. Exposed, Not Subject to Physical Damage: EMT
2. Exposed, Not Subject to Severe Physical Damage: EMT
3. Exposed and Subject to Severe Physical Damage: GRC
4. Pathway locations include the following:

    a. Loading dock.
    b. Parking Areas
    c. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
    d. Mechanical rooms.

5. Concealed in Ceilings and Interior Walls and Partitions: EMT
6. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric-Solenoid, or Motor-Driven Equipment): FMC, except use LFMC in damp or wet locations.
7. Damp or Wet Locations: GRC
8. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4 stainless steel in institutional and commercial kitchens and damp or wet locations.

C. Minimum Pathway Size: 3/4-inch trade size.
D. Pathway Fittings: Compatible with pathways and suitable for use and location.

1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings unless otherwise indicated. Comply with NEMA FB 2.10.
2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with this type of conduit. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.
3. EMT: Use compression], steel fittings. Comply with NEMA FB 2.10.

4. Flexible Conduit: Use only fittings listed for use with flexible conduit. Comply with NEMA FB 2.20.

E. Do not install aluminum conduits, boxes, or fittings in contact with concrete or earth.
F. Install surface pathways only where indicated on Drawings.
G. Do not install nonmetallic conduit where ambient temperature exceeds 120 deg F.

3.2 INSTALLATION

A. Comply with NECA 1, NECA 101, and TIA-569-B for installation requirements except where requirements on Drawings or in this article are stricter. Comply with NECA 102 for aluminum pathways. Comply with NFPA 70 limitations for types of pathways allowed in specific occupancies and number of floors.
B. Keep pathways at least 6 inches (150 mm) away from parallel runs of flues and steam or hot-water pipes. Install horizontal pathway runs above water and steam piping.
C. Complete pathway installation before starting conductor installation.
D. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems" for hangers and supports.
E. Arrange stub-ups so curved portions of bends are not visible above finished slab.
F. Install no more than the equivalent of three 90-degree bends in any conduit run except for communications wiring conduits for which only two 90-degree bends are allowed. Support within 12 inches (300 mm) of changes in direction.
G. Conceal conduit and EMT within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.
H. Support conduit within 12 inches (300 mm) of enclosures to which attached.
I. Pathways Embedded in Slabs:

1. Run conduit larger than 1-inch (27-mm) trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support. Secure pathways to reinforcement at maximum 10-foot (3-m) intervals.
2. Arrange pathways to cross building expansion joints at right angles with expansion fittings.
3. Arrange pathways to keep a minimum of 2 inches of concrete cover in all directions.
4. Do not embed threadless fittings in concrete unless specifically approved by Architect for each specific location.
5. Change from ENT to [RNC, Type EPC-40-PVC] [GRC] [or] [IMC] before rising above floor.

J. Stub-ups to Above Recessed Ceilings:

1. Use EMT, IMC, or RMC for pathways.
2. Use a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.

K. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of pathway and fittings before making up joints. Follow compound manufacturer's written instructions.
L. Coat field-cut threads on PVC-coated pathway with a corrosion-preventing conductive compound prior to assembly.
M. Install pathways square to the enclosure and terminate at enclosures with locknuts. Install locknuts hand tight plus 1/4 turn more.
N. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to conduit assembly to assure a continuous ground path.
O. Cut conduit perpendicular to the length. For conduits of 2-inch (53-mm) trade size and larger, use roll cutter or a guide to ensure cut is straight and perpendicular to the length.
P. Install pull wires in empty pathways. Use polypropylene or monofilament plastic line with not less than 200-lb (90-kg) tensile strength. Leave at least 12 inches (300 mm) of slack at each

end of pull wire. Cap underground pathways designated as spare above grade alongside pathways in use.

Q. Surface Pathways:

1. Install surface pathway for surface electrical outlet boxes only where indicated on Drawings.
2. Install surface pathway with a minimum 2-inch (50-mm) radius control at bend points.
3. Secure surface pathway with screws or other anchor-type devices at intervals not exceeding 48 inches (1200 mm) and with no less than two supports per straight pathway section. Support surface pathway according to manufacturer's written instructions. Tape and glue are not acceptable support methods.

R. Install pathway sealing fittings at accessible locations according to NFPA 70 and fill them with listed sealing compound. For concealed pathways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install pathway sealing fittings according to NFPA 70.

S. Install devices to seal pathway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal the interior of all pathways at the following points:

1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
2. Where an underground service pathway enters a building or structure.
3. Where otherwise required by NFPA 70.

T. Comply with manufacturer's written instructions for solvent welding PVC conduit and fittings.

U. Expansion-Joint Fittings:

1. Install in each run of aboveground RNC that is located where environmental temperature change may exceed 30 deg F (17 deg C), and that has straight-run length that exceeds 25 feet (7.6 m). Install in each run of aboveground RMC and EMT conduit that is located where environmental temperature change may exceed 100 deg F (55 deg C) and that has straight-run length that exceeds 100 feet (30 m).
2. Install type and quantity of fittings that accommodate temperature change listed for each of the following locations:

    a. Outdoor Locations Not Exposed to Direct Sunlight: 125 deg F temperature change.
    b. Outdoor Locations Exposed to Direct Sunlight: 155 deg F temperature change.
    c. Indoor Spaces Connected with Outdoors without Physical Separation: 125 deg F temperature change.
    d. Attics: 135 deg F temperature change.

3. Install fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per deg F (0.06 mm per meter of length of straight run per deg C) of temperature change for PVC conduits. Install fitting(s) that provide expansion and contraction for at least 0.000078 inch per foot of length of straight run per deg F (0.0115 mm per meter of length of straight run per deg C) of temperature change for metal conduits.
4. Install expansion fittings at all locations where conduits cross building or structure expansion joints.
5. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.

V. Flexible Conduit Connections: Comply with NEMA RV 3. Use maximum of 72 inches (1830 mm) of flexible conduit for recessed and semirecessed luminaires, equipment subject to vibration, noise transmission, or movement; and for transformers and motors.

1. Use LFMC in damp or wet locations subject to severe physical damage.
2. Use LFMC or LFNC in damp or wet locations not subject to severe physical damage.

W. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to [center] [top] [bottom] of box unless otherwise indicated.
X. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall. Prepare block surface to provide a flat surface for a raintight connection between box and cover plate or supported equipment and box.
Y. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same vertical channel.
Z. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for the purpose.
AA. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.
BB. Set metal floor boxes level and flush with finished floor surface.
CC. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.

3.3 INSTALLATION OF UNDERGROUND CONDUIT

A. Direct-Buried Conduit:

1. Excavate trench bottom to provide firm and uniform support for conduit. Prepare trench bottom as specified in Section 312000 "Earth Moving" for pipe less than 6 inches (150 mm) in nominal diameter.
2. Install backfill as specified in Section 312000 "Earth Moving."
3. After installing conduit, backfill and compact. Start at tie-in point, and work toward end of conduit run, leaving conduit at end of run free to move with expansion and contraction as temperature changes during this process. Firmly hand tamp backfill around conduit to provide maximum supporting strength. After placing controlled backfill to within 12 inches (300 mm) of finished grade, make final conduit connection at end of run and complete backfilling with normal compaction as specified in Section 312000 "Earth Moving."
4. Install manufactured duct elbows for stub-ups at poles and equipment and at building entrances through floor unless otherwise indicated. Encase elbows for stub-up ducts throughout the length of elbow.

    a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches (75 mm) of concrete for a minimum of 12 inches (300 mm) on each side of the coupling..

5. Underground Warning Tape: Comply with requirements in Section 260553 "Identification for Electrical Systems."

3.4 INSTALLATION OF UNDERGROUND HANDHOLES AND BOXES

A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting conduits to minimize bends and deflections required for proper entrances.
B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch (12.5-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.
C. Elevation: In paved areas, set so cover surface will be flush with finished grade. Set covers of other enclosures 1 inch (25 mm) above finished grade.
D. Install handholes with bottom below frost line, Insert depth of frost line below grade at Project site below grade.
E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in enclosure.

F. Field cut openings for conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

3.5 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRONIC SAFETY AND SECURITY PENETRATIONS

A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 260544 "Sleeves and Sleeve Seals for Electronic Safety and Security Pathways and Cabling."

3.6 FIRESTOPPING

A. Install firestopping at penetrations of fire-rated floor and wall assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

3.7 PROTECTION

A. Protect coatings, finishes, and cabinets from damage and deterioration.

1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION

This page is intentionally left blank.

SECTION 28 05 29 - HANGERS AND SUPPORTS FOR SECURITY SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Steel slotted support systems for communication raceways.
2. Aluminum slotted support systems for communication raceways.
3. Nonmetallic slotted support systems for communication raceways.
4. Conduit and cable support devices.
5. Support for conductors in vertical conduit.
6. Structural steel for fabricated supports and restraints.
7. Mounting, anchoring, and attachment components, including powder-actuated fasteners, mechanical expansion anchors, concrete inserts, clamps, through bolts, toggle bolts, and hanger rods.
8. Fabricated metal equipment support assemblies.

B. Related Requirements:

1. Section 270548 "Seismic Controls for Communications Systems" for products and installation requirements necessary for compliance with seismic criteria.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for the following:

a. Slotted support systems, hardware, and accessories.
b. Clamps.
c. Hangers.
d. Sockets.
e. Eye nuts.
f. Fasteners.
g. Anchors.
h. Saddles.
i. Brackets.

2. Include rated capacities and furnished specialties and accessories.

B. Shop Drawings: Signed and sealed by a qualified professional engineer. For fabrication and installation details for communications hangers and support systems.

1. Trapeze hangers. Include product data for components.
2. Steel slotted-channel systems.
3. Aluminum slotted-channel systems.
4. Nonmetallic slotted-channel systems.
5. Equipment supports.

6. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.

C. Delegated-Design Submittal: For hangers and supports for communications systems.

1. Include design calculations and details of trapeze hangers.
2. Include design calculations for seismic restraints.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plan(s) and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Suspended ceiling components.
2. Ductwork, piping, fittings, and supports.
3. Structural members to which hangers and supports will be attached.
4. Size and location of initial access modules for acoustical tile.
5. Items penetrating finished ceiling, including the following:

a. Luminaires.
b. Air outlets and inlets.
c. Speakers.
d. Sprinklers.
e. Access panels.
f. Projectors.
g. Telecom Outlets.

B. Seismic Qualification Data: Certificates, for hangers and supports for communications equipment and systems, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Welding certificates.

1.5 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M] [AWS D1.2/D1.2M].
B. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M.
2. AWS D1.2/D1.2M.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design hanger and support system.

B. Seismic Performance: Hangers and supports shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the supported equipment and systems will remain in place without separation of any parts when subjected to the seismic forces specified and the system will be fully operational after the seismic event."
2. Component Importance Factor: 1.5

C. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame Rating: Class 1.
2. Self-extinguishing according to ASTM D635.

2.2 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

A. Steel Slotted Support Systems: Preformed steel channels and angles with minimum 13/32-inch- (10-mm-) diameter holes at a maximum of 8 inches (200 mm) o.c. in at least one surface.

1. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
2. Material for Channel, Fittings, and Accessories: Galvanized steel.
3. Channel Width: Selected for applicable load criteria
4. One of the Following Finishes;

    a. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.
    b. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
    c. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.

5. Channel Dimensions: Selected for applicable load criteria.

B. Aluminum Slotted Support Systems: Extruded aluminum channels and angles with minimum 13/32-inch- (10-mm-) diameter holes at a maximum of 8 inches (200 mm) o.c. in at least one surface.

1. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
2. Channel Material: 6063-T6 aluminum alloy.
3. Fittings and Accessories Material: 5052-H32 aluminum alloy.
4. Channel Width: Selected for applicable load criteria.
5. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
6. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
7. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
8. Channel Dimensions: Selected for applicable load criteria.

C. Nonmetallic Slotted Support Systems: Structural-grade, factory-formed, glass-fiber-resin channels and angles with minimum 13/32-inch- (10-mm-) diameter holes at a maximum of 8 inches (200 mm) o.c., in at least one surface.

1. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
2. Channel Width: Selected for applicable load criteria
3. Fittings and Accessories: Products provided by channel and angle manufacturer and designed for use with those items.

4. Fitting and Accessory Materials: Same as those for channels and angles, except metal items may be stainless steel.
5. Rated Strength: Selected to suit applicable load criteria.
6. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

D. Conduit and Cable Support Devices: Steel and malleable-iron clamps, hangers, and associated fittings, designed for types and sizes of raceway or cable to be supported.
E. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for nonarmored communications conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be made of malleable iron.
F. Structural Steel for Fabricated Supports and Restraints: ASTM A36/A36M steel plates, shapes, and bars; black and galvanized.
G. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:

1. Powder-Actuated Fasteners: Threaded-steel stud for use in hardened portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.
2. Mechanical-Expansion Anchors: Insert-wedge-type zinc-coated steel for use in hardened portland cement concrete, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.
3. Concrete Inserts: Steel or malleable-iron, slotted support system units are similar to MSS Type 18 units and comply with MFMA-4 or MSS SP-58.
4. Clamps for Attachment to Steel Structural Elements: MSS SP-58 units are suitable for attached structural element.
5. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM F3125/F3125M,Grade A325 (Grade A325M).
6. Toggle Bolts: All-steel springhead type.
7. Hanger Rods: Threaded steel.

2.3 FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

A. Description: Welded or bolted structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.
B. Materials: Comply with requirements in Section 055000 "Metal Fabrications" for steel shapes and plates.

PART 3 - EXECUTION

3.1 APPLICATION

A. Comply with the following standards for application and installation requirements of hangers and supports, except where requirements on Drawings or in this Section are stricter:

1. NECA 1.
2. NECA/BICSI 568.
3. TIA-569-D.
4. NECA 101.
5. NECA 105.

B. Comply with requirements in Section 078413 "Penetration Firestopping" for firestopping materials and installation for penetrations through fire-rated walls, ceilings, and assemblies.
C. Comply with requirements for pathways specified in Section 270528 "Pathways for Communications Systems."

D. Maximum Support Spacing and Minimum Hanger Rod Size for Raceway: Space supports for EMTs, IMCs, and RMCs as scheduled in NECA 1, where its Table 1 lists maximum spacings that are less than those stated in NFPA 70. Minimum rod size shall be 1/4 inch (6 mm) in diameter.

E. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted or other support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.

1. Secure raceways and cables to these supports with two-bolt conduit clamps.

F. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2-inch (38-mm) and smaller raceways serving branch circuits and communication systems above suspended ceilings and for fastening raceways to trapeze supports.

3.2 SUPPORT INSTALLATION

A. Raceway Support Methods: In addition to methods described in NECA 1, EMT may be supported by openings through structure members, according to NFPA 70.

B. Strength of Support Assemblies: Where not indicated, select sizes of components, so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb (90 kg).

C. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten communications items and their supports to building structural elements by the following methods unless otherwise indicated by code:

1. To Wood: Fasten with lag screws or through bolts.
2. To New Concrete: Bolt to concrete inserts.
3. To Masonry: Use approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
4. To Existing Concrete: Use expansion anchor fasteners.
5. Instead of expansion anchors, powder-actuated-driven threaded studs, provided with lock washers and nuts, may be used in existing standard-weight concrete 4 inches (100 mm) thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inches (100 mm) thick.
6. To Steel: Beam clamps (MSS SP-58, Type 19, 21, 23, 25, or 27), complying with MSS SP-69Spring-tension clamps.
7. To Light Steel: Sheet metal screws.
8. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate by means that comply with seismic-restraint strength and anchorage requirements.

D. Drill holes for expansion anchors in concrete at locations and to depths that avoid the need for reinforcing bars.

3.3 INSTALLATION OF FABRICATED METAL SUPPORTS

A. Comply with installation requirements in Section 055000 "Metal Fabrications" for site-fabricated metal supports.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor communications materials and equipment.

C. Field Welding: Comply with AWS D1.1/D1.1M.

3.4 PAINTING

A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils (0.05 mm).

B. Touchup: Comply with requirements in painting Sections for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.

C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas, and apply galvanizing-repair paint to comply with ASTM A780.

END OF SECTION

SECTION 28 05 31.10- COMMUNICATIONS EQUIPMENT FOR ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 SYSTEM DESCRIPTION

A. This specification is for the communications equipment directly supporting the electronic security systems (ESS).

1.2 SUMMARY

A. This Section includes the following:

1. Network Switches
2. Fiber Switches

1.3 REFER TO 280500.10 FOR ALL OTHER PART I REQUIREMENTS

PART 2 - PRODUCTS

2.1 NETWORK SWITCH

A. Acceptable Manufacturers

1. Juniper
2. Approved Equals

B. EX4300-48P – switch

C. EX-UM-4X4SFP – SFP uplink module

D. JPSU-1100-AC-AFO – power supply for switch

E. EX-SFP-1GE-SX- SFP

F. CBL-PWR-C15M-HITEMP - power cord

2.2 FIELD ENCLOSURE

A. Hardened Network Switch

1. Comnet Environmentally Hardened Layer 2 Switch with 2 SFP/4 Electrical Posts with POE Power
2. Model: CHGE2FE4SMSPOEHO
3. Provide Required SFP Modules for both IDF and Field Side connections.

B. Hardened RS485 Transceiver

1. Comnet Environmentally Hardened RS 485 Transceiver
2. Model: FDX2HSDEA-M (INCLUDE FDX2HSDE B-M AT TELECOM CLOSET side)

C. Power Supply

1. Comnet Power Supplies, Hardwired
2. PS48VDC-5A, Model: PS-DRA240-48A, AND
3. PS24VDC-0.72A, Model: PSAMR1-24: 1.35 / 0.72
4. Din Rail: 35 MM

PART 3 - EXECUTION

3.1 GROUNDING

A. Comply with requirements in Section 270526.10 "Grounding and Bonding for Security Systems" for grounding conductors and connectors.

3.2 IP ADDRESSING

A. Refer to 280500.10 Submittals for requirements.

3.3 REFER TO 280500.10 FOR ALL OTHER PART III REQUIREMENTS

END OF SECTION

SECTION 28 05 43 - UNDERGROUND PATHWAYS FOR SECURITY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Metal conduit and fittings, including GRC and PVC-coated GRC.
2. Rigid nonmetallic duct.
3. Flexible nonmetallic duct.
4. Duct accessories, including rigid innerduct and fabric innerduct.
5. Precast concrete handholes.
6. Polymer concrete handholes and boxes with polymer concrete cover.
7. Fiberglass handholes and boxes with polymer concrete cover.
8. Fiberglass handholes and boxes.
9. High density plastic boxes.
10. Utility structure accessories.

1.2 DEFINITIONS

A. Direct-Buried: Duct or a duct bank that is buried in the ground, without any additional casing materials, such as concrete.

B. Duct: A single duct or multiple ducts. Duct may be either installed singly or as component of a duct bank.

C. Duct Bank:

1. Two or more ducts installed in parallel, with or without additional casing materials.
2. Multiple duct banks.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Precast or Factory-Fabricated Underground Utility Structures:

a. Include plans, elevations, sections, details, attachments to other work, and accessories.
b. Include duct entry provisions, including location and duct size.
c. Include reinforcement details.
d. Include frame and cover design and manhole chimneys.
e. Include [ladder] [step] details.
f. Include grounding details.
g. Include dimensioned locations of cable rack inserts, pulling-in and lifting irons, and sumps.
h. Include joint details.

2. Factory-Fabricated Handholes and Boxes Other Than Precast Concrete:

    a. Include dimensioned plans, sections, and elevations, and fabrication and installation details.
    b. Include duct entry provisions, including location and duct size.
    c. Include cover design.
    d. Include grounding details.
    e. Include dimensioned locations of cable rack inserts, and pulling-in and lifting irons.

1.4 INFORMATIONAL SUBMITTALS

A. Duct and Duct-Bank Coordination Drawings: Show duct profiles and coordination with other utilities and underground structures.

1. Drawings shall be signed and sealed by a qualified professional engineer.

B. Product Certificates: For concrete and steel used in precast concrete handholes, as required by ASTM C 858.

C. Qualification Data: For professional engineer and testing agency responsible for testing nonconcrete handholes and boxes.

D. Source quality-control reports.

E. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

PART 2 - PRODUCTS

2.1 RIGID NONMETALLIC DUCT

A. Underground Plastic Utilities Duct: Type EPC-80-PVC RNC, complying with NEMA TC 2 and UL 651, with matching fittings complying with NEMA TC 3 by same manufacturer as duct.

B. General Requirements for Nonmetallic Ducts and Fittings:

1. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.
2. Comply with TIA-569-C and TIA-758-C.

C. Solvents and Adhesives: As recommended by duct manufacturer.

2.2 FLEXIBLE NONMETALLIC DUCT

A. HDPE Duct: Type EPEC 80-HDPE complying with NEMA TC 7 and UL 651A.

B. General Requirements for HDPE Duct

1. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.
2. Comply with TIA-569-C and TIA-758-C.

2.3 DUCT ACCESSORIES

A. Fabric Innerduct: Continuous, polyester, multi -pocket fabric innerduct, with internal pull tape and tracer wire.

B. Underground-Line Warning Tape: Underground-line warning tape specified in Section 270553 "Identification for Communications Systems."

2.4 PRECAST CONCRETE HANDHOLES AND BOXES

A. Description: Monolithically poured, factory-fabricated, reinforced-concrete walls and bottom unless open-bottom enclosures are indicated. Frame and cover shall form top of enclosure and shall have load rating consistent with that of handhole or box.

B. Comply with ASTM C 858 for design and manufacturing processes.

C. Frame and Cover: Weatherproof cast-iron frame, with cast-iron cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.

D. Frame and Cover: Weatherproof steel frame, with steel cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.

E. Frame and Cover: Weatherproof steel frame, with hinged steel access door assembly with tamper-resistant, captive, cover-securing bolts.

1. Cover Hinges: Concealed, with hold-open ratchet assembly.
2. Cover Handle: Recessed.

F. Frame and Cover: Weatherproof aluminum frame, with hinged aluminum access door assembly with tamper-resistant, captive, cover-securing bolts.

1. Cover Hinges: Concealed, with hold-open ratchet assembly.
2. Cover Handle: Recessed.

G. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.

H. Cover Legend: Molded lettering, “COMM."

I. Configuration: Units shall be designed for flush burial and have open bottom unless otherwise indicated.

J. Extensions and Slabs: Designed to mate with bottom of enclosure, and made of same material as enclosure.

1. Extension shall provide increased depth of 12 inches (300 mm)
2. Slab: Same dimensions as bottom of enclosure, and arranged to provide closure.

K. Joint Sealant: Asphaltic-butyl material with adhesion, cohesion, flexibility, and durability properties necessary to withstand maximum hydrostatic pressures at the installation location with the ground-water level at grade.

L. Knockout Panels: Precast openings in walls, arranged to match dimensions and elevations of approaching duct and duct banks, plus an additional 6 inches (150 mm vertically and horizontally to accommodate alignment variations.

1. Knockout panels shall be located no less than 6 inches (150 mm) from interior surfaces of walls, floors, or frames and covers of handholes, but close enough to corners to facilitate racking of cables on walls.
2. Knockout panel opening shall have cast-in-place, welded-wire fabric reinforcement for field cutting and bending to tie in to concrete envelopes of duct banks.
3. Knockout panel openings shall be framed with at least two additional No. 3 steel reinforcing bars in concrete around each opening.
4. Knockout panels shall be 1-1/2 to 2 inches (38 to 50 mm) thick.

M. Duct Entrances in Handhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.

1. Type and size shall match fittings to duct or conduit to be terminated.
2. Fittings shall align with elevations of approaching duct and be located near interior corners of handholes to facilitate racking of cable.

N. Handholes 12 inches wide by 24 inches long (300 mm wide by 600 mm long) and larger shall have inserts for cable racks and pulling-in irons installed before concrete is poured.

PART 3 - EXECUTION

3.1 PREPARATION

A. Coordinate layout and installation of duct, duct bank, manholes, handholes, and boxes with final arrangement of other utilities, site grading, and surface features as determined in the field. Notify Architect if there is a conflict between areas of excavation and existing structures or archaeological sites to remain.

B. Coordinate elevations of duct and duct-bank entrances into manholes, handholes, and boxes with final locations and profiles of duct and duct banks, as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations as required to suit field conditions and to ensure that duct runs drain to manholes and handholes, and as approved by Architect.

3.2 UNDERGROUND DUCT APPLICATION

A. Duct for Communications: Type EPC-80-PVC RNC, in direct-buried duct bank unless otherwise indicated.

B. Duct for Communications: Type EPEC-80-HDPE duct in direct-bored duct bank unless otherwise indicated.

C. Underground Duct Crossing Paved Paths, Walks and Driveways: Type EPC-40-PVC RNC, encased in reinforced concrete.

D. Stub-Ups for Communications: Concrete-encased RNC.

3.3 UNDERGROUND ENCLOSURE APPLICATION

A. Handholes and Boxes for Communications:

1. Units in Roadways and Other Deliberate Traffic Paths: Precast concrete. AASHTO HB 17, H-10 structural load rating.
2. Units in Driveway, Parking Lot, and Off-Roadway Locations, Subject to Occasional, Nondeliberate Loading by Heavy Vehicles: Precast concrete, AASHTO HB 17, H-20 Polymer concrete, SCTE 77, Tier 15 structural load rating.
3. Units in Sidewalk and Similar Applications with a Safety Factor for Nondeliberate Loading by Vehicles: Precast concrete, AASHTO HB 17, H-5, Polymer concrete units, SCTE 77, Tier 8 structural load rating.
4. Units Subject to Light-Duty Pedestrian Traffic Only: Fiberglass-reinforced polyester resin, structurally tested according to SCTE 77 with 3000-lbf (13 345-N) vertical loading.
5. Cover design load shall not exceed the design load of the handhole or box.

B. Manholes: Precast concrete.

1. Units Located in Roadways and Other Deliberate Traffic Paths by Heavy or Medium Vehicles: H-20 structural load rating according to AASHTO HB 17.
2. Units Not Located in Deliberate Traffic Paths by Heavy or Medium Vehicles: H-10 load rating according to AASHTO HB 17.

3.4 EARTHWORK

A. Excavation and Backfill: Comply with Section 312000 "Earth Moving," but do not use heavy-duty, hydraulic-operated, compaction equipment.

B. Restoration: Replace area immediately after backfilling is completed.

C. Restore surface features at areas disturbed by excavation, and re-establish original grades unless otherwise indicated.

D. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Section 329200 "Turf and Grasses" and Section 329300 "Plants."

E. Cut and patch existing pavement in the path of underground duct, duct bank, and utility structures according to the "Cutting and Patching" Article in Section 017300 "Execution."

3.5 DUCT AND DUCT-BANK INSTALLATION

A. Where indicated on Drawings, install duct, spacers, and accessories into the duct configuration shown. Duct installation requirements in this Section also apply to duct bank.

B. Install duct and duct bank according to NEMA TCB 2 and TIA-758-C.

C. Slope: Pitch duct and duct bank a minimum slope of 1:100 down toward manholes and handholes and away from buildings and equipment. Slope duct and duct bank from a high point in runs between two manholes, to drain in both directions.

D. Curves and Bends: Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with a minimum radius of 48 inches (1200 mm) both horizontally and vertically, at other locations unless otherwise indicated.

1. Duct and duct banks shall have maximum of two 90-degree bends, or the total of all bends shall be no more 180 degrees between pull points.

E. Joints: Use solvent-cemented joints in duct and fittings, and make watertight according to manufacturer's written instructions. Stagger couplings, so those of adjacent ducts do not lie in same plane.

F. Installation Adjacent to High-Temperature Steam Lines: Where duct or duct banks are installed parallel to underground steam lines, perform calculations showing the duct or duct bank will not be subject to environmental temperatures above 40 deg C. Where environmental temperatures are calculated to rise above 40 deg C, and anywhere the duct or duct bank crosses above an underground steam line, install insulation blankets listed for direct burial to isolate the duct bank from the steam line.

G. End-Bell Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 6 inches (150 mm) o.c. for 4-inch (100-mm) duct, and vary proportionately for other duct sizes.

H. Terminator Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use manufactured, cast-in-place duct terminators, with entrances into structure spaced approximately 6 inches (150 mm) o.c. for 4-inch (100-mm) duct, and vary proportionately for other duct sizes.

I. Building Wall Penetrations: Make a transition from underground duct to GRC at least 10 feet (3 m) outside the building wall, without reducing duct slope away from the building or forming a trap in the duct. Use fittings manufactured for RNC duct-to-GRC conduit transition. Install GRC penetrations of building walls as specified in Section 270544 "Sleeves and Sleeve Seals for Communications Pathways and Cabling."

J. Sealing: Provide temporary closure at terminations of duct that has cables pulled. Seal spare ducts at terminations. Use sealing compound and plugs to withstand at least 15-psig (1.03-MPa) hydrostatic pressure.

K. Innerduct: Install immediately after mandreling duct. Size and type as indicated on Drawings.

L. Pulling Cord: Install 200-lbf- (1000-N-m) test nylon cord in empty duct [and innerduct].

M. Concrete-Encased Duct and Duct Bank:

1. Excavate trench bottom to provide firm and uniform support for duct or duct bank. Prepare trench bottoms as specified in Section 312000 "Earth Moving" for pipes less than 6 inches (150 mm) in nominal diameter.
2. Width: Excavate trench 12 inches (300 mm) wider than duct or duct bank on each side.
3. Width: Excavate trench 3 inches (75 mm) wider than duct or duct bank on each side.
4. Depth: Install top of duct and duct bank at least 24 inches (600 mm) below finished grade in areas not subject to deliberate traffic, and at least 30 inches (750 mm) below finished grade in deliberate traffic paths for vehicles unless otherwise indicated.
5. Support duct and duct bank on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.

6. Minimum Space Between Duct: 3 inches (75 mm) between edge of duct and exterior envelope wall, 2 inches (50 mm) between ducts for like services, and 4 inches (100 mm) between power and communications ducts.
7. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than [four] [five] spacers per 20 feet (6 m) of duct. Place spacers within 24 inches (600 mm) of duct ends. Stagger spacers approximately 6 inches (150 mm) between tiers. Secure spacers to earth and duct to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around duct or duct bank.
8. Elbows: Use manufactured duct elbows for stub-ups, at building entrances, and at changes of direction in duct run unless otherwise indicated. Extend concrete encasement throughout length of elbow.
9. Elbows: Use manufactured GRC elbows for stub-ups, at building entrances, and at changes of direction in duct run.
10. Reinforcement: Reinforce concrete-encased duct and duct bank where they cross disturbed earth and where indicated. Arrange reinforcing rods and ties without forming conductive or magnetic loops around ducts or duct groups.
11. Forms: Use trench walls to form side walls of duct and duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.
12. Concrete Cover: Install a minimum of 3 inches (75 mm) of concrete cover between edge of duct to exterior envelope wall, 2 inches (50 mm) between ducts, and 4 inches (100 mm) between power and communications duct.
13. Concreting Sequence: Pour each run of envelope between manholes or other terminations in one continuous operation.
14. Pouring Concrete: Comply with requirements in "Concrete Placement" Article in Section 033000 "Cast-in-Place Concrete." Place concrete carefully during pours to prevent voids under and between ducts and at exterior surface of envelope. Do not allow a heavy mass of concrete to fall directly onto duct. Allow concrete to flow to center of bank and rise up in middle, uniformly filling all open spaces. Do not use power-driven agitating equipment unless specifically designed for duct-bank application.

N. Direct-Buried Duct and Duct Banks:

1. Excavate trench bottom to provide firm and uniform support for duct and duct bank. Comply with requirements in Section 312000 "Earth Moving" for preparation of trench bottoms for duct less than 6 inches (150 mm) in nominal diameter.
2. Install duct with a minimum of 3 inches (75 mm) between duct for like services and 6 inches (150 mm) between power and signal duct.
3. Width: Excavate trench 12 inches (300 mm) wider than duct or duct bank on each side.
4. Width: Excavate trench 3 inches (75 mm) wider than duct or duct bank on each side.
5. Depth: Install top of duct or duct bank at least 36 inches (900 mm) below finished grade unless otherwise indicated.
6. Set elevation of bottom of duct or duct bank below frost line.
7. Support duct on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.
8. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than [four] [five] spacers per 20 feet (6 m) of duct. Place spacers within 24 inches (600 mm) of duct ends. Stagger spacers approximately 6 inches (150 mm) between tiers. Secure spacers to earth and duct to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around duct or duct bank.
9. Elbows: Install manufactured duct elbows for stub-ups, at building entrances through floor, and at changes of direction in duct unless otherwise indicated. Encase elbows for stub-ups throughout length of elbow. [Extend encasement minimum of 36 inches (900 mm) beyond elbow joints].

10. After installing first tier of duct, backfill and compact. Start at tie-in point and work toward end of duct run, leaving duct at end of run free to move with expansion and contraction, as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand place backfill to 4 inches (100 mm) over duct and hand tamp. Firmly tamp backfill around duct to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end of run and complete backfilling with normal compaction. Comply with requirements in Section 312000 "Earth Moving" for installation of backfill materials.

O. Underground-Line Warning Tape: Bury [nonconducting] [conducting] underground-line warning tape specified in Section 270553 "Identification for Communication Systems" no less than 12 inches (300 mm) above all concrete-encased duct and duct bank [and approximately 12 inches (300 mm) below grade]. Align tape parallel to and within 3 inches (75 mm) of centerline of duct bank. Provide an additional warning tape for each 12-inch (300-mm) increment of duct-bank width over a nominal 18 inches (450 mm). Space additional tapes 12 inches (300 mm) apart, horizontally.

3.6 INSTALLATION OF CONCRETE MANHOLES, HANDHOLES, AND BOXES

A. Precast Concrete Handhole and Manhole Installation:

1. Comply with ASTM C 891 unless otherwise indicated.
2. Install units level and plumb and with orientation and depth coordinated with connecting duct, to minimize bends and deflections required for proper entrances.
3. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1-inch (25-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.

B. Elevations:

1. Manhole Roof: Install with rooftop at least 15 inches (380 mm) below finished grade.
2. Manhole Frame: In paved areas and trafficways, set frames flush with finished grade. Set other manhole frames 1 inch (25 mm) above finished grade.
3. Install handholes with bottom below frost line, <Insert depth of frost line below grade at Project site> below grade.
4. Handhole Covers: In paved areas and trafficways, set surface flush with finished grade. Set covers of other handholes 1 inch (25 mm) above finished grade.
5. Where indicated, cast handhole cover frame integrally with handhole structure.

C. Drainage: Install drains in bottom of manholes where indicated. Coordinate with drainage provisions indicated.

D. Manhole Access: Circular opening in manhole roof; sized to match cover size.

1. Manholes with Fixed Ladders: Offset access opening from manhole centerlines to align with ladder.
2. Install chimney, constructed of precast concrete collars and rings, to support cast-iron frame to connect cover with manhole roof opening. Provide moisture-tight masonry joints and waterproof grouting for frame to chimney.

E. Waterproofing: Apply waterproofing to exterior surfaces of manholes[and handholes] after concrete has cured at least three days. Waterproofing materials and installation are specified in [Section 071353 "Elastomeric Sheet Waterproofing."] [Section 071354 "Thermoplastic Sheet Waterproofing."] <Insert waterproofing Section>. After duct has been connected and grouted,

and before backfilling, waterproof joints and connections, and touch up abrasions and scars. Waterproof exterior of manhole chimneys after mortar has cured at least three days.

F. Dampproofing: Apply dampproofing to exterior surfaces of manholes[and handholes] after concrete has cured at least three days. Dampproofing materials and installation are specified in Section 071113 "Bituminous Dampproofing." After duct has been connected and grouted, and before backfilling, dampproof joints and connections, and touch up abrasions and scars. Dampproof exterior of manhole chimneys after mortar has cured at least three days.

G. Hardware: Install removable hardware, including pulling eyes, cable stanchions, [and]cable arms, [and insulators,]as required for installation and support of cables and conductors and as indicated.

H. Fixed Manhole Ladders: Arrange to provide for safe entry with maximum clearance from cables and other items in manholes.

I. Field-Installed Bolting Anchors in Manholes and Concrete Handholes: Do not drill deeper than 3-7/8 inches (97 mm) for manholes and 2 inches (50 mm) for handholes, for field-installed anchor bolts installed. Use a minimum of two anchors for each cable stanchion.

3.7 GROUNDING

A. Ground underground duct, duct bank, and utility structures according to Section 270526 "Grounding and Bonding for Communications Systems."

3.8 FIELD QUALITY CONTROL

A. Perform the following tests and inspections and prepare test reports:

1. Demonstrate capability and compliance with requirements on completion of installation of underground duct, duct bank, and utility structures.
2. Pull solid aluminum or wood test mandrel through duct to prove joint integrity and adequate bend radii, and test for out-of-round duct. Provide a minimum 12-inch- (300-mm-) long mandrel equal to duct size minus 1/4 inch (6 mm). If obstructions are indicated, remove obstructions and retest.
3. Test manhole[and handhole] grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Section 270526 "Grounding and Bonding for Communications Systems."

B. Correct deficiencies and retest as specified above to demonstrate compliance.

3.9 CLEANING

A. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of duct until duct cleaner indicates that duct is clear of dirt and debris.

B. Clean internal surfaces of manholes, including sump.

1. Sweep floor, removing dirt and debris.
2. Remove foreign material.

END OF SECTION 27 05 43

SECTION 28 05 44 - SLEEVES AND SLEEVE SEALS FOR ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Sleeves for pathway and cable penetration of non-fire-rated construction walls and floors.
2. Sleeve-seal systems.
3. Sleeve-seal fittings.
4. Grout.
5. Silicone sealants.

B. Related Requirements:

1. Section 078413 "Penetration Firestopping" for penetration firestopping installed in fire-resistance-rated walls, horizontal assemblies, and smoke barriers, with and without penetrating items.
2. penetration firestopping installed in fire-resistance-rated walls, horizontal assemblies, and smoke barriers, with and without penetrating items.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

PART 2 - PRODUCTS

2.1 SLEEVES

A. Wall Sleeves:

1. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, plain ends.
2. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.

B. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies: Galvanized-steel sheet; 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint, with tabs for screw-fastening the sleeve to the board.

C. PVC-Pipe Sleeves: ASTM D 1785, Schedule 40.
D. Molded-PVC Sleeves: With nailing flange for attaching to wooden forms.
E. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.
F. Sleeves for Rectangular Openings:

1. Material: Galvanized-steel sheet.
2. Minimum Metal Thickness:

a. For sleeve cross-section rectangle perimeter less than 50 inches (1270 mm) and with no side larger than 16 inches (400 mm), thickness shall be 0.052 inch (1.3 mm).
b. For sleeve cross-section rectangle perimeter 50 inches (1270 mm) or more and one or more sides larger than 16 inches (400 mm), thickness shall be 0.138 inch (3.5 mm).

2.2 SLEEVE-SEAL SYSTEMS

A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and pathway or cable.

1. Sealing Elements: EPDM rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
2. Pressure Plates: Stainless steel
3. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements.

2.3 SLEEVE-SEAL FITTINGS

A. Description: Manufactured plastic, sleeve-type, waterstop assembly made for embedding in concrete slab or wall. Unit shall have plastic or rubber waterstop collar with center opening to match piping OD.

2.4 GROUT

A. Description: Nonshrink; recommended for interior and exterior sealing openings in non-fire-rated walls or floors.
B. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
C. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
D. Packaging: Premixed and factory packaged.

2.5 SILICONE SEALANTS

A. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below.

1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces that are not fire rated.

B. Silicone Foams: Multicomponent, silicone-based, liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION FOR NON-FIRE-RATED ELECTRICAL PENETRATIONS

A. Comply with NECA 1.
B. Comply with NEMA VE 2 for cable tray and cable penetrations.
C. Sleeves for Conduits Penetrating Above-Grade Non-Fire-Rated Concrete and Masonry-Unit Floors and Walls:

1. Interior Penetrations of Non-Fire-Rated Walls and Floors:

a. Seal annular space between sleeve and pathway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Section 079200 "Joint Sealants."
b. Seal space outside of sleeves with mortar or grout. Pack sealing material solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect material while curing.

2. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
3. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and pathway or cable unless sleeve seal is to be installed or unless seismic criteria require different clearance.
4. Install sleeves for wall penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of walls. Cut sleeves to length for mounting flush with both surfaces of walls. Deburr after cutting.

5. Install sleeves for floor penetrations. Extend sleeves installed in floors 2 inches above finished floor level. Install sleeves during erection of floors.

D. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies:

1. Use circular metal sleeves unless penetration arrangement requires rectangular sleeved opening.
2. Seal space outside of sleeves with approved joint compound for gypsum board assemblies.

E. Roof-Penetration Sleeves: Seal penetration of individual pathways and cables with flexible boot-type flashing units applied in coordination with roofing work.
F. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
G. Underground, Exterior-Wall and Floor Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch (25-mm) annular clear space between pathway or cable and sleeve for installing sleeve-seal system.

3.2 SLEEVE-SEAL-SYSTEM INSTALLATION

A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at pathway entries into building.
B. Install type and number of sealing elements recommended by manufacturer for pathway or cable material and size. Position pathway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pathway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.3 SLEEVE-SEAL-FITTING INSTALLATION

A. Install sleeve-seal fittings in new walls and slabs as they are constructed.
B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.
C. Secure nailing flanges to concrete forms.
D. Using grout, seal the space around outside of sleeve-seal fittings.

SECTION 28 08 00.10 - COMMISSIONING OF ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 SYSTEM DESCRIPTION

A. This specification is for the commissioning of electronic security systems (ESS).

1.2 SUMMARY

A. This Section includes the following:

1. Commissioning of the Electronic Security Systems

1.3 REFER TO 280500.10 FOR ALL OTHER PART I REQUIREMENTS

PART 2 - PRODUCTS

2.1 THERE ARE NO PRODUCTS IN THIS SPECIFICATION

PART 3 - EXECUTION

3.1 PERFORMANCE REQUIREMENTS

A. General

1. Refer to Project Process Diagram (PPD) in 280500.10. Utilize the PPD to develop effective and timely project schedules and submissions to ensure project is substantially complete prior to occupancy.

3.2 CONTRACTOR'S FIELD TESTING

A. Perform the Contractor Field Test (CFT) of all devices utilizing Contracting representative provided forms.

B. Submit test results, including journal logs from Genetec, to COTR and Contracting representative.

3.3 PERFORMANCE VERIFICATION TEST (PVT)

A. Based on the approval of the Contractor's Field Test, the COTR will schedule the PVT with the Contractor and Contracting Representative.

B. Contracting representative will witness the Contractor conduct the PVT of all devices utilizing the same form as for the CFT.

C. Contracting representative reserves the right to stop and abort testing as soon as 10 technical deficiencies are found requiring correction.

1. If the acceptance test is aborted, the re-test will commence from the beginning with a retest of components previously tested and accepted.
2. The Contractor is responsible for all time, travel, and lodging expenses incurred for personnel required to be present for resumption of the PVT.

D. The PVT also includes a physical inspection of the installation quality and workmanship.

E. Submit test results, including journal logs from Genetec, to COTR and Contracting representative.

3.4 REFER TO 280500.10 FOR ALL OTHER PART III REQUIREMENTS

END OF SECTION

SECTION 28 11 16 - SECURITY RACKS, FRAMES, AND ENCLOSURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. 19-inch equipment racks.
2. 19-inch freestanding and wall-mounted equipment cabinets.
3. Power strips.
4. Grounding.
5. Labeling.

B. Related Requirements:

1. Section 271110 "Communications Equipment Room Fittings" for backboards and accessories.
2. Section 270526 "Grounding and Bonding for Telecommunications Equipment" for TMGBs and TGBs.
3. Section 270536 "Cable Trays for Communications Systems" for cable trays and cable tray accessories.
4. Section 271313 "Communications Copper Backbone Cabling" for copper data cabling associated with system panels and devices.
5. Section 271323 "Communications Optical Fiber Backbone Cabling" for optical-fiber data cabling associated with system panels and devices.
6. Section 271333 "Communications Coaxial Backbone Cabling" for coaxial data cabling associated with system panels and devices.
7. Section 271513 "Communications Copper Horizontal Cabling" for copper data cabling associated with system panels and devices.
8. Section 271523 "Communications Optical Fiber Horizontal Cabling" for optical-fiber data cabling associated with system panels and devices.
9. Section 271533 "Communications Coaxial Horizontal Cabling" for coaxial data cabling associated with system panels and devices.
10. Section 271611 "Communications Hybrid Cabling" for combined copper and optical fiber data cables associated with system panels and devices.

1.3 DEFINITIONS

A. Access Provider: An operator that provides a circuit path or facility between the service provider and user. An access provider can also be a service provider.

B. BICSI: Building Industry Consulting Service International.

C. LAN: Local area network.

D. RCDD: Registered communications distribution designer.

E. Service Provider: The operator of a telecommunications transmission service delivered through access provider facilities.

F. TGB: Telecommunications grounding bus bar.

G. TMGB: Telecommunications main grounding bus bar.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for equipment racks and cabinets.

2. Include rated capacities, operating characteristics, electrical characteristics, certifications, standards compliance, and furnished specialties and accessories.

B. Shop Drawings: For communications racks, frames, and enclosures. Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

2. Equipment Racks and Cabinets: Include workspace requirements and access for cable connections.

3. Grounding: Indicate location of TGB and its mounting detail showing standoff insulators and wall-mounting brackets.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer, qualified layout technician, installation supervisor, and field inspector.

B. Seismic Qualification Data: Certificates, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions. Base certification on the maximum number of components capable of being mounted in each rack type. Identify components on which certification is based.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Cabling installer must have personnel certified by BICSI on staff.

1. Layout Responsibility: Preparation of Shop Drawings shall be under direct supervision of [RCDD] [Technician].

2. Installation Supervision: Installation shall be under direct supervision of [Technician] [Installer 2, Copper or Fiber], who shall be present at all times when Work of this Section is performed at Project site.

3. Field Inspector: Currently registered by BICSI as [RCDD] [Technician] to perform on-site inspection.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Equipment shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

B. UL listed.

C. RoHS compliant.

D. Compliant with requirements of the Payment Card Industry Data Security Standard.

2.2 BACKBOARDS

A. Backboards: Plywood, fire-retardant treated, 3/4 by 48 by 96 inches (19 by 1220 by 2440 mm). Comply with requirements for plywood backing panels specified in Section 061000 "Rough Carpentry."

2.3 19-INCH EQUIPMENT RACKS

1. By Division 27

2.4 UNINTERUPTIBLE POWER SOURCE

A. Each Rack will be fitted with a Uninterruptible Power source

B. Key Specifications

1. Model: SMART2200RMXLN

2. Load Capacity: 2.2 kVA (1920 W)

3. Power Factor: 0.87

4. Nominal AC Input: 120V, 60 Hz

5. Nominal AC Output: 120V, 60 Hz

6. AC Outlets: 4 x 5-15R, 4 x 5-15/20R

7. Switched Outlet Banks: 2 switchable single-outlet load banks (1 x 5-15/20R, 1 x 5-15R)

8. Output Waveform (AC Mode): Pure Sine Wave

9. Output Waveform (Battery Mode): Pure Sine Wave

10. Input Cord: 10 ft. (3 m) Cord with 5-20P Plug

11. Half-Load Runtime: 12 min. (960 W Load)

12. Communications: USB Port (HID-Compliant); Serial Port (DB9); Pre-Installed Network Card; EPO

13. User-Replaceable Battery: Yes (RBC94-2U)

14. Expandable Battery Runtime: Yes (Requires optional external battery pack)

15. External Battery Pack Compatibility: BP48V24-2U (limit 1); BP48V60RT-3U (multi-pack compatible); BP48V27-2US (multi-pack compatible)

16. Primary Form Factor: 2U Rack (Supports 4-post rack installation with included kit. Add 2POSTRMKITWM for 2-post rack or wall-mount installation. Add 2-9USTAND for tower installation.)

17. Dimensions: 3.5 x 17.5 x 19.5 in. (8.9 x 44.5 x 49.6 cm)

18. Weight: 57.6 lb. (26.2 kg)

19. Standards: UL 1778 (USA); CSA (Canada); NOM (Mexico); FCC (EMI); ENERGY STAR; RoHS

20. Product Warranty (Worldwide): 3-Year Limited Warranty (Registration required for third year.)

21. Connected Equipment Insurance (U.S., Canada and Puerto Rico): $250,000

22. What's Included: UPS, Pre-Installed Network Card, 4-Post Rack Installation Kit, USB/Serial/EPO Cabling, PowerAlert Software, Manual

2.5 GROUNDING

A. Comply with requirements in Section 270526 "Grounding and Bonding for Communications Systems" for grounding conductors and connectors.

B. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Chatsworth Products, Inc.

2. Harger Lightning & Grounding; business of Harger, Inc.

3. Panduit Corp.

C. Rack and Cabinet TGBs: Rectangular bars of hard-drawn solid copper, accepting conductors ranging from No. 14 to No. 2/0 AWG, NRTL listed as complying with UL 467, and complying with TIA-606-B. Predrilling shall be with holes for use with lugs specified in this Section.

1. Cabinet-Mounted TGB: Terminal block, with stainless-steel or copper-plated hardware for attachment to cabinet.

2. Rack-Mounted Horizontal TGB: Designed for mounting in 19- or 23-inch (482.6- or 584.2-mm) equipment racks. Include a copper splice bar for transitioning to an adjoining rack, and stainless-steel or copper-plated hardware for attachment to the rack.

3. Rack-Mounted Vertical TGB: 72 or 36 inches (1828.8 or 914.4 mm) long, with stainless-steel or copper-plated hardware for attachment to rack.

2.6 ENCLOSURES

A. Field Distribution Enclosure – Vehicle Control Points
1. Rated: NEMA 4X
2. Construction: Stainless Steel
3. Hinge: Continuous
4. Latch: D Style with Construction Core
5. Dimensions: 22in (H) x 24in (W) x 8in (D)
6. Tamper: Tamper Switch, Toggle Style

2.7 LABELING

A. Comply with TIA-606-B and UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Comply with NECA 1.

B. Comply with BICSI TDMM for layout of communications equipment spaces.

C. Comply with BICSI ITSIMM for installation of communications equipment spaces.

D. Bundle, lace, and train conductors and cables to terminal points without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

E. Coordinate layout and installation of communications equipment in racks and room. Coordinate service entrance configuration with service provider.

1. Meet jointly with system providers, equipment suppliers, and Owner to exchange information and agree on details of equipment configurations and installation interfaces.

2. Record agreements reached in meetings and distribute them to other participants.

3. Adjust configurations and locations of distribution frames, cross-connects, and patch panels in equipment spaces to accommodate and optimize configuration and space requirements of telecommunications equipment.

4. Adjust configurations and locations of equipment with distribution frames, cross-connects, and patch panels of cabling systems of other communications, electronic safety and security, and related systems that share space in equipment room.

F. Coordinate location of power raceways and receptacles with locations of communications equipment requiring electrical power to operate.

3.2 GROUNDING

A. Comply with NECA/BICSI 607.

B. Install grounding according to BICSI ITSIMM, "Bonding, Grounding (Earthing) and Electrical Protection" Ch.

C. Locate TGB to minimize length of bonding conductors. Fasten to wall, allowing at least 2 inches (50 mm) of clearance behind TGB. Connect TGB with a minimum No. 4 AWG grounding electrode conductor from TGB to suitable electrical building ground. Connect rack TGB to near TGB or the TMGB.

Retain subparagraph below if screened twisted-pair cables and coaxial cables are in communications equipment spaces.

1. Bond the shield of shielded cable to patch panel, and bond patch panel to TGB or TMGB.

3.3 IDENTIFICATION

A. Coordinate system components, wiring, and cabling complying with TIA-606-B. Comply with requirements in Section 270553 "Identification for Electrical Systems."

B. Comply with requirements in Section 099123 "Interior Painting" for painting backboards. For fire-resistant plywood, do not paint over manufacturer's label.

C. Paint and label colors for equipment identification shall comply with TIA-606-B for Class 2 level of administration, including optional identification requirements of this standard.

D. Labels shall be machine printed. Type shall be 1/4 inch in height.

END OF SECTION

SECTION 28 13 00 – PHYSICAL ACCESS CONTROL SYSTEM

PART 1 - GENERAL

1.1 QUALITY ASSURANCE

A. Installer Qualifications: Must have on staff a registered communication distribution designer certified by Building Industry Consulting Service International.

1.2 RELATED SECTIONS

A. Section 280500 Common Work Results for Electronic Security

B. Section 280513 Conductors and Cables for Electronic Safety and Security" for cabling between master control units and field-mounted devices and control units.

C. Section 281300 Access Control that are used to control access to and throughout the facility and provide audit and reporting for all subsystems listed.

D. Section 281600 Intrusion Detection that provide sensor level intrusion for and throughout the facility and vehicle parking areas and utility areas.

E. Section 282300 Video surveillance systems shall be integrated with monitoring and control system specified in Section 280500 “Electronic Security”, Section 281600 "Intrusion Detection,”

1.3 DESCRIPTION

A. Security Access System: PC-based central station and field-installed controllers, connected by a high-speed electronic data transmission network.

B. Network Connecting the Central Station and Workstations: LAN.

C. Network(s) Connecting PCs and Controllers:

1. Local area, Fast Ethernet Gigabit-Ethernet, star topology network based on TCP/IP.

1.4 SUMMARY

A. This Section includes access control devices to be connected to the Security Management System (SMS).

1. Access Control:

a. Regulating access through doors, gates, traffic-control bollards and others access controls as specified in drawing documents.
b. Anti-passback where required.
c. Surge and tamper protection.

d. Secondary alarm annunciator.
e. Card readers.
f. Push-button switches.
g. Reporting.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Genetec or approve equal

2.2 ACCESS CONTROL SYSTEM

A. Electronic Access Control System General Requirements

1. The ACS shall be an enterprise class IP access control software solution. It shall be fully embedded within a Unified Security Platform (USP). The USP shall allow the seamless unification of the ACS with an IP video management system (VMS).

2. The ACS shall be highly scalable to support configurations consisting of thousands of doors with facilities spanning multiple geographic areas.

3. The ACS shall support an unrestricted number of logs and historical transactions (events and alarms) with the maximum allowed being limited by the amount of hard disk space available.

4. The ACS shall support a variety of access control functionalities, including but not limited to:

a. Controller (Unit) management, door management, elevator management, and area management.

b. Cardholder and cardholder group management, credential management, and access rule management.

c. Badge printing and template creation.

d. Visitor Management. (Specifier, additional license required)

e. People counting, area presence tracking, and mustering.

f. Offering a framework for third party hardware integration such as card and signature scanner.

B. Manufacturer:

1. Genetec Security Center: *(Specifier, select one of the following)*

a. Synergis Enterprise

b. Synergis Professional

c. Synergis Standard

C. Certification

1. The ACS shall be certified

a. UL-294

b. ULC-S319

c. EN-60839-11-1

d. CSPN

2.3 FAILOVER AND STANDBY REQUIREMENTS

A. The USP shall support native and off-the-shelf failover options.

B. Failover Directory *(Specifier, additional license required per server that will failover, Enterprise only)*

1. The Standby Directory shall act as a replacement SSM on hot standby, ready to take over as the acting Directory in case the primary Directory fails. The failover shall occur in less than 1 minute. No action from the user shall be required.

2. The USP shall support up to five (5) Directories on standby, lined up to take over as the acting Directory in a cascading fashion.

3. The Standby Directory shall keep its configuration database synchronized with the primary Directory.

4. The Standby Directory shall support disaster recovery scenarios where a server can be located in another geographic area (or building) and only take over if all other Directories become offline.

5. The Standby Directory shall support synchronization of the configuration databases using a backup and restore mechanism. The synchronization period shall be configurable from 15 minutes to 1 week.

6. The Standby Directory shall support real-time synchronization of the configuration databases using SQL Mirroring or SQL Always On.

C. Off-the-shelf standby/failover options (excluding the VMS Archiver) shall include: *(Specifier, additional license required per server that will failover, Enterprise only)*

1. Native role failover across multiple servers

2. Windows Clustering

3. NEC ExpressCluster X LAN

2.4 ACS ACCESS MANAGEMENT

A. The ACS shall be based on an open architecture able to support multiple access control hardware manufacturers. The ACS shall be able to integrate with multiple non-proprietary interface modules and controllers, access readers, and other third party applications.

B. The ACS shall be an IP enabled solution. All communication between the ACS and hardware controllers shall be based on standard TCP/IP protocol.

C. Access Manager Role

1. The Access Manager Role shall be the server that synchronizes all access control hardware units under its control, such as door controllers and I/O modules. It shall also be able to validate and log all access activities and events when the door controllers and I/O modules are online.

2. The Access Manager Role shall maintain the communication link with the hardware controllers under its control. It shall also continuously monitor whether the controllers are online or offline.

3. Synchronization of hardware units shall be automated and transparent to users and shall occur in the background. It shall also be possible to manually synchronize units or to synchronize units on a schedule.

4. The Access Manager Role shall support doors and controllers located within one or more facilities. The Access Server shall support a minimum of 200 readers and up to 2000 readers per computer.

D. The Access Server shall store all access events associated with the doors, areas, hardware zones (hardware input points), elevators, and controllers under its direct control.

2.5 ACS GLOBAL CARDHOLDER MANAGEMENT

A. The ACS shall support global cardholder management and synchronization between a central independent site and remote independent sites, all of which can have their own Directory and databases.

B. It shall be possible to synchronize the following entities and their configuration data:

1. Cardholders (incl. custom fields)

2. Cardholder groups

3. Credentials

4. Badge templates

C. Cardholders and other synchronized entities can be added centrally and synchronized to remote sites for central cardholder management.

D. Cardholders and other synchronized entities can be added at remote sites and synchronized to the central site and other remote sites.

E. The ACS shall support the assignment of a single card per cardholder across all of an organization's sites.

F. Manual and scheduled synchronization shall be supported.

G. The ACS shall support Manufacturer OSDP command.

2.6 ACS HARDWARE COMPATIBILITY LIST

A. The ACS shall have an open architecture that supports the integration of third party IP-based door controllers and I/O modules. The ACS shall simultaneously support mixed configurations of access control hardware from multiple vendors.

B. The ACS shall support SAM onboard to hold DESfire encryption keys.

C. The ACS shall support 802.1x authentication.

D. The ACS shall support embedded certificate validation engine.

E. The ACS shall support the use of TLS 1.2 and certificates.

F. The ACS shall support OSDP Secure Channel.

G. The ACS shall support OSDP transparent reader mode to read DESfire credentials.

H. The ACS shall support multiple types of hardware devices: single-reader controllers, 2-reader controllers, 1- to 64-reader controllers, integrated readers and door controllers, and Power-over-Ethernet (PoE) enabled door controllers.

I. The ACS shall support most industry standard card readers that output card data using OSDP and Wiegand protocol, and Clock-and-Data.

J. The ACS shall support the following IP-enabled controllers. For a description of the capabilities of the controller, refer to the specific controller's A&E specifications and design:

1. Synergis Master Controller

2. Synergis Cloud Link

3. Synergis IX

4. SharpV

5. HID VertX

6. HID VertX EVO
7. HID Edge
8. HID Edge EVO
9. PW6000 controllers
10. Mercury EP controllers
11. Mercury LP controllers
12. Mercury SIO module
13. Mercury M5 Bridge
14. Mercury MS Bridge
15. Assa Abloy Aperio RS485 8 to 1 hub
16. Assa Aperio AH40 (IP) hub
17. Assa Abloy IP Locks (no DSR required)
    a. Corbin Russwin
    b. Sargent Passport
    c. Sargent Profile
    d. IN220
18. Salto Sallis RS485 and PoE routers
19. Salto SVN
20. Schlage AD-300 and AD-400 electronic locks
21. Schlage Control wireless lock
22. Schlage NDE, LE, FE, and BE Networked wireless Mortise lock
23. Axis A1001
24. Axis A1601
25. STid RS485 readers
26. DDS AS34/TPL4
27. SimonsVoss Smart Intego

K. The following USB enrollment readers shall be supported:

1. RF Ideas pcProx HID USB reader for enrolling proximity cards

2. RF Ideas AIR ID Enroll iCLASS ID# USB reader for enrolling HID iCLASS cards

3. RF Ideas AIR ID Enroll 14443/15693 CSN USB reader for enrolling a MIFARE card using the CSN (card serial number)

4. RF Idea AIR ID Enroll pcProx Plus w/iCLASS reader for enrolling proximity and iCLASS cards

5. STid STR-W35-E/PH5-5AA

6. HID Omnikey 5x2x USB readers

2.7 SEAMLESS UNIFICATION WITH VMS

A. Through the USP, the ACS shall support integration with an IP Video Surveillance System or MVS. Integration with an IP video surveillance system shall permit the user to view live and recorded video.

B. Users shall be able to associate one or more video cameras to the following entity types: doors, elevator and hardware zones (input points), and more.

C. The Monitoring UI shall present a true Unified Security Interface for access control and video surveillance. Advanced live video viewing and playback of archived video shall be available through the Monitoring UI.

D. It shall be possible to view video associated with access control events when viewing a report.

2.8 ACS CONTROLLER (UNIT) MANAGEMENT

A. The ACS shall support the discovery, configuration, and management of IP enabled controllers and I/O modules (hardware units). A user shall be permitted to add, delete, or modify a controller if they have the appropriate privileges.

B. The ACS shall support unit configuration through a preconfigured door template.

C. The ACS shall support automatic unit discovery. The user shall establish the settings for discovery ports and for the types of unit discovery and the ACS shall automatically detect all connected devices.

D. The ACS shall support a unit swap utility for swapping out an existing controller with a new controller. The unit swap utility shall avoid the reprogramming of the system whenever a unit is replaced. All logs and events from the old unit shall be maintained.

E. The ACS shall support pre-configuration of the system prior to the physical hardware installation.

F. The ACS shall support Firmware upgrade in bulk from the application.

G. The ACS shall support MIFARE DESfire configuration central management.

2.9 ACS CARDHOLDER AND CARDHOLDER GROUP MANAGEMENT

A. The ACS shall support the configuration and management of cardholders and cardholder groups. A user shall be able to add, delete, or modify a cardholder or cardholder group if they have the appropriate privileges.

B. Custom fields shall be supported for both cardholders and cardholder groups.

C. The ACS shall permit the following activation/expiration options for a cardholder's profile: delayed activation of a cardholder's profile, expiration based on the date of first use of credentials, or expiration on a user-defined date.

D. It shall be possible to set a start date and expiration date for the association of a cardholder and an access rule for temporary access.

E. It shall be possible to associate a picture to a cardholder's profile. The picture shall be imported from a file, captured with a digital camera, or captured from a video surveillance camera. When a cardholder event occurs, the picture of the cardholder shall be displayed in the Monitoring UI. The ACS shall support multiple standard picture formats.

F. Cardholder groups shall enable the grouping of cardholders to facilitate mass changes to system settings. It shall be possible to assign cardholder groups to access rules, thus avoiding the assignment of one cardholder at a time.

G. It shall be possible to search by picture association, custom fields, names, and credential codes.

H. It shall be possible to select multiple cardholders for immediate deactivation or reactivation.

I. The ACS shall support the synchronization of cardholders and cardholders group through Active Directory including the credentials and pictures of the cardholders. *(Specifier, Active Directory integration requires a license and available in Professional and up).* It shall be possible to import cardholders from Azure AD.

J. It shall support the ability to track unused credentials for x days.

2.10 ACS CREDENTIAL MANAGEMENT

A. The ACS shall support the configuration and management of credentials, for example access cards and keypad PIN numbers. A user shall be able to add, delete, or modify a credential if the user has the appropriate privileges.

B. The ACS shall support reader transparent mode.

C. Users shall be able to add Custom Fields (user-defined fields) to credentials. Creating a new credential shall be accomplished either manually or automatically.

D. Automatic creation shall allow the user to create a credential entity by presenting a credential to a selected reader. The ACS shall read the card data and associate it to the credential entity. It shall be possible to automatically enroll any card format.

E. The ACS shall support high assurance credentials using validation of a certificate, such as PIV, PIV-I, and CIV.

F. The ACS shall support multiple credentials per cardholder without necessitating duplicate cardholder information. The ACS shall automatically detect and prevent attempts to register an already-registered credential.

G. It shall be possible to natively encode DESfire credentials from the user interface using customer's own keys and configuration.

H. Batch enrollment of credentials shall be supported.

I. The ACS shall provide a workflow for badge issuance and card requests.

J. It shall be possible to support natively PIV credential in the system.

K. The ACS shall support the use of license plates as a credential.

L. The ACS shall support duress pin.

M. The ACS shall natively support the creation and management of mobile IDs in the same way as other credentials.

2.11 ACS CUSTOM CARD FORMATS

A. A custom card format feature shall allow the administrator to add additional custom card formats using an intuitive tool within the Configuration UI. The custom card format tool shall be flexible in the following ways:

1. Once enrolled, new custom card formats shall appear in the card format lists for manual card enrollment.

2. An unrestricted number of additional custom card formats can be added.

3. Shall support credential with up to 256 bits.

4. The administrator shall be able to set the following options when defining a new format:

   a. The order in which card fields appear in the user interface or CSA.

   b. Whether a field is hidden from or visible to an operator.

   c. Whether a field is read only or modifiable by an operator.

   d. Complex parity checking schemes.

   e. The order and location of a field's data. Location can be defined on a bit-by-bit basis.

   f. Application ID and keys for DESfire EV1 credentials.

2.12 ACS BADGE DESIGNER

A. The badge designer shall allow the creation of badge templates that define the content and presentation format of a cardholder badge to be printed.

B. Badge production shall consist of selecting the credential, the badge template, and clicking print.

C. Batch printing of cards shall be available.

D. The contents of a badge template can include: cardholder's first and last name, picture, custom fields, bitmap graphics, lines, ovals, rectangles, dynamic text labels linked to custom fields and static text labels, and barcodes (Interleaved 2 of 5, Extended Code 39).

E. Copy and paste of badge template objects shall be available.

F. It shall be possible to set the border thickness and color, the fill color of badge objects (content), and the color of text labels.

G. Settings, such as object transparency, text orientation, and auto-sizing of text shall be available or transparent to the user.

H. Supported badge formats shall be (portrait and landscape): CR70 (2.875" x 2.125"), CR80 (3.37" x 2.125"), CR90 (3.63" x 2.37"), CR100 (3.88" x 2.63"), and custom card sizes.

I. Dual-sided badges shall be supported.

J. A badge template import and export function shall be available to allow the sharing of badge templates between distinct or independent ACS.

K. Chromakey shall be supported.

2.13 ACS DOOR MANAGEMENT

A. The ACS shall support the configuration and management of doors. A user shall be able to add, delete, or modify a door if they have the appropriate privileges.

B. The ACS shall permit multiple access rules to be associated to a door.

C. It shall be possible to unlock all doors from an area at once.

D. The ACS shall support the following forms of authentication: Card Only, Card or Keypad (PIN), or Card and Keypad (PIN). It shall be possible to define a schedule for when Card Only or Card and Keypad authentication modes shall be required.

E. It shall be possible to set an extended grant time on a per-door basis (in addition to the standard grant time). Cardholder properties shall include the option of using the extended grant time. When flagged cardholders are granted access, the door shall be unlocked for the duration of the extended grant time instead of the standard grant time.

F. The ACS shall allow the configuration of the relocking mode on doors such as on door open, after a definite time, or on door close.

G. The ACS shall support the ability to enforce the use of two valid reads from different cardholders to grant access to an area.

H. The ACS shall support the ability to enable access rules for other cardholders once a supervisor has accessed an area.

I. The ACS shall support the ability to enable unlocking schedule on a door once an employee has entered the facility.

J. Readerless doors.

1. The ACS shall support doors configured solely with a lock, a REX, and a door contact but without readers.

2. The implementation of a readerless door shall be possible with the use of standard access hardware IO modules. External hardware, such as timers, shall not be required.

3. Unlocking schedules shall be programmable for readerless doors.

4. Standard door activity reports shall also be possible with readerless doors.

K. Unlocking schedules and exceptions to unlocking schedules shall be associated with a door. An unlocking schedule shall determine when a door should be automatically unlocked. The ACS shall also support the use of a specific offline unlocking schedule. Exceptions to unlocking schedules shall be used to define time periods during which unlocking schedules shall not be applied, such as during statutory holidays.

L. The ACS shall support one or more cameras per door. Video shall then be associated to door access events, such as access grant or access denied.

2.14 ACS ELEVATOR MANAGEMENT

A. The ACS shall support the configuration and management of elevators. A user shall be able to add, delete, or modify an elevator if they have the appropriate privileges.

B. The ACS shall be able to control access to specific floors using a reader within the elevator cab. Control shall be available through the use of a controller with an interface to a reader and to multiple output modules with relays.

C. Elevator floor selections shall be tracked using a controller with an interface to multiple input modules. Floor tracking shall be available within an elevator activity report.

D. The elevator control module shall continue to function in offline mode should communication between the ACS and the controller fail.

E. The ACS shall support one or more cameras per elevator cab. Video shall then be associated to elevator access events, such as access granted or access denied.

2.15 ACS VISITOR MANAGEMENT *(SPECIFIER, ADDITIONAL LICENSE REQUIRED)*

A. The ACS shall support the configuration and management of visitors. A user shall be able to enroll or remove a visitor if they have the appropriate privileges. The ACS shall support the check-in and check-out of visitors from the Monitoring UI.

B. A visitor check-in wizard shall facilitate the enrollment process, allowing a user to specify the visitor's specific information.

C. It shall be possible to set a host leading a group of visitors and a trailing host walking behind visitors, triggering alert if a visitor is not following the delegation.

D. The ACS shall permit the following credential options during visitor check-in:

1. Use an existing credential.

2. Automatically create a new credential.

3. Manually create a new credential.

E. The ACS shall support the creation of a pool of visitor credentials in advance. Existing visitor credentials shall be assigned to visitors during the check-in process.

F. The ACS shall permit cardholder groups to be designated as "available for visitors". Users shall be able to define the access privileges for the cardholder groups (visitor cardholder groups) in advance. During visitor check-in, the user shall select the appropriate visitor cardholder group to associate with a visitor. All of the visitor cardholder group access privileges shall be automatically transferred to the visitor. This feature shall permit the creation of multiple types of visitor groups and associated privileges, such as for contractors, VIPs, and day visitors. Visitors added to a visitor cardholder group in the Monitoring UI shall be automatically updated in the Configuration UI cardholder group screen.

G. A visitor's profile shall support the real-time modification of visitor information after a visitor has checked-in.

H. The ACS shall also provide comprehensive visitor tracking and visitor reporting. Through the real-time tracking feature, the ACS shall generate a real-time and historical visitor activity listing in the Monitoring UI. The ACS shall also generate visitor-specific reports that provide comprehensive listings of visitors as well as full details on their movement.

I. It shall be possible to exempt a visitor from any antipassback rules in effect.

J. The operator shall be able to print visitor badges during the check-in process. The printing of both paper badges (visitor without an assigned credential) and actual credentials shall be supported.

K. Visitor management and reporting shall be available through the Web Client as well.

L. It shall be possible to locate a visitor`s information or profile by swiping the visitor's credential (card) at a USB reader.

M. It shall be possible to tag the person visited to the visitor's profile.

N. It shall be possible to require that the visitor must have an escort to enter an area and that the escort must badge-in to confirm the access of the visitor.

O. The ACS system shall support third party visitor management solutions. *(Specifier, additional license required)*

2.16 ACS PEOPLE COUNTING & AREA PRESENCE TRACKING (MUSTERING) *(SPECIFIER, ADDITIONAL LICENSE REQUIRED)*

A. The ACS shall support people counting (or area presence tracking). The ACS shall be able to monitor and report the number of cardholders in an area in real-time and for all areas. Monitoring shall be based on the entire access control infrastructure, for both local areas and those in remote geographic locations. People counting can also be used to perform mustering.

B. It shall be possible to control the maximum occupancy of an area by setting a threshold and user notification when reaching the limit.

C. The ACS shall report area presence counts in the UI. Area presence tracks shall dynamically track the total number of cardholders in an area. Displayed data shall be updated dynamically.

D. The ACS shall support mustering through the use of mobile readers (requires additional software and hardware from third-party).

E. The ACS shall provide a native dedicated mustering task using a USB, mobile, or wall reader.

F. The ACS shall be able to generate an area presence report listing the cardholders located in one or more areas, accessible through the Monitoring UI. It shall be possible to filter the report by area and time period. The report shall also include activity from sub-areas (nested areas).

G. Through people counting, the ACS shall be able to generate First Person In and Last Person Out events. The First Person In event shall detect when the first cardholder enters an empty area. The Last Person Out event shall detect when the last cardholder leaves an area. It shall be possible to trigger actions from both events such as sending a message or triggering an alarm.

H. The ACS shall be able to determine the entry of a cardholder based on a dedicated sensor.

I. The ACS shall provide a visual HTML dashboard to aid with the evacuation that can run on mobile devices.

J. The ACS shall provide the ability to globally view all evacuations simultaneously or per area.

K. On an evacuation, the ACS shall set all cardholders as unknown until they reach a mustering point.

L. It shall be possible to mark a cardholder as safe or unsafe from the web evacuation assistant.

M. It shall be possible to filter by cardholder groups or custom fields in the mustering dashboard.

N. The ACS shall support wall-mounted readers and mobile-handled devices for mustering.

O. The ACS shall provide distinct visual indication as an area is being evacuated.

P. The ACS shall have the ability to configure a mustering point per area.

Q. The ACS shall have the ability to reset APB at the end of an evacuation.

2.17 ACS CUSTOM FIELDS (USER-DEFINED FIELDS)

A. The ACS shall permit the creation of custom fields. Up to 1,000 custom fields shall be supported.

B. Custom fields shall be supported for the following entities: cardholders, cardholder groups, credentials, and visitors.

C. Supported custom fields shall include text, integers, decimal numbers, dates, Boolean, and images (graphics).

D. Users shall be able to define a default value for a custom field.

E. The creation of new custom field types shall be possible. New custom field types shall be based on the standard custom fields supported. They shall support user-defined values from which an operator must make a selection.

F. Administrators have the ability to define which users can view and modify specific custom fields. This shall limit the access to custom field data to users with pre-defined privileges. The ACS shall support querying and report generation using custom fields.

G. Custom fields can be grouped and ordered within these groups as defined by the user.

H. Values for custom fields can be imported using the Import Tool.

2.18 ACS IMPORT TOOL *(SPECIFIER, ADDITIONAL LICENSE REQUIRED)*

A. The ACS shall support an integrated Import Tool to facilitate the import of existing cardholder and credential data. The import of data shall be through the use the CSV file format. The tool shall be available from the Configuration UI.

B. It shall be possible to connect to an external Microsoft SQL or Oracle database to import cardholders.

C. The Import Tool shall also support the ability to manually import data that has been exported from a third party database if it is in CSV format.

D. The import tool shall permit the import of the following data:

1. Cardholder name, descriptions, picture, email, and status.

2. Cardholder group information.

3. Credential name, status, format, and card number (including credentials with custom formats).

4. Partition information.

5. Custom fields.

6. Activation date and expiration date.

7. Update cardholder group association.

E. Full flexibility in selecting the fields to be imported during an import session shall be available.

F. The option to use a custom and unique cardholder key shall be specified during the import process to ensure that cardholders with duplicate names will not have their data overwritten. Cardholder key generation shall be automated. The end user shall have the option to select which fields will be used to create this unique key, for example credential number, custom fields, or cardholder name.

G. The ACS shall also support re-importing a CSV file containing new information to update existing information in the ACS database. Re-importing shall enable bulk amendments to existing access control data.

2.19 GENERAL CLIENT SOFTWARE REQUIREMENTS

A. The Client Software Applications (CSA) shall provide the user interface for USP configuration and monitoring over any network and be accessible locally or from a remote connection.

B. The CSA shall consist of the Configuration UI for system configuration and the Monitoring UI for monitoring. The CSA shall be Windows-based and provide an easy-to-use graphical user interface (UI).

C. The CSA for monitoring shall support running in 64-bit mode.

D. The Server Administrator shall be used to configure the server database(s). It shall be web-based and accessible locally on the SSM or across the network.

E. The CSA shall seamlessly merge access control, license plate recognition (ALPR), and video functionalities within the same user application.

F. The USP shall use the latest user interface (UI) development and programming technologies such as Microsoft WPF (Windows Presentation Foundation), the XAML markup language, and the .NET software framework.

G. All applications shall provide an authentication mechanism, which verifies the validity of the user. As such, the administrator (who has all rights and privileges) can define specific access rights and privileges for each user in the system.

H. Logging on to a CSA shall be done either through locally stored USP user accounts and passwords or using the operator's Windows credentials when Active Directory integration is enabled. *(Specifier, Professional and up, additional license required for Active Directory)*

I. When integrated with Microsoft's Active Directory, the CSA and USP shall authenticate users using their Windows credentials. As a result, the USP will benefit from Active Directory password authentication and strong security features. *(Specifier, Professional and up, additional license required)*

J. When integrated with an external identity provider such as Windows Active Directory, ADFS (Active Directory Federation Services) or an Open ID Connect/SAML2 identity provider (ex.: Azure AD), the CSA and USP shall authenticate using a Single-Sign On experience to the users. As a result, the USP will benefit from reusing the same credential throughout enterprise applications. *(Specifier, Professional and up, additional license required).*

K. The CSA shall support multiple languages, including but not limited to the following: English, French, Arabic, Czech, Dutch, German, Hebrew, Hungarian, Italian, Japanese, Korean, Norwegian, Persian (Farsi), Polish, Portuguese (Brazilian), Simplified and Traditional Chinese, Russian, Spanish, Swedish, Thai, Turkish, and Vietnamese.

L. To enhance usability and operator efficiency, the Configuration UI and Monitoring UI shall support many of the latest UI such as:

1. A customizable Home Page that includes favorite and recently used tasks.

2. Task-oriented approach for administrator/operator activities where each type of activity (surveillance, visitor management, individual reports, and more) is an operator task.

3. Consolidated and consistent workflows for video, ALPR, and access control.

4. Single click functionality for reporting and tracking. The Monitoring UI shall support both single-click reporting for access control, ALPR, and video, as well as single-click tracking of areas, cameras, doors, zones, cardholders, elevators, ALPR entities, and more. Single-click reporting or tracking shall create a new task with the selected entities to report on or track.

M. Configuration UI and Monitoring UI Home Page and Tasks

1. The Configuration UI and Monitoring UI shall be task-oriented.

2. A task shall be user interface design patterns whose goal is to simplify the user interface by grouping related features from different systems such as video and access, in the same display window. Features shall be grouped together in a task based on their shared ability to help the user perform a specific task.

3. Tasks shall be accessible via the Home Page of either the Configuration or the Surveillance CSA.

4. Newly created tasks shall be accessible via the Configuration UI or the Monitoring UI taskbar.

5. Similar tasks shall be grouped into the following categories:

a. Operation: Access control management, LRP management, and more.

b. Investigation: access control activity reports, visitor activity reports, alarm reports, and more.

c. Maintenance: Access control and, troubleshooters, audit trails, health-related reports, and more.

1. An operator shall be able to launch a specific task only if they have the appropriate privileges.

2. The Home Page content shall be customizable through the use of privileges to hide tasks that an operator should not have access to and through a list of favorite and recently used tasks. In addition, editing a USP XML file to add new tasks on the fly shall also be possible.

N. The Contractor shall provide up to XX number of simultaneous Clients. *(Specifier, client connections are concurrent, the first 5 client connections are included, specify a Site License after 40 client connections (Enterprise only))*

2.20 CONFIGURATION USER INTERFACE (UI)

A. General

1. The Configuration UI application shall allow the administrator or users with appropriate privileges to change the system configuration. The Configuration UI shall provide decentralized configuration and administration of the USP system from anywhere on the IP network.

2. The configuration of all embedded ACS, VMS, and ALPR systems shall be accessible via the Configuration UI.

3. The Configuration UI shall have a home page with single-click access to various tasks.

4. The Configuration UI shall include a variety of tools such as troubleshooting utilities, import tools, and a unit discover tool, amongst many more.

5. The Configuration UI shall include a static reporting interface to:

a. View historical events based on entity activity. The user shall be able to perform such actions as printing a report and troubleshooting a specific access event from the reporting view.

b. View audit trails that show a history of user/administrator changes to an entity.

6. Common entities such as users, schedules, alarms, and many more, can be reused by all embedded systems (ACS, VMS, and ALPR).

2.21 ACS CLIENT USER INTERFACE (UI)

A. The Monitoring UI shall fulfill the role of a Unified Security Interface that is able to monitor video, ALPR, and access control events and alarms, as well as view live and recorded video.

B. The Monitoring UI shall provide a graphical user interface to control and monitor the USP over any IP network. It shall allow administrators and operators with appropriate privileges to monitor their unified security platform, run reports, and manage alarms.

C. To enhance usability and operator efficiency, the Monitoring UI shall support the following UI concepts:

1. Dynamically adaptive interface that adjusts in real-time to what the operator is doing.

2. Dynamic controls loaded with entity-specific widgets (for example, door and camera widgets).

3. Use of transparent overlays that can display multiple types of data in a seamless fashion.

4. Display tile menus and quick commands.

5. Consolidated and consistent workflows.

6. Tile menus and quick commands easily accessible within every display tile of the user workspace.

7. Single click functionality for reporting and tracking. The Monitoring UI shall support both single-click reporting for access control, ALPR, and video, as well as single-click tracking of areas, cameras, doors, zones, cardholders, elevators, ALPR entities, and more. Single-click reporting or tracking shall create a new task with the selected entities to report on or to track.

D. Monitoring UI Home Page and Tasks

1. Similar tasks shall be grouped into the following categories:

a. Operation: Access control/LRP/video surveillance, visitor management, mustering, access control and video alarm monitoring, and more.

b. Investigation: Video bookmark/motion/archive reports, access control activity reports, visitor activity reports, alarm reports, ALPR activity reports, and more.

c. Maintenance: Access control and video configuration reports, troubleshooters, audit trails, and more.

E. Dynamically Adaptive UI, Controls section, and Widgets

1. The Monitoring UI shall dynamically adapt to what the operator is doing. This shall be accomplished through the concept of widgets that are grouped in the Monitoring UI Controls section.

2. Widgets shall be mini-applications or mini-groupings in the Monitoring UI Controls section that let the operator perform common tasks and provide them with fast access to information and actions.

3. With a single click on an entity (for example, door or camera) the specific widgets associated to that entity appear and other non-relevant widgets disappear dynamically (instantly). Widgets shall bring the operator information such as door status and camera stream information, as well as user actions, such as door unlock, PTZ controls, and more.

4. Specific widgets include those for a door, camera, alarm, zone, display tile, video stream (statistics), PTZ camera, and more.

F. Operator Workflows

1. A workflow shall be a sequence of operations an operator or administrator shall execute to complete an activity. The “flow” relates to a clearly defined timeline or sequence for executing the activity.

2. The Monitoring UI shall be equipped with consistent workflows for the ALPR, video, and access control systems that it unifies.

3. Generating or printing a report, setting up or acknowledging an alarm, or creating an incident report shall follow the same process (workflow) whether the operator is working with video, ALPR, or access control, or with both video and access control.

G. Each task within the Monitoring UI shall consist of one or more of the following items:

1. Event list.

2. Logical tree. Doors, cameras, zones, ALPR units, and elevators shall be grouped under Areas in a hierarchical fashion.

3. Entities list of all entities being tracked.

4. Display tiles with various patterns (1 x 1, 2 x 2, and more).

5. Display tile menu with various commands related to cameras, doors, PTZ, and tile controls.

6. Control section with widgets.

H. The Monitoring UI shall support multiple event lists and display tile patterns, including:

1. Event/alarm list layout only

2. Display tile layout only

3. Display tile and alarm/event list combination

4. ALPR map and alarm/event list combination

I. User workspace customization

1. The user shall have full control over the user workspace through a variety of user-selectable customization options. Administrators shall also be able to limit what users and operators can modify in their workspace through privileges.

2. Once customized, the user shall be able to save their workspace.

3. The user workspace shall be accessible by a specific user from any client application on the network.

4. Display tile patterns shall be customizable.

5. Event or alarm lists shall span anywhere from a portion of the screen up to the entire screen and shall be resizable by the user. The length of event or alarm lists shall be user-defined. Scroll bars shall enable the user to navigate through lengthy lists of events and alarms.

6. The Monitoring UI shall support multiple display tile patterns (e.g. 1 display tile (1x1 matrix), 16 tiles (8x8 matrix), and multiple additional variations).

7. The Monitoring UI shall support as many monitors as the PC video adapters and Windows Operating System are capable of accepting.

8. Additional customization options include show/hide window panes, show/hide menus/toolbars, show/hide overlaid information on video, resize different window panes, and choice of tile display pattern on a per task basis.

J. The Monitoring UI shall provide an interface to support the following tasks and activities common to access control, ALPR, and video:

1. Monitoring the events from a live security system (ACS and/or VMS and/or ALPR).

2. Generating reports, including custom reports.

3. Monitoring and acknowledging alarms.

4. Creating and editing incidents and generating incident reports.

5. Displaying dynamic graphical maps and floor plans, as well as executing actions from dynamic graphical maps and floor plans.

6. Management and execution of hot actions and macros.

K. The Monitoring UI shall be able to monitor the activity of the following entities in real-time: areas, ALPR entities, doors, elevators, cameras, cardholders, cardholder groups, zones (input points), and more. The Monitoring UI shall provide an interface to support the following access control tasks and capabilities:

1. Monitoring and management of access events and alarms.

2. Viewing of cardholder picture or badge IDs.

3. Verification of cardholder picture IDs against live video.

4. Visitor management.

5. People counting or mustering, including resetting the people count in an area.

6. Door control, including remotely unlocking doors, overriding a door’s unlocking schedules, and enabling door maintenance mode.

7. Forgiving antipassback.

8. Generation of ACS configuration and activity reports.

9. Viewing of HTML files including alarm instructions.

L. Entity Monitoring

1. The USP shall permit the user to select multiple entities to monitor from the Monitoring UI by adding the entities one by one to the tracking list.

2. The Monitoring UI shall provide the option to filter which events shall be displayed in the display tile layout, event list layout, or both.

3. It shall be possible to lock a Monitoring UI display tile so that it only tracks the activity of a specific entity (for example, a specific door or camera).

4. The user shall be able to drag and drop an event from an event list (or an alarm from an alarm list) onto a display tile to view a license plate read, cardholder picture ID, badge ID, or live/archived video, among other options.

5. Event, alarm, monitoring/tracking, and report lists shall contain cardholder pictures where applicable.

6. The user shall be permitted to start or pause the viewing of events within each display tile.

M. Display Tile Packing and Unpacking

1. The Monitoring UI shall support single-click unpacking and packing for, areas, doors, zones, and alarms.

2. The packing and unpacking of entities shall allow operators to quickly obtain additional information and camera views of a specific entity.

3. The unpacking of an entity shall display associated entities. For example, unpacking a door with multiple associated cameras shall display all cameras associated with that door. Unpacking shall reconfigure the display tiles to be able to display all associated entities. For example, unpacking a door (or a zone or alarm) that is currently in a 1 x 1 tile configuration and that has 3 cameras tied to it will create a 1 x 3 display tile arrangement for viewing all associated entities.

4. Packing will return the display to the original tile pattern.

N. The following additional tools or utilities shall be available from the Monitoring UI: create credentials, create cardholders, and access control troubleshooter.

2.22 SERVER ADMINISTRATOR USER INTERFACE REQUIREMENTS

A. The Server Administrator shall be used to configure the SSM and the Directory Role (main configuration) and its database(s), to apply the license, and more.

B. The Server Administrator shall be a web-based application. Through the Server Administrator, it shall be possible to access the SSM across the network or locally on the server.

C. Access to the Server Administrator shall be protected via login name, password, and encrypted communications.

D. The Server Administrator shall allow the administrator (user) to perform the following functions:

1. Manage the system license.

2. Configure the database(s) and database server for the Directory Role.

3. Activate/Deactivate the Directory Role.

4. Manually back up the Directory Role database(s) and/or restore the server database(s), as well as configure scheduled backups of the databases.

5. Define the client-to-server communications security settings.

6. Configure the network communications hardware, including connection addresses and ports.

2.23 UNIFIED WEB CLIENT (UWC) GENERAL REQUIREMENTS

A. The USP shall support a unified web client (UWC) for access control, video, and automatic license plate recognition (ALPR).

B. The UWC shall be a truly thin client with no download required other than an internet web browser or standard web browser plugins.

C. The UWC shall be platform independent and run within Microsoft Edge, MS Internet Explorer, Firefox, Safari, and Google Chrome.

D. The UWC shall be designed as an HTML5 application.

E. The UWC shall support display on tablet format.

F. The UWC will support native H.264 video in the web client.

G. Web pages for the web client shall be managed and pushed by the Web Client Server. Microsoft IIS or any other web hosting service shall not be required given that all the web pages shall be hosted by the Mobile Server.

H. The Web Client Server shall provide the ability to define a unique URL to access the web client, to ensure the security of the application.

I. The UWC shall provide the ability to load a camera layout.

J. The UWC shall provide the ability to configure, save, and reload private camera layouts.

K. The UWC shall provide the ability to control PTZ cameras.

L. Functionalities:

1. Log in support shall be available using:

a. Username and password

b. Active Directory *(Specifier, Professional and up, additional license required for Active Directory)*

c. Azure Active Directory, ADFS, OpenID Connect or SAML2 identity provider *(Specifier, Professional and up, additional license required for OIDC & SAML2)*

2. Ability for user to change their password.

3. Encrypted communications for all transactions.

4. Print reports and export to CSV file.

5. Access Control.

   a. Cardholder and group (add/modify/delete)

   b. Credential management (add/modify/delete)

   c. Access rules management (add/modify/delete)

   d. Visitor management (check-in/modify/check-out)

   e. Unlock door

   f. Override the unlocking schedule on a door

   g. Door Activities report

6. Alarms.

   a. Alarm report

7. Threat Level management.

8. Automatic License Plate Recognition (ALPR).

   a. Live monitoring of the ALPR cameras

   b. ALPR reads and hits report

   c. Addition of plate numbers to hotlists

2.24 SMARTPHONE AND TABLET APP GENERAL REQUIREMENTS

A. The USP shall support mobile apps for various off-the-shelf devices. The mobile apps shall communicate with the USP over any Wi-Fi or cellular network connection.

B. Mobile apps shall communicate with the USP via a Mobile Server Role (MSR). All communication between the mobile apps and MSR shall be based on standard TCP/IP protocol and shall use the TLS encryption with digital certificates to secure the communication channel.

C. Supported device manufacturers shall include (refer to Mobile App specifications for latest compatibility list):

D. Apple devices running iOS 11.0 or later

E. Android devices 6.0 or later

F. It shall be possible to download the mobile apps from the Central application store (Apple iTunes App Store, Google Play).

G. It shall be possible to push configuration to mobile devices through a Mobile Device Management solution such as VWWare Workspace One or Microsoft Intune.

H. Functionalities

1. Core

a. Ability to logon/logoff the UPS using an authorized use profile of the system.

b. Ability to support passive authentication from a single sign-on provider (OpenID Connect or SAML2 identity provider).

c. Ability to use biometric features (thumbprint, face ID, etc.) to perform connection to the system.

d. Ability to change the picture or the password of the user of the mobile app.

e. Ability to view the current Threat Level of the system.

f. Ability to change the current Threat Level of the system.

g. Ability to execute hot actions configured in the user profile.

h. Ability to view entities from the USP:

2. Cameras

3. Doors

4. ALPR cameras

5. Web Tile Plugins

6. Layouts

7. Camera Sequences

8. Macros

9. Maps (geographical maps only) *(Specifier, additional license required, Plan Manager Advanced)*
   a. Ability to navigate the system hierarchical view of the entities and search entities in the system.

10. Video

a. Ability to view live and recorded video from the cameras of the USP. A maximum of eight cameras shall be displayed.

b. Ability to view video in native format (H.264).

c. Ability to display live and recorded video side-by-side for a specific camera.

d. Ability to perform digital zoom on cameras.

e. Ability to perform actions on cameras, such as add a bookmark, control a PTZ, control the iris/focus function, save a snapshot, and start/stop recording.

f. Ability to view camera layouts.

g. Ability to view camera sequences.

h. Ability to run a camera events report.

i. Ability to change the video quality on the cameras displayed on the mobile app.

j. Ability to use the camera of the smartphone and stream a live video feed to a video recorder in the system

11. Access Control
    a. Ability to view the door state and the door lock state.

    b. Ability to perform actions on a door such as unlock the door, set the door in maintenance mode, and override the door unlocking schedule.

12. Automatic License Plate Recognition
    a. Ability to view live events raised by an ALPR camera.

    b. Ability to view the read image, context image, and all metadata captured by the ALPR camera.

    c. Ability to run an ALPR event report.

    d. Ability to add a license plate to a hotlist on the system.

13. Alarm Management
    a. Ability to receive push notifications to notify mobile operators that an alarm was received.

    b. Ability to view all active alarms assigned to the mobile operator.

    c. Ability to perform action on an alarm such as acknowledge, forward, or alternate-acknowledge an active alarm.

    d. Ability to view entities attached to the alarm.

14. Map *(Specifier, additional license required, Plan Manager Advanced)*
    a. Ability to display a geographical map with USP entities geo-located on the map.

b. Ability to view any entity configured on the map.

c. Ability to go to pre-defined map locations using preset buttons.

d. Ability to search for entities or locations on the map.

15. Incident management
    a. Ability to view active incidents, sort and group them for a customized view.

    b. Ability to trigger incidents manually.

    c. Ability to get all details about an incident including related incidents, entities and documents.

    d. Ability to take ownership of an incident and respond to the defined standard operating procedure geared towards incident resolution.

I. It shall be possible to send a message from the client user interface to a mobile operator.

J. It shall be possible to send a live or playback video sequence from the client UI to a mobile operator.

K. It shall be possible to view mobile operators who enabled location tracking on a map in the system. The location of the mobile operator should be updated in real time. *(Specifier, additional license required, Plan Manager Advanced)*

2.25 HEALTH MONITOR

A. The USP shall monitor the health of the system, log health-related events, and calculate statistics.

B. USP services, roles, agents, units, and client apps will trigger health events.

C. The USP shall populate the Windows Event Log with health events related to USP roles, services, and client apps.

D. A dedicated role, the Health Monitoring Role, shall perform the following actions:

1. Monitor the health of the entire system and log events.

2. Calculate statistics within a specified time frame (hours, days, months).

3. Calculates availability for clients, servers and video/access/ALPR units.

E. A Health Monitoring task and Health History reporting task shall be available for live and historical reporting.

F. A Health Monitoring dashboard task shall be available in the client application user interface to provide a live display, such as pie charts and event lists, for quick visual assessment on the general health of the system.

G. A web-based, centralized health dashboard shall be available to remotely view unit and role health events of the USP.

H. Detailed system care statistics will be available through a web-based dashboard providing health metrics of USP entities and roles, including Uptime and mean-time-between-failures.

I. All health events raised in the system can be used for automating the USP event/action management.

J. Health events shall be accessible via the SDK (can be used to create SNMP traps).

2.26 USP GENERAL REQUIREMENTS

A. The Unified Security Platform (USP) shall be an enterprise class IP-enabled security and safety software solution.

B. The USP shall support the seamless unification of IP access control system (ACS), IP video management system (VMS), and IP automatic license plate recognition system (ALPR) under a single platform. The USP user interface (UI) applications shall present a unified security interface for the management, configuration, monitoring, and reporting of embedded ACS, VMS and ALPR systems, and associated edge devices.

C. Functionalities available with the USP shall include:

1. Configuration of embedded systems, such as ACS, ALPR, and VMS systems.

2. Live event monitoring.

3. Live video monitoring and playback of archived video.

4. Alarm management.

5. Reporting, including creating custom report templates and incident reports.

6. The Federation™ feature for global monitoring, reporting, and alarm management of multiple remote and independent ACS, VMS, and or ALPR systems spread across multiple facilities and geographic areas*. (Specifier, Enterprise only, additional license required)*

7. Global cardholder management across multiple facilities and geographic areas each with their own independent ACS system. *(Specifier, Enterprise Only, additional license required for each site)*

8. Microsoft Active Directory integration for synchronizing USP user accounts and ACS cardholder accounts. *(Specifier, Professional and up, additional license required)*

9. Intrusion device and panel integration (live monitoring, reporting, and arming/disarming). *(Specifier, Professional and up, additional license required)*

10. SIP Intercom device integration for bi-directional communication. *(Specifier, all versions, additional license required)*

11. Integration with third party systems and databases via plug-ins (access control, video analytics, point of sale, and more). *(Specifier, Professional and up, additional license required)*

12. Dynamic graphical map viewing.

13. Asset management system integration. *(Specifier, Professional and up, additional license required)*

D. The USP shall be deployed in one or more of the following types of installations:

1. Unified access, ALPR, video platform, and any combination thereof.

2. Standalone access control, video, or ALPR platform.

3. Unified access and video platform that federates multiple remote ACS, VMS, and ALPR.

4. Standalone access control that federates multiple independent remote ACS.

E. Licensing:

1. A single central license shall be applied centrally on the configuration server.

2. There shall be no requirement to apply a license at every server computer or client workstation.

3. Based on selected options, one or more embedded systems shall be enabled or disabled.

F. Hardware and Software Requirements:

1. The USP and embedded systems (video, license plate recognition, and access control) shall be designed to run on a standard PC-based platform loaded with a Windows operating system. The preferred operating system shall be coordinated with the Owner following the manufacturer supported operating systems.

2. The core client/server software shall be built in its entirety using the Microsoft .NET software framework and the C# (C-Sharp) programming language.

3. The USP database server(s) shall be built on Microsoft's SQL Server. The preferred SQL version shall be coordinated with the Owner and compatible with the USP.

4. The USP shall be compatible with virtual environments, including VMware and Microsoft Hyper-V.

5. The USP shall use the latest user interface (UI) development and programming technologies such as Microsoft WPF (Windows Presentation Foundation), the XAML markup language, and .NET software framework.

2.27 USP ARCHITECTURE

A. The USP shall be based on a client/server model. The USP shall consist of a standard Server Software Module (SSM) and Client Software Applications (CSA).

B. The USP shall be an IP enabled solution. All communication between the SSM and CSA shall be based on standard TCP/IP protocol and shall use TLS encryption with digital certificates to secure the communication channel.

C. The SSM shall be a Windows service that can be configured to start when the operating system is booted and run in the background. The SSM shall automatically launch at computer startup, regardless of whether or not a user is logged on the machine.

D. Users shall be able to deploy the SSM on a single server or across several servers for a distributed architecture. The USP shall not be restricted in the number of SSM deployed.

E. The USP shall support the concept of The Federation feature whereby multiple independent ACS, VMS, and ALPR installations can be merged into a single large virtual system for centralized monitoring, reporting, and alarm management. *(Specifier, Enterprise only, additional license required)*

F. The USP shall protect against potential database server failure and continue to run through standard off-the-shelf solutions.

G. The USP shall support up to one thousand instances of CSA connected at the same time. However, an unrestricted number of CSA can be installed at any time. *(Specifier, Maximum 5 with Standard; Maximum 10 with Professional; Unrestricted with Enterprise)*

H. The USP shall support an unrestricted number of logs and historical transactions (events and alarms) with the maximum allowed being limited by the amount of hard disk space available.

I. Roles-Based Architecture:

1. The USP shall consist of a role-based architecture, with each SSM hosting one or more roles.

2. Each role shall execute a specific set of tasks related to either core system, automatic license plate recognition (ALPR), video (VMS), or access control (ACS) functionalities, among many others. Installation shall be streamlined through the ability of the USP to allow administrators to:
   a. Deploy one or several SSM across the network prior to activating roles.
   b. Activate and deactivate roles as needed on each and every SSM.
   c. Centralize role configuration and management.
   d. Support remote configuration.
   e. Move roles over from one SSM to another.

3. Each role, where needed, shall have its own database to store events and role-specific configuration information.

4. Roles without databases, such as The Federation feature, Active Directory, and Global Cardholder Management, shall support near real-time standby without any third party failover software being required.

5. Directory Role:
   a. The Directory Role shall manage the central database that contains all the system information and component configuration of the USP.

   b. The Directory Role shall authenticate users and give access to the USP based on predefined user access rights or privileges, and security partition settings.

   c. The Directory Role shall support the configuration/management of the following components common to the ACS, ALPR, and VMS sub-systems:

      i. Security Partitions, users, and user groups

      i. Areas

      ii. Zones, input/output (IO) linking rules, and custom output behavior

      iii. Alarms. Schedules, and scheduled tasks

      iv. Custom events

      v. Macros or custom scripts

   d. The Directory Role shall support the configuration/management of the following components specific to VMS:

      i. Video servers and their peripherals (for example audio, IOs, and serial ports)

      ii. PTZ

      iii. Camera sequences

      iv. Recording and archiving schedules

   e. The Directory Role shall support the configuration/management of the following components specific to ACS:

      i. Door controllers, and input and output (IO) modules

      ii. Doors, Elevators, and Access rules

      iii. Cardholders and cardholder groups, credentials, and badge templates

   f. The Directory Role shall support the configuration/management of the following components specific to ALPR:

      i. ALPR units and cameras

      ii. Hotlists, permit lists, and overtime rules

6. The Video Archiver Role shall be responsible for managing cameras and encoders under its control and archiving.

7. The Media Router Role shall be responsible for routing video and audio streams across local and wide area networks from the source (for example DVS) to the destination (for example CSA).

8. The Access Manager Role shall be responsible for synchronizing access control hardware units under its control, such as door controllers and I/O modules. This role shall also be responsible for validating and logging all access activities and events when the door controllers and I/O modules are online.

9. The Automatic License Plate Recognition (ALPR) Role shall be responsible for synchronizing fixed ALPR units (cameras) and mobile ALPR applications under its control. The ALPR Role shall also be responsible for logging all ALPR activities and events.

10. The Zone Manager Role shall be responsible for managing all software zones (collection of inputs) and logging associated zone events. Zones shall consist of inputs from both access control and video devices.

11. The Health Monitoring Role shall be responsible for monitoring and logging health events and warnings from the various client applications, roles, and services that are part of the USP. This role shall also be responsible for logging events within the Windows Event Log and for generating reports on health statistics and health history.

12. The Data Ingestion Role shall be responsible for ingesting data from external sources in order to enhance the system reporting and dashboarding capabilities.

13. Optional Roles
    a. The Federation Role shall be responsible for creating a large virtual system consisting of hundreds or thousands of independent and remote ACS, VMS, and/or ALPR systems. *(Specifier, Enterprise only, additional license required)*

    a. The Global Cardholder Synchronizer Role shall be responsible for synchronizing cardholder and credential data between the local site and a central site. Synchronization between remote sites shall also be supported. *(Specifier, Enterprise only, additional license required)*

    b. The Active Directory Role shall be responsible for synchronizing user accounts and cardholder accounts with a Microsoft Active Directory server. *(Specifier, Professional and up, additional license required)*

    c. The Intrusion Manager Role shall be responsible for managing third party intrusion devices such as alarm panels and perimeter detection devices. This role shall also be responsible for logging all intrusion events in a database. *(Specifier, Professional and up, additional license required)*

    d. The Asset Manager Role shall be responsible for integrating and synchronizing with third party asset management systems and logging asset related events. This role shall also be responsible for supporting the execution of asset-related reports such as inventory reports and asset activity reports. *(Specifier, Professional and up, additional license required)*

    e. The Plug-in Manager Role shall be responsible for the communication between the USP and third party systems such as video analytics, access control, video, ALPR, and building management systems. *(Specifier, Professional and up, additional license required)*

a. *(Specifier, Professional and up, additional license required)*

f. The Web SDK Role shall be responsible for connecting the USP to any application or interface developed with the Web Service SDK. Applications developed with the Web Service SDK shall be platform independent and rely on the REST protocol for communications. *(Specifier, Professional and up, additional license required)*

b. The Communication Management Role shall be responsible for registering the SIP communication endpoints and for managing the call routing. *(Specifier, all packages, additional license required)*

J. Server Monitoring Service (Watchdog):

1. The USP shall include a Server Monitoring Service that continuously monitors the state of the Server Software Module (SSM) service.

2. The Server Monitoring Service shall be a Windows service that automatically launches at system startup, regardless of whether or not a user is logged into his account.

3. The Server Monitoring Service shall be installed on all PCs/servers running an SSM. In the event of a malfunction or failure, the Server Monitoring Service shall restart the failed service. As a last resort, the Server Monitoring Service shall reboot the PC/server should it be unable to restart the service.

2.28 USP ACCESS CONTROL, VIDEO, AND ALPR UNIFICATION

A. The Monitoring UI shall present a true Unified Security Interface for live monitoring and reporting of the ACS, VMS, and ALPR. Advanced live video viewing and playback of archived video shall be available through the Monitoring UI.

B. The Configuration UI shall present a true Unified Security Interface for the configuration and management of the ACS, VMS, and ALPR.

C. The user shall be able to associate one or more video cameras to the following entity types: areas, doors, elevators, zones, alarms, intrusion panels, ALPR cameras, and more.

D. It shall be possible to view video associated to access control events when viewing a report.

E. It shall be possible to view video associated to intrusion panel events when viewing a report.

F. It shall be possible to view video associated to ALPR events when viewing a report.

2.29 USP ALARM MANAGEMENT

A. The USP shall support the following Alarm Management functionality:

1. Create and modify user-defined alarms. An unrestricted number of user-defined alarms shall be supported.

2. Assign a time schedule or a coverage period to an alarm. An alarm shall be triggered only if it is a valid alarm for the current time period.

3. Set the priority level of an alarm and its reactivation threshold.

4. Define whether to display live or recorded video, still frames or a mix once the alarm is triggered.

5. Provide the ability to display live and recorded video within the same video tile using picture-in-picture (PiP) mode.

6. Provide the ability to group alarms by source and by type.

7. Define the time period after which the alarm is automatically acknowledged.

8. Define the recipients of an alarm. Alarm notifications shall be routed to one or more recipients. Recipients shall be assigned a priority level that prioritizes the order of reception of an alarm.

9. Define the alarm broadcast mode. Alarm notifications shall be sent using either a sequential or an all-at-once broadcast mode.

10. Define whether to display the source of the alarm, one or more entities, or an HTML page.

11. Specify whether an incident report is mandatory during acknowledgment.

B. The workflows to create, modify, add instructions and procedures, and acknowledge an alarm shall be consistent for access control, ALPR, and video alarms.

C. Alarms shall be federated, allowing global alarm management across multiple independent USP, ACS, and VMS systems.

D. The USP shall also support alarm notification to an email address or any device using the SMTP protocol.

E. The ability to create alarm-related instructions shall be supported through the display of one or more HTML pages following an alarm event. The HTML pages shall be user-defined and can be interlinked.

F. Alarm unpacking and packing shall be supported where all the entities associated to an alarm can be display in the Monitoring UI with the single click of a button.

G. The user shall have the ability to acknowledge alarms, create an incident upon alarm acknowledgement, and put an alarm to snooze.

H. The user shall be able to spontaneously trigger alarms based on something he or she sees in the system.

I. An alarm shall be configured in such a way that it remains visible until the source condition has been acknowledged.

J. The user shall be able to investigate an alarm without acknowledging it.

2.30 USP THREAT LEVELS *(SPECIFIER, ENTERPRISE ONLY, ADDITIONAL LICENSE REQUIRED)*

A. The USP shall support Threat Levels to dynamically change the system behavior to respond to critical events.

B. Threat Levels shall be activated and deactivated by the CSA operator with the right privilege.

C. Threat Levels shall be set on an area or on the entire system.

D. Threat Levels shall affect the system behavior by executing any action available in the USP such as: trigger output, start recording, block camera, override recording quality, arm zone, set a door in maintenance mode, and more.

E. The following specific actions shall be available with Threat Level:

1. Set minimum security clearance to restrict or permit access to cardholders on specific areas on top of the restrictions imposed by the access rules.

2. Set minimum user level to automatically log out user from the USP.

3. Set reader mode to change how the doors are accessed (for example card and PIN, or card or PIN).

F. A visible notification shall be displayed in all operator CSA when a Threat Level is activated.

2.31 USP ADVANCED TASK MANAGEMENT

A. USP shall support an infrastructure for managing Monitoring UI tasks used for live monitoring, day-to-day activities, and reporting.

B. Administrators shall be able to assign tasks and lock the operator’s workspace. The user management of their workspace shall be limited by their assigned privileges.

C. Operators shall be able save their tasks as either Public tasks or Private tasks and in a specific partition. Public tasks shall be available to all users. Private tasks shall only be available to the owner of the task.

D. Operators shall be able to share their tasks by sending them to one or more online users. Recipients shall have the option to accept the sent task.

E. Operators shall be able to duplicate a task.

2.32 USP REPORTING

A. The USP shall support report generation (database reporting) for access control, ALPR, video, and intrusion.

B. Each and every report in the system shall be a USP task, each associated with its own privilege. A user shall have access to a specific report task if they have the appropriate privilege.

C. The workflows to create, modify, and run a report shall be consistent for access control, ALPR, and video reports.

D. Reports shall be federated, allowing global consolidated reporting across multiple independent USP, ACS, VMS, and ALPR systems.

E. Access control and ALPR reports shall support cardholder pictures and license plate pictures, respectively.

F. The USP shall support the following types of reports:

1. Alarm reports

2. Video-specific reports (archive, bookmark, motion, and more)

3. Configuration reports (cardholders, credentials, units, access rules, readers/inputs/outputs, and more)

4. Activity reports (cardholder, cardholder group, visitor, credential, door, unit, area, zone, elevator, and more)

5. ALPR-specific reports (mobile ALPR playback, hits, plate reads, reads/hits per day, reads/hits per ALPR zone, and more)

6. Health activity and health statistics reports

7. Other types of reports, including visitor reports, audit trail reports, incident reports, and time and attendance reports

G. Generic Reports, Custom Reports and Report Templates:

1. The user shall the option of generating generic reports from an existing list, generating reports from a list of user-defined templates, or creating a new report or report template.

2. The user shall be able to customize the predefined reports and save them as new report templates. There shall be no need for an external reporting tool to create custom reports and report templates. Customization options shall include setting filters, report lengths, and timeout period. The user shall also be able to set which columns shall be visible in a report. The sorting of reported data shall be available by clicking on the appropriate column and selecting a sort order (ascending or descending).

3. All report templates shall be created within the Monitoring UI.

4. These templates can be used to generate reports on a schedule in PDF or Excel formats.

5. An unrestricted number of custom reports and templates shall be supported.

H. A reporting task layout shall consist of panes with settings (report length, filters, go and reset commands, etc.), the actual report data in column format, and a pane with display tiles. The user shall be able to drag and drop individual records in a report onto one or more display tiles to view a cardholder's picture ID, playback a video sequence, or an ALPR event.

I. The USP shall support comprehensive data filtering for most reports based on entity type, event type, event timestamp, custom fields, and more.

J. The reporting task shall have the ability to display results through graphics such as line charts, bar charts, stacked bar charts, doughnut charts, and pie charts.

K. The user shall be able to click on an entity within an existing report to generate additional reports from the Monitoring UI.

L. The USP shall support the following actions on a report: print report, export report to a PDF/Microsoft Excel/CSV file, export the graphics chart in JPG/PNG, and automatically email a report based on a schedule and a list of one or more recipients.

2.33 USP DASHBOARDS

A. The USP shall support the ability to create dashboards.

B. Operators shall be allowed to view dashboards if they are granted the appropriate privilege. Modification to the dashboards should also be allowed to users granted the appropriate privilege.

C. Dashboards in the system shall be a USP task. A user shall have access to a specific dashboard task if they have the appropriate privilege.

D. Dashboards shall be shaved either in a private folder or a public folder.

E. A dashboard shall consist of a canvas with various widgets displayed on the canvas. All widgets should offer the ability to specify location and size to the widget, a title to the widget, a background color to the widget, and the ability to refresh periodically the content of the widget.

F. Dashboard widget types shall be:

1. Image: provides the ability to display an image (JPG, PNG, GIF, BMP) on a dashboard.

2. Text: provides the ability to display a text on a dashboard. The text style shall be configurable, so font, size, color, and alignment can be specified by the user.

3. Tile: provides the ability to display any entity of the USP inside of a tile.

4. Web page: provides the ability to display a URL on a dashboard.

5. Entity Count: provides the ability to display the total number of a specific entity type in the USP.

6. Reports: provides the ability to display the results of any saved reports in the system. The results shall be displayed either by showing the total number of results in the report, a set of top results from the report, or a visual graph from the data returned by the report.

G. It shall be possible to extend the widgets of a dashboard using the SDK. This will provide the ability to develop custom widgets to the system.

H. The USP shall support the following actions on a dashboard: print dashboard, export dashboard to PNG file, and automatically email a report based on a schedule and a list of one or more recipients.

2.34 USP Federation feature: Monitoring of Remote Systems *(Specifier, Enterprise only, additional license required for each federated sites and entities)*

A. The USP shall support the concept of a Federation feature for access control, video, and ALPR.

B. The Federation feature shall allow multiple independent USP systems (Federated systems) to be unified into a larger virtual system (the Federation feature). This shall facilitate the global monitoring of multiple independent USP systems.

C. The Federation feature shall support the unification of multiple independent video surveillance systems or VMS.

D. The Federation feature shall support the unification of multiple independent access control systems or ACS.

E. The Federation feature shall support the unification of multiple independent license plate recognition systems or ALPR.

F. Entities that shall federated and monitored centrally from the Federation feature shall include alarms, areas, cameras, cardholders and cardholder groups, credentials, doors, elevators, ALPR events, and zones (monitored inputs).

G. The Federation feature shall support a cloud-based deployment, whereby the service and infrastructure will be updated automatically and provisioned by the service provider, without need for on-site hardware.

H. The Federation feature shall support Global Alarm Management from the Monitoring UI for access control, video, and ALPR.

I. The Federation feature shall support Global Report Generation from the Monitoring UI for access control, video, and ALPR.

J. The Federation feature shall support dozens of operator actions on remote (federated) entities from the Monitoring UI (for example generating a global report taking into account events from multiple independent sites or acknowledging remote alarms).

2.35 USP ZONE MANAGEMENT

A. The USP shall support the configuration and management of zones for input point monitoring via the Zone Manager Role. A user shall be able to add, delete, or modify a zone if they have the appropriate privileges.

B. A zone shall monitor the status of one or more inputs points. Zone monitoring or input point monitoring shall be possible through the use of a controller and one or more input modules. Inputs from video cameras or video encoders shall also be accessible via a zone.

C. Depending on the hardware installed, supervised inputs shall be supported. Depending on the input module used, both 3-state and 4-state supervision shall be available.

D. A schedule shall be defined for a zone, indicating when the zone will be monitored.

E. Custom Events shall provide full flexibility in creating custom events tailored to a zone. Users shall be able to associate custom events to state changes in monitored inputs.

F. The ACS shall support one or more cameras per zone. Video shall then be associated to zone state changes.

G. Input/Output (IO) Linking

1. Zone management shall support Input/Output (IO) Linking. I/O Linking shall allow one or more inputs to trigger one or more outputs.

2. I/O Linking shall be available in offline mode when communication between the server and hardware is not available.

3. Custom Output Behaviors shall provide full flexibility in creating a variety of complex output signal patterns: simple pulses, periodic pulses, variable duty-cycle pulses, and state changes.

4. Through the “trigger an output” action, the ACS shall support the triggering of outputs with custom output behaviors.

2.36 USP USER AND USER GROUP SECURITY, PARTITIONS, AND PRIVILEGES MANAGEMENT

A. The USP shall support the configuration and management of users and user groups. A user shall be able to add, delete, or modify a user or user group if they have the appropriate privileges.

B. The USP shall support user authentication with claims-based authentication using external providers. External providers shall include:

1. ADFS (Active Directory Federation Services)

2. Azure Active Directory (through OpenID Connect)

3. Ping Identity (through OpenID Connect)

4. KeyCloak (through OpenID Connect)

5. Other Open ID Connect / SAML2 authentication agents

C. Common access rights and privileges shared by multiple users shall be defined as User Groups. Individual group members shall inherit the rights and privileges from their parent user groups. User group nesting shall be allowed.

D. User privileges shall be extensive in the USP. All configurable entities for the USP, including access control, video, and ALPR shall have associated privileges.

E. Specific entities, such as cardholders, cardholder groups, and credentials shall include a more granular set of privileges, such as the right to access custom fields and change the activation or profile status of an entity.

F. Partitions:

1. The USP shall limit what users can view in the configuration database via security partitions (database segments). The administrator, who has all rights and privileges, shall be allowed to segment a system into multiple security partitions.

2. All entities that are part of the USP can be assigned to one or more partitions.

3. A user who is given access to a specific partition shall only be able to view entities (components) within the partition to which they have been assigned. Access is given by assigning the user as an accepted user to view the entities that are members of a particular partition.

4. A user or user group can be assigned administrator rights over the partition.

G. It shall be possible to specify user and user group privileges on a per partition basis.

H. Advanced logon options shall be available such as dual logon and more.

I. It shall be possible to specify an inactive period for the Monitoring UI after which time the application shall automatically lock, while still preserving access to currently displayed camera feeds.

J. It shall be possible to review used permissions and determine:

1. For any entity in the system, which user group or user can view or modify it.

2. For any user group or user in the system, what are its privileges.

3. For any privilege in the system, which used group or used is allowed to perform the underlying action.

2.37 USP EVENT/ACTION MANAGEMENT

A. The USP shall support the configuration and management of events for video and ALPR. A user shall be able to add, delete, or modify an action tied to an event if he has the appropriate privileges.

B. The USP shall receive all incoming events from one or more ACS, VMS, and/or ALPR. The USP shall take the appropriate actions based on user-define event/action relationships.

C. The USP shall receive and log the following events:

1. System-wide events

2. Application events (clients and servers)

3. Area, camera, door, elevator, and ALPR events (reads and hits)

4. Cardholder and credential events

5. Unit events

6. Zone events

7. Alarm events

8. ALPR events

9. First Person In and Last Person Out events and antipassback events

10. Intrusion events

11. Asset management events

12. Health monitoring events.

D. The USP shall allow the creation of custom events.

E. The USP shall have the capability to execute an action in response to an access control, video, and ALPR event.

F. The USP shall allow a schedule to be associated with an action. The action shall be executed only if it is an appropriate action for the current time period.

2.38 USP SCHEDULES AND SCHEDULED TASKS

A. Schedules

1. The USP shall support the configuration and management of complex schedules. A user shall be able to add, delete, or modify a schedule if they have the appropriate privileges.

2. The USP shall provide full flexibility and granularity in creating a schedule. The user shall be able to define a schedule in 1-minute or 15-minute increments.

3. Daily, weekly, ordinal, and specific schedules shall be supported.

B. Scheduled Tasks

1. The USP shall support scheduled tasks for access control, video, and ALPR.

2. Scheduled tasks shall be executed on a user-defined schedule at a specific day and time. Recurring or periodic scheduled tasks shall also be supported.

3. Scheduled tasks shall support all standard actions available within the USP, such as sending an email or emailing a report.

2.39 USP MACROS AND CUSTOM SCRIPTS

A. The USP shall enable users to automate and extend the functionalities of the system through the use of macros or custom scripts for access control, video, and ALPR.

B. Custom macros shall be created with the USP Software Development Kit (SDK).

C. A macro shall be executed either automatically or manually.

D. In the Monitoring UI, a macro shall be launched through hot actions.

2.40 USP DYNAMIC GRAPHICAL MAPS (DGM)

A. The USP shall support mapping functionality for access control, video surveillance, intrusion detection, ALPR, and external applications.

B. The USP shall provide a map centric interface with the ability to command and control all the USP capabilities from a full screen map interface.

C. It shall be possible to span the map over all screens of the USP client station. In the scenario where the map is spanned over all the screens of the USP client station it shall be possible to navigate the map including pan and zoom, and the map's moves shall be synchronized between all screens. Spanning the map over multiple screens must provide the same command and control capabilities than in a single screen display.

D. The DGM shall support the following file format and protocol for importing map background:

1. PDF

2. JPG

3. PNG

4. Web Tile Map Service (WMTS) and Web Map Service (WMS) defined by the Open Geospatial Consortium (OGC)

5. BeNomad

6. AutoCAD (DWG & DXF)

E. The DGM shall provide the following online map providers for use as map background and provide the ability to manage their service license if they require one:

1. Google Map, aerial, terrain (Licensed)

2. Bing Map, aerial, satellite, hybrid (Licensed)

3. ESRI ArcGIS (Licensed)

4. OpenStreet Map aerial (Licensed)

5. OVI hybrid

F. It shall be possible to configure a mixed set of maps made of GIS, online providers and private imported files and link them together.

G. The DGM shall provide the ability to display all native entities of the USP including:

1. Cameras, fix, and PTZ
2. Doors
3. Camera sequences
4. Areas
5. Intrusion areas
6. Intrusion zones
7. License Plate Recognition cameras
8. Digital inputs
9. Digital outputs
10. Intercoms
11. Alarms
12. Macros
13. Police Car Patrollers

H. The DGM shall provide the ability to draw and display information over the map in the form of:

1. Vectoral shapes: line, rectangles, polygons, ellipse
2. Pictures
3. Text

I. The DGM shall provide the ability to display any type of third party entities integrated through an SDK. (Specifier, Plan Manager Standard and up, additional license required)

J. The DGM shall provide the ability to display layer of information in Keyhole Markup Language (KML) format.

K. The DGM shall provide the ability to the operator to manage layers of entities displayed over the map, being able to turn them on and off and changing the superposition order.

L. The DGM shall provide the ability to import data layers from one or more ESRI ArcGIS servers.

M. The DGM shall provide the operators with the ability to manage layers that are imported from ESRI ArcGIS. The operators shall be able to turn the layers on and off, as well as sort the layers.

N. The DGM shall offer built-in map data backup and restore for both map backgrounds and layers of entities.

O. The DGM shall provide the ability to import configurations from an external file such as:

1. AutoCAD layer for objects

2. CSV, Excel file

P. The DGM shall offer failover capabilities.

Q. The DGM shall scale up to several thousands of entities on a single map and hundreds of maps.

R. The DGM shall provide a means to update a map background without affecting the map object configuration.

S. The DGM shall offer a user-friendly graphical map designer to configure the maps.

T. The DGM shall provide user friendly and intuitive navigation that includes:

1. The ability to create hierarchies of maps to facilitate navigation within and between various sites and buildings.

2. The ability to define favorites for recurrent position recall.

3. The possibility to create links between maps. The map links shall allow the link from one map to multiple maps representing the floors of a building. Navigating between floors of a building shall keep the level of the map.

4. A common user experience regarding navigation into the map for both GIS and private maps. *(Specifier, Plan Manager Advanced required for GIS)*

U. It shall be possible to monitor the state of entities on the map. It shall be possible to customize the icons of any entities represented on the map.

V. The DGM shall offer the ability to optionally set a graphical display notification of the motion detection.

W. The DGM shall offer a smart selection tool to access the video. By clicking the location the user wants to see, the DGM will automatically select the cameras that can see this location and move the PTZ towards that location. This smart selection tool shall take obstacles into consideration and not display cameras that cannot see the location because of a wall.

X. It shall be possible to select a location by drawing a zone of interest on the DGM, and to display all the entities that are part of that zone of interest at once.

Y. The user shall be able to select and display the content of multiple USP entities on the map in pop-up windows.

Z. The user shall be able to move, resize, and pin the USP entity pop-up windows to the map.

AA. It shall be possible to access live and playback video from the map.

BB. It shall be possible to monitor all entity event notifications from the DGM. Users shall be able to turn notifications on and off per entity.

CC. The DGM shall offer the ability to fully operate alarm monitoring. It shall be possible to:

1. Center the map on entities related to the alarm.

2. Visualize the Alarm notifications on the map and access the related videos from the map.

3. Trigger and receive alarms.

4. Act on the alarm from the DGM, including acknowledgements, forwarding, and investigation.

5. Visualize that an alarm occurred in an underlying linked map.

DD. The DGM shall provide the following search capabilities:

1. Search and center by entity name.

2. From the Display of an entity in the USP, locate the entity on the map and offer the ability to select another one close-by.

3. By street address, city, landmark, point of interest (using geocoder license from Google, ESRI, or other provider).

EE. Any update of map content by an administrator shall be immediately and dynamically pushed to all DGM users.

FF. The DGM shall support the use of GIS maps or private maps or a combination of both for map background. *(Specifier, Plan Manager Advanced required for GIS)*

GG. The DGM shall be compatible with any GIS compliant maps with the OGC and supporting WMTS and WMS. This includes, but is not limited to, ESRI maps. The DGM shall allow the selection of the appropriate GIS layers. *(Specifier, Plan Manager Advanced required for GIS)*

HH. The DGM shall provide an intuitive built-in map designer for entity positioning on the map using drag and drop. Any configuration shall be graphic.

II. It shall be possible to edit and configure multiple map objects at once.

JJ. All map design modifications shall be logged in an audit trail.

KK. Various actions shall be available within maps for execution through simple and intuitive double-click, right-click, or drag-and-drop functionality. Examples of actions available through maps shall include unlocking a door and acknowledging an alarm.

LL. Through the following functionality, the DGM shall allow the management of USP alarms from the map: *(Specifier, Plan Manager Standard and up, additional license required)*

1. Locate on the map entities related to the alarm.

2. Display entities of the alarm with a specific icon, color, transparency level, and blinking rate.

3. List, select, and locate alarms.

4. Auto center the map on the highest priority alarm.

5. Handle the alarm from the map, including acknowledgement, forwarding, and investigation.

6. All map containers, such as hotspots or map links shall reflect the alarm status of the contained entities.

MM. It shall be possible to add advanced functionality to maps object using the SDK. Any functionality available through the USP SDK shall be available within maps. *(Specifier, Plan Manager Standard and up, additional license required)*

NN. The DGM shall offer lasso tools for:

1. Displaying entities at one location through a single action.

2. Triggering an action on all entities at one a location in a single click.

3. Editing multiple entities at one location simultaneously.

OO. The DGM shall allow the display of USP entities selected from the map on a remote monitor (video wall). *(Specifier, Plan Manager Standard and up, additional license required)*

PP. The DGM shall provide the ability to search within the map by entity name.

QQ. The DGM shall allow the use of KML overlay map information for both GIS and private maps. Movable objects shall be supported using KML. *(Specifier, Plan Manager Advanced only, additional license required)*

RR. The Contractor shall provide licenses for each entity that is required to be shown on the graphical maps. *(Specifier, licenses are sold in packs based on quantity of entities, specify a site license or unlimited after 1,000 entities)*

2.41 USP AUDIT AND USER ACTIVITY TRAILS (LOGS)

A. The USP shall support the generation of audit trails. Audit trails shall consist of logs of operator/administrator additions, deletions, and modifications.

B. Audit trails shall be generated as reports. They shall be able to track changes made within specific time periods. Querying on specific users, changes, affected entities, and time periods shall also be possible.

C. For entity configuration changes, the audit trail report shall include detailed information of the value before and after the changes.

D. The USP shall support the generation of user activity trails. User activity trails shall consist of logs of operator activity on the USP such as login, camera viewed, ALPR event viewed, badge printing, video export, and more.

E. The ACS shall support the following actions on an audit and activity trail report: print report and export report to a PDF/ Microsoft Excel/CSV file.

2.42 USP INCIDENT REPORTS

A. Incident reports shall allow the security operator to create reports on incidents that occurred during a shift. Both video-related and access control-related incident reports shall be supported.

B. The operator shall be able to create standalone incident reports or incident reports tied to alarms.

C. The operator shall be able to link multiple video sequences to an incident, access them in an incident report, and change the date or time of the sequences later on.

D. It shall be possible to create a list of Incident categories, tag a category to an incident, and filter the search with the category as a parameter.

E. Incident reports shall allow the creation of a custom form on which to input information on an incident.

F. Incident reports shall allow entities, events, and alarms to be added to support at the report's conclusions.

G. Incident reports shall allow the use of a custom logo, the default Mission Control logo or no logo at all.

2.43 USP DATA INGESTION

A. USP shall allow the possibility to import external data from outside sources to enhance unification of data sources within the USP.

B. Each data source shall be defied by a set of fields and field types that describe the data source. Field types shall be:

1. String

2. 32-bit and 64-bit integer

3. Floating point number

4. Boolean

5. Timestamp

6. Binary (in a file or base 64)

C. The visualization of each data point from a data source shall be configurable to determine what fields from the data should be displayed. The configuration of each field should be:

1. Which fields are displayed or hidden

2. What order are the fields displayed

3. A label to specify the name of the filed (to have a key:value format)

4. An option to specify how to display the field (text value, image, clipboard value, hyperlink to a web page, hyperlink to an entity in the system, sound file)

D. A privilege should be available for each data source to allow or deny access to specific users aand user groups of the USP.

E. Ingested data shall be available in the USP reporting system.

F. Ingested data shall be available to display in the USP dashboards.

2.44 USP THIRD PARTY INTEGRATION

A. Microsoft Active Directory Integration: *(Specifier, Professional and up, additional license required)*

1. The USP shall support a direct connection to one or multiple Microsoft Active Directory server via the Active Directory Role(s). Active Directory integration shall enable the synchronization of information from the Active Directory server to the USP.

2. Active Directory integration shall permit the central management of the USP users, user groups, cardholders, and cardholder groups.

3. The USP shall support ADFS for user login.

4. The USP shall be able to connect to and synchronize data from multiple Active Directory servers (up to 10).

5. The USP shall support Azure AD for cardholder synchronization.

6. The USP shall support synchronizing Active Directory Universal Groups as well as security groups belonging to other domains within the same forest.

7. The USP shall support Microsoft Active Directory encryption using LDAP SSL.

8. When enabled, Active Directory shall manage user logon to the USP client applications through the user's Windows credentials. Logging on to the USP shall utilize native Active Directory password management and authentication features.

9. It shall be possible to synchronize the following USP entities and their information from Active Directory with the USP:
   c. Users (username, first and last names, email address, and more)

   d. User groups (user group name, description, and group email address)

e. Cardholders (first and last names, description, email, picture and more)

f. Cardholder groups (cardholder group name, description, and group email address)

g. Active Directory attributes to USP custom fields

10. When enabled, the addition, removal, or suspension of a user's Windows account in Active Directory shall result in the creation, deletion, or disabling of the equivalent user account in the USP.

11. When enabled, the addition, removal, or suspension of a user's Windows account in Active Directory shall result in the creation, deletion, or disabling of the equivalent cardholder account in the USP.

12. Supported synchronization methods for additions, modification, and deletions of synchronized entities shall include on first logon (users only), manual synchronization, and scheduled synchronization.

13. The USP shall support user connections across independent organizations by connecting to an external identity provider using claims-based authentication such as ADFS (Active Directory Federation Services), Azure Active Directory, other OpenID Connect & SAML2 providers.

B. Intrusion Detection Integration: *(Specifier, Standard, Professional and up, additional license required - for an extended list, refer to the Supported Plugins in Security Center document)*

1. The USP shall integrate with third party intrusion panels and devices via an Intrusion SDK. The Intrusion Manager Role shall manage communications with the intrusion panels. Communications with intrusion devices shall be over serial communications and/or an IP network.

2. Integration with intrusion panels shall be possible outside the release cycle of the USP. It shall be possible to add new integrations at any point in time.

3. Functionality available via the integration of intrusion devices with the USP shall include the following (where supported by the intrusion panel):
   a. Arm and disarm intrusion devices (manually, on schedule, or following a USP event)

   b. Activate or trigger intrusion device outputs

   c. View intrusion events and alarms

   d. Monitor the status, including arming status, of the intrusion devices

   e. Video verification of intrusion events and alarms with video panels

   f. Create USP zones using intrusion device inputs

4. Currently supported intrusion panels include:
   a. Bosch G Series panels

   b. Bosch Map 5000

c. DSC Power Series panels

d. DMP XR Series panels

e. Honeywell Galaxy Dimension and Flex panels

f. Vanderbilt SPC

g. UTC Advisor Master and Advanced

5. Additional intrusion devices supported include:
   a. Buytime

   b. Alarm Panel Receiver

   c. Southwest Microwave RPMII

C. Third Party Access Control Systems: *(Specifier, Professional and up, additional license required, for extended list please refer to the Security Center supported Plugins guide)*

1. The USP shall integrate with third party access control software via the SDK. Communications with access control software shall be over an IP network, and should not support administrative tasks such as cardholder management.

2. Integration with access control software shall be possible outside the release cycle of the USP. It shall be possible to add new integrations at any point in time.

3. Functionality available via the integration of access control software with the USP shall include the following (where supported by the access control solution):

   a. Synchronize access control entities and receive associated events and states within the USP, including:
      1) Cardholders and access rights
      2) Visitors
      3) Readers and doors
      4) Alarms
      5) Inputs and outputs
   d. Monitor access control events

   e. Monitor and acknowledge access control alarms

   f. Trigger actions and outputs in the access control software using hot actions and event-to-actions

   g. Lock and unlock doors in the access control software

   h. Video verification of access control events and alarms

   i. Configure event-to-actions using the access control events and alarms

   j. Generate Security Center reports using the access control data

   k. View and monitor states of door entities in the USP maps

2. Currently supported access control manufacturers include:
    a. Tyco Software CCURE
    b. UTC Lenel Onguard
    c. Amag Symmetry
    d. Siemens Sipass
    e. AssaAbloy ARX

D. Third Party Destination Dispatch Systems: *(Specifier, Professional and up, additional license required, for extended list please refer to the Security Center supported Plugins guide)*

1. The USP shall integrate with third party destination dispatch (elevator control) software via the SDK. Communications with destination dispatch software shall be over an IP network.

2. Integrating with destination dispatch software shall be possible outside the release cycle of the USP. It shall be possible to add new integrations at any point in time.

3. Functionality available via the integration of destination dispatch software with the USP shall include the following (where supported by the destination dispatch solution):
    a. Destination dispatch entity creation and reception of associated events and state within the USP, including:
        i. Floors and landings
        ii. Elevator cars (front/rear doors) and kiosks
        iii. Cardholders and credentials (if applicable)
    b. Monitor destination dispatch events.
    c. Trigger manual dispatch actions.
    d. Video verification of destination dispatch events.
    e. Configure event-to-actions using the destination dispatch events.
    f. Generate Security Center reports using the destination dispatch data.
    g. Support multiple readers:
        i. Kiosk internal readers
        ii. USP readers
    h. Kiosk advanced modes and passenger types.
2. Currently supported destination dispatch manufacturers include:
    a. Otis Compass
    b. Thyssenkrupp
    c. Schindler

d. MCE

E. Asset Management Integration: *(Specifier, requires an additional license, Professional and up)*

1. The USP shall integrate with third party asset management systems via the Asset Management Role.

2. Communications with asset management solutions shall be over an IP network (via software communications).

3. Functionality available via the integration of asset management systems with the USP shall include the following (where supported by the asset management systems):

a. Synchronize asset management system assets with USP asset entities.

b. Live monitoring of asset-related activity events, health events, and activity (asset online, asset offline, asset moves, or low battery).

c. Synchronization of asset management alarms with Security Center alarms.

d. Viewing video tied to asset-related activity and alerts within monitoring and reporting tasks.

e. Acknowledging alarms in Security Center which acknowledges alerts in the asset management system and vice versa.

f. Real-time tracking of asset locations on a per area basis.

g. Asset Management Inventory reporting task that details the current location (area) of an asset.

h. Asset Activity reporting task that provides a historical review of asset-related events and activity.

4. Currently supported asset management systems include:

a. Deister Key management

b. Morsewatchmans

c. TRAKA

F. Additional Third Party Integrations

1. The USP shall support multiple approaches to integrating third party systems. These shall include: Software Development Kits (SDKs), REST-based Web Service SDKs, RTSP Service SDKs, and more. *(Specifier, Professional and up, SDK package and license required)*

2. The USP architecture shall support the addition of new connectors to integrate to third party system integration, such as: *(Specifier, refer to the website for how these are licensed, for an updated list of available Third Party Integrations, please refer to the supported plugin guide)*

a. Third party video systems

b. Third party access control systems

c. ALPR integrations with pay stations, permit vendors, pay-by-phone vendors, and ticketing vendors

d. Building management systems

e. Access Control ecosystem (such as IDscanner, card synchronization, Guardtour, Morpho Biometrics)

f. Transaction monitoring (POS, Barcode scanning, ATM)

g. Industrial IoT (Modbus, BACnet, OPC, SNMP)

h. Industrial Protocol Interface (BACnet, Modbus)

i. Videowall (Barco, Eizo)

j. Human resource management systems (HRMS)

k. Autonomous Drone Integration

l. Intelligent Keys (Salto SVN, Medeco XT, CLIQ)

m. Gunshot Detection (Shot Spotter, Guardian GunShot)

n. Dynamic Logbook

o. Facial Recognition Framework

p. Real-time Location Services - RTLS (HID)

2.45 USP SOFTWARE DEVELOPMENT KIT (SDK) *(SPECIFIER, PROFESSIONAL AND UP, ADDITIONAL LICENSE REQUIRED)*

A. A USP SDK shall be available to support custom development for the platform.

B. The SDK shall include functionalities specific to the embedded automatic license plate recognition (ALPR), access control (ACS), and video (VMS) systems.

C. Integration with external applications and databases shall be possible with the SDK.

D. The SDK shall support an API to allow third party access control hardware integration.

E. The SDK shall enable end-users to develop new functionality (user interface, standalone applications, or services) to link the USP to third party business systems and applications such as Badging Systems, Human Resources Management Systems (HRMS), and Enterprise Resource Planning (ERP) systems.

F. The SDK shall be based on the .NET framework.

G. The SDK shall support dynamic or transactional updates to the USP configuration. It shall also support change notification of USP entity configuration.

H. The SDK shall provide an extensive list of programming functions to view and/or configure core entities such as: users and user groups, alarms, custom events, and schedules, and more.

I. The SDK shall provide an extensive list of programming functions to view and configure ACS, VMS, and ALPR.

J. The SDK shall provide an extensive list of programming functions to view and configure most ACS entities such as cardholders, cardholder groups, visitors, credentials, access rules (modify only), and custom fields.

K. The SDK shall be able to receive real time events from the following USP entities: users and user groups, areas, zones, cameras, video units, doors, door controllers (units), elevators, cardholders, cardholder groups, and credentials.

L. The SDK shall be able to query the history of events for areas, cameras, zones, alarms, cardholders, credentials, visitors, doors, query license plate read events, license plate hit events, generate a license plate hits report, generate a license plate reads report.

M. The SDK shall support the following alarm functions: view alarms in real time, acknowledge alarms, change priority, and change recipient.

2.46 PHYSICAL IDENTITY AND ACCESS MANAGEMENT SYSTEM (PIAM)

A. The PIAM shall be an enterprise class Physical Identity and Access Management System. It shall fully integrate within a Unified Security Platform (USP). The USP shall allow the seamless integration of the PIAM with an Access Control System (ACS).

B. The PIAM system shall be highly scalable for global deployments.

1. The PIAM system to support configurations with multiple Access Control systems.

2. The PIAM system shall support licensing up to:

a. 1,000,000 unique identities

b. 500 sites

c. 1,000 visitor kiosks

d. 1,000,000 visits yearly

3. Additionally, each account shall support up to:

a. 10,000 roles, with up to 100,000 identities in one role

b. 200,000 areas

4. The PIAM system shall support a variety of identity management functionalities, including but not limited to:

a. Programmable management of cardholders for automatic access assignment

b. Manual management of cardholders via workflows

C. Manufacturer:

1. Genetec ClearID

D. Certification:

1. The PIAM system shall be an ISO/IEC 27001:2013 certified Information Security Management System.

2.47 ARCHITECTURE

A. Globally distributed cloud architecture:

1. Microsoft Azure

a. Distributed global services
1) Policies and rules
2) User authentication
3) Area management
4) API
5) Self-service portal
6) Workflows engine
7) Email notification
8) Automatic provisioning

b. Regional Services
1) Identities and cardholder credentials are stored at the closest Azure datacenter to the user.
2) Data is distributed across siloed, independent repositories.

c. Local sites
1) Security Center Synergis™
2) Local custom fields
3) Plugins

d. High availability
1) 99.9% SLA
2) Geo-redundant data storage

2. Security Controls

a. Data encryption
1) AES 256

2) RSA 2048
3) Symmetric keys and asymmetric keys
   a) Keys are managed using Azure Key Vault
   b) FIPS 140-2 Level 2 validated HSMs

b. Data integrity
   1) Digital signatures based on SHA 512 with RSA 2048 are used to validate data.

c. Communication encryption
   1) Hypertext Transfer Protocol Secure (HTTPS) protocol TLS 1.2
   2) Transport Layer Security (TLS) certificates

d. Zero-trust architecture
   1) Customer data is segmented into microservices, which only have the minimum data access requires to perform that task.
   2) All communication between microservices is encrypted and digitally signed.

e. Service monitoring
   1) Controls are updated based on various security threat feeds and services.
   2) System is running constant metrics analysis, including synthetic transactions to emulate user activity.
   3) Systems are monitored by and notify development and operations teams of any issues.

f. User authentications
   1) Azure Active Directory (AD) B2B by default
   2) Option for federation of existing AD user identities through Azure AD B2B or OpenID Connect to provide Single Sign-On (SSO).
   3) Also support:
   4) OneLogin
   5) Okta
   6) Auth0
   7) Ping
   8) MyID

3. Clear ID Plugin

   a. Installed on a Security Center server to integrate Genetec ClearID and Security Center, providing communications between Synergis™ and ClearID Cloud Services.

   b. Plugin is also installed on a Config Tool workstation, which allows that administrator to create and configure the plugin role, and configure database settings and connection settings for ClearID.

   c. Plugin will update automatically if an internet connection is available when a new release is published by Genetec.

2.48 MANAGEMENT

A. Identity management

1. Identity Information:

    a. General personal information

    b. Company information

    c. Supervisors for this identity

    d. System shall synchronize identity information with the following sources:
        1) CSV file exported from and HR database
        2) SQL Server or Oracle database
        3) Microsoft Active Directory via LDAP

    e. System shall have externally available Identity REST API for synchronization of identity information from external sources

2. Access Control

    a. Access period
        1) Date of activation
        2) Date of expiration

    b. Provisioning attributes

    c. Associated cardholders

3. User Permissions

    a. Administrator can enable or disable user access to web portal

    b. Administrator can assign user types:
        1) Administrator
        2) User

4. Visitor Management

    a. Administrator can grant user permissions to invite visitors to specific sites

B. Area Management

1. Area Management

    a. Areas owners and approvers can view, add, and remove roles from areas.

    b. Managers can assign management to one or more area owners.

    c. Area owners and approvers can delegate their tasks to someone else in the organization while they are away on leave (Example: vacation leave, sick leave, etc.). The delegate will have the same set of permissions as the delegator and can manage the tasks on their behalf.

2. Access Control

a. Area owners and approvers can view, add, and remove people from areas.

b. Area owners and approvers can grant temporary access to roles.

c. Employee supervisor can be required to approve employee access request.

d. Approvers can process access requests using the ClearID web portal.

e. Employee supervisors can delegate their tasks to someone else in the organization while they are away on leave. The delegate will have the same set of permissions as the delegator and can manage the tasks on their behalf.

3. User Permissions

a. Area owners, approvers, and supervisors can approve or deny access requests.

b. Permanent cardholders can request temporary access to areas.

c. Permanent cardholders can invite visitors.

C. Role management

1. Role Management

a. Assign the management roles or cardholder group to one or more role owner.

b. Role managers can add or remove people from their groups.

c. Role owners can assign access to an area for their entire group.

d. Automatic provisioning and synchronization of cardholder groups for multiple sites.

e. Role managers and owners can manage roles in their domain using the ClearID web portal.

f. Role managers and owner can delegate their tasks to someone else in the organization while they are away on leave. The delegate will have the same set of permissions as the delegator and can manage the tasks on their behalf.

2. Role-based provisioning

a. Access can be granted or revoked based on employees' locations.

b. Access can be granted or revoked based on specific roles or job titles in the organization, or who they report to.

c. Access can be granted or revoked based on completion of specific training or possession of required certificates.

d. Access can be granted or revoked based on a list of custom attributes synchronized from an external source.

e. A grace period can be configured to delay the revocation of access by a configurable time period following a change in attributes.

D. Site Management

1. Site Management

a. Global management of cardholders for multiple Synergis™ systems.

b. Time zone support (built-in).

c. Site owners can delegate their tasks to someone else in the organization while they are away on leave. The delegate will have the same set of permissions as the delegator and can manage the tasks on their behalf.

2. Access Control

a. Automatic synchronization of permanent credentials when someone travels between sites.

b. Synchronization of cardholders only happens when cardholders are changed, if cardholder has access on that Synergis™ system.

c. Synchronization of cardholder groups only happens when cardholder groups are changed, if the cardholder group has access on that Synergis™ system.

E. Visitor Management

1. Visitor Management

a. Manual or CSV import pre-registration of visitors using the web portal.

b. Visitor approval workflow can be customized based on the area selected.

c. Visit event approval workflow options can be customized at the site level.

d. Visit event approvers can be assigned to approve a visit event.

e. Visit event approvers can delegate their tasks to someone else in the organization while they are away on leave. The delegate will have the same set of permissions as the delegator and can manage the tasks on their behalf.

f. Automatic provisioning of visitors with the required areas automatically assigned.

g. Visitor check-in using Security Desk.

h. System shall support the configuration of self-service kiosks for visitor check-in.
   1) Kiosk shall be based on iPad hardware.
   2) Tabletop and floor stand kiosk options can be available.
   3) Kiosk supports visitor pre-registration and on-the-spot registration.
   4) Kiosk supports English, French, Spanish, Dutch, German, Italian, and Portuguese languages.

5) Visitors shall be able to check in with a government ID (over 200 supported IDs) or with an email address.
6) Refer to ClearID documentation for supported country IDs.
7) QR code data can be sent to visitors in a Visitor Confirmation email prior to the visit. Kiosk shall have the ability to process the QR code data for the purpose of visitor check-in.
8) Kiosk shall have the ability to print temporary visitor badge with QR code credentials.
9) An SMS alert can be sent to the host when a visitor completes their check in.
10) Kiosk supports Brother QL-820NWB thermal printer.

i. Email notifications when visit request is created.

j. Email notifications when visit request is approved or denied.

k. Capture and report the visit reason.

l. Email invitation sent to visitor with a meeting invite (iCalendar format – RFC 2445), site details, and optional QR code for file attachments.

m. SMS notifications and email sent to visitor host when visitor checks in.

n. Refer to ClearID documentation for supported country codes.

2. Access Control

a. Paper badges and temporary credentials for visitor management.

b. 40-bit QR code sent to visitors can be utilized as a credential in Security Center.

c. Access to specific areas can be restricted on a per-credential basis.

d. Visitor escort can be required, with up to 10 unique visitor hosts.

e. Approvers can process visitor access requests using the ClearID web portal.

3. Platform Management

a. Corporate logo for portal and email notifications

b. Cloud platform

c. HTML5 web interface with mobile support

d. REST API available to automate any functions available in the web portal

4. Security/Authentication Management

a. Support multi-factor authentications for users using OpenID to connect

b. Single Sign-On using Microsoft Office 365

c. Single Sign-On using Microsoft Azure Active Directory (AD)

d. ISO 27001:2013 certification

e. AES-256 encryption with RSA 2048 bits

f. System undergoes annual penetration testing by external accredited security firm

2.49 CARD READERS

A. HID Card reader

1. HID® iCLASS SE® R40

2. Bluetooth

B. HID iClass Reader with Keypad

2.51 DOOR LOCK POWER SUPPLIES:

A. The Contractor shall provide a dual power supply for each DGP. Each power supply shall provide 24 VDC power to all electric locks and 12DC for DGP power. Each door's electric lock circuit shall be fused independently at the power supply enclosure (on DIN Rail terminal). Shorting or a single door lock circuit shall not affect other doors connected to a common door lock power supply. One (1) power supply shall be provided for each DGP. The door power supply shall include rechargeable standby power to provide a minimum of eight (8) hours of stand-by battery power at peak usage for door locks and DGP 12VDC. The power supplies shall be connected to the dedicated power circuit. The contractor shall provide separate low battery and AC power fail for the DGP and door power supplies.

1. All locks shall be fail secure. All door lock hardware shall provide for free egress from the protected area by activating the door handle or push bar. Door locks and hardware are provided by Division 8, with connection to this hardware by Security Contractor (Division 280500).

2. The power supplies shall meet the requirements of the data gathering panel manufacturer. All data gathering panels shall be supplied with rechargeable batteries. The rechargeable batteries shall be sized to provide a minimum of eight (8) hours of standby power for each power supply within the cabinet. Refer to Power Supply Specification.

2.52 SYSTEM SENSORS AND RELATED EQUIPMENT

A. The ACS (Access Control System) and related Equipment provided by the Contractor shall meet or exceed the following performer specifications:

B. Power Supplies

1. Alarm Device Power Supply & Distribution Cabinet with 12 VDC 10 Ampere Continuous Output Power Supply requirements are as follows:

a. The Security Contractor shall furnish and install power supply and distribution panels. Cabinet shall have a minimum of one (1) 12 VDC power supply for powering the intrusion detection and security system auxiliary devices. Power supplies shall not be loaded beyond 80 percent of the continuous output rating of the power supply. Additional power supplies shall be added to the cabinet to accommodate expanded load demands. Interior of the cabinet shall be arranged to accommodate at least one (1) power supply expansion. Each power supply shall supply 12 VDC (or 24 VDC switch selectable) and a minimum of 10 amperes continuous supply current. Power supply features shall include; filtered and electronically regulated output, built in charger for sealed gel type batteries, automatic switch-over to standby power, thermal and short circuit protection with auto reset, fused battery protection, AC input and DC output LED indicators, and AC power and low battery supervision relays (Form "C", SPDT). Each 12 VDC power supply shall be supplied with one (1) 12 VDC 17 AH rechargeable battery for standby power operation.

b. DIN rail mounted terminal strips shall be provided for all interconnections. DIN rail mounted terminal strips shall have screw-cage clamp type terminals. The use of spring tension terminal strips is prohibited. Ferrules shall be utilized, as needed, to protect individual strands on stranded wire terminations. All ferrule crimping shall be accomplished using a calibrated crimping tool approved by the manufacturer. Alarm input terminals shall be double feed through type. Each cabinet shall be

constructed to provide terminals for a minimum of 50 pairs (50 alarm-input zones). Additional input terminals shall be provided by the Contractor for each zone in expanded applications. (Provide a minimum of 20 percent expansion on the alarm-input terminals.)

c. The branch power circuit supplying detection or auxiliary device power shall have an individual fuse (1.5 AMP. maximum) for each positive leg between the main power supply output and individual distribution circuit. This shall be accomplished by providing DIN rail mounted fuse holders with LED indicators for each power leg. Each distribution cabinet shall be assembled with a minimum of 10 fuse holders with LED indicators for the positive leg and 10 feed-through terminals for the negative leg. The Contractor shall provide additional terminals and fuse blocks for expanded applications. (Provide a minimum of 20 percent expansion on the fuse holder and power terminals.)

d. Each DIN rail terminal strip shall be constructed with grounding blocks at each end of the terminal strips. Grounding blocks shall be utilized to terminate shield drain wires on shielded cables. Excess shield shall be trimmed back to the cable jacket. Each cabinet shall have a minimum of 11 grounding blocks distributed as indicated on the cabinet drawing.

e. Each terminal strip is to be clearly labeled for the intended purpose or function. The terminal strip description shall include system input zone numbers, power polarity, fuse ratings, and device descriptions to facilitate rapid service of the system. The labeling of each terminal or set of terminals shall relate to the corresponding system alarm zones. The Contractor shall provide security system site drawing, DGP assignment sheet, and schematic diagrams in a loose-leaf binder in the document holder on the cabinet door.

f. All transformers and power supplies within the cabinet shall be labeled with permanent labels for their intended purpose and input and output voltage. The AC power cords shall be routed separately from input and low voltage wiring. AC ground shall have continuity to both the mounting panel and the housing. If necessary, the Contractor shall provide grounding straps from the mounting board to the housing.

g. The Contractor shall install a power outlet in the lower left corner of the cabinet. The power outlet shall include a duplex outlet and an on/off switch with red power on indicator light. In expanded applications, the number of outlets shall be increased to support the number of power supply transformers. The power outlet shall be on an individual circuit breaker labeled “security outlets”. If emergency generator circuits are present, the outlets shall be powered from the emergency generator panel.

h. The housing for the power supply and distribution cabinet shall be a side vented NEMA 1 rated enclosure measuring a minimum of 610 x 610 x 204 mm (24 x 24 x 8 in) with a hinged door. (The Contractor shall be responsible for identifying and increasing the cabinet size to accommodate additional power supplies and batteries in expanded applications.) The hinged cabinet door shall have a metal document holder approximately 228 x 279 x 25 mm (9 x 11 x 1 in) integral to the interior of the door. The housing shall be baked gray enamel finish with an inner equipment-mounting panel. All wiring within the cabinet shall be secured by spiral wrap tubing and nylon wire ties with mechanical fasteners (i.e.: screws, rivets, etc.). All wiring shall be neatly routed in horizontal and vertical channels parallel to the cabinet’s sides and the interior terminal strips. Wiring shall not be routed over circuit boards, transformers, or terminal strips. The exterior of the housing shall have no sharp protrusions such as exposed sheet metal screws tips. Power supply circuit boards, open frame transformers, and terminal strips shall be fastened utilizing mechanical fasteners. Appropriately sized circuit board standoffs shall be utilized to prevent shorting of power supply circuit boards to the mounting board. All circuit

board mounting holes shall include standoffs. The mounting screws for permanently attached devices shall be treated with a thread-locking compound. The use of self-adhesive fasteners inside the cabinet is specifically prohibited. The cabinet shall have both front and rear tamper switches connected to the associated DGP tamper circuit. The cabinet shall be equipped with a cam type lock keyed the same as the DGP. To eliminate any false alarms caused by loose fitting doors, the cam lock shall provide sufficient latch pressure and the tamper switch shall be adjusted accordingly.

i. Tamper and power supervisory outputs shall be connected to the unsupervised inputs on the associated DGP. The following conditions shall be annunciated on the SMS: cabinet tamper, AC power failure, and low battery.

j. The Contractor shall assemble cabinets based upon the contract drawing cabinet design for alarm power and distribution power supply cabinets.

k. Acceptable Product(s):

1) Hoffman Enclosures Cabinets or approved equal
2) Securitron Power Supply or approved equal
3) Altech DIN Rail Mounted Terminal Blocks or approved equal

2. DGP/Card Reader/Lock Power Supply & Communications Distribution Panel for Data Gathering Panels and Card Readers shall contain the following specifications (custom built by the contractor):

a. The security Contractor shall provide combination DGP/Card Reader/Lock Power Supply and Communications Distribution Panels. Each panel shall have a minimum of two (2) separate power supplies for powering the DGP, card readers, reader personality modules (RM) and auxiliary devices and locks associated with the DGP. One of the power supplies shall be dedicated exclusively to 12 VDC service and serve as the DGP, card reader, reader module, and auxiliary device (request to exit motion detectors and local sounders) power supply. The second power supply shall provide 24 VDC power for electric locking devices. (Where lock load necessitates a third 24 VDC power supply, the Contractor shall include the third 24 VDC power supply and increase the cabinet proportionately.) Power supplies shall not be loaded beyond eighty percent (80%) of the continuous output rating of the power supply. Each power supply shall supply 12 VDC or 24 VDC (switch selectable) and a minimum 10 Amps continuous supply current. Power supply features shall include; filtered and electronically regulated output, built in charger for sealed gel type batteries, automatic switch-over to standby power, thermal and short circuit protection with auto reset, fused battery protection, AC input and DC output LED indicators, and AC power and low battery supervision relays (Form "C", SPDT).

b. Each 12 VDC power supply shall be supplied with a minimum of one (1) 12 VDC 17 AH rechargeable battery for DGP /Card Reader standby power operation. Each 24 VDC power supply shall be supplied with a minimum of two (2) 12 VDC seven (7) AH rechargeable batteries for lock standby power operation. If necessary, additional batteries shall be supplied by the Contractor to meet the standby time specified elsewhere in the security specification.

c. DIN rail mounted terminal strips shall be provided for all interconnections. DIN rail mounted terminal strips shall have screw-cage clamp type terminals. The use of spring tension terminal strips is prohibited. Ferrules shall be utilized, as needed, to protect individual strands on stranded wire terminations. All ferrule crimping shall be accomplished using a calibrated crimping tool approved by the ferrule manufacturer. The power circuits supplying lock power shall have an individual fuse for each positive leg between the main power supply output and individual distribution circuit. DIN rail mounted fuse holders with LED indicators shall be

provided for each power leg. Each terminal strip is to be clearly labeled for intended purpose. The terminal strip groups shall be permanently labeled to indicate function. The terminal groups would typically include: Lock Relays, Reader Data Lines; Reader/RM/AUX Power. The labeling of each terminal or set of terminals shall relate to the corresponding DGP card reader door. Terminals shall be supplied for a minimum of eight (8) door positions. The Contractor shall provide security system site drawing, data gathering panel assignment sheet and schematic diagrams in a loose-leaf binder in the document holder on the cabinet door.

d. All transformers and power supplies within the cabinet shall be labeled with permanent labels for their intended purpose and input and output voltage. The AC power cords shall be routed separately from input and low voltage wiring. AC ground shall have continuity to both the mounting panel and the housing. If necessary, the Contractor shall provide grounding straps from the mounting board to the housing.

e. The Contractor shall install a power outlet in the lower left corner of the cabinet. The power outlet shall include a duplex outlet and an on/off switch with red power on indicator light. In expanded applications, the number of outlets shall be increased to support the number of power supply transformers. The power outlet shall be on an individual circuit breaker labeled security outlets. If emergency generator circuits are present, the outlets shall be powered from the emergency generator panel.

f. The housing for the cabinet shall be a side vented NEMA 1 rated enclosure measuring a minimum of 610 mm H x 610 mm W x204 mm D (24 x 24 x 8 in) with hinged door. The Contractor shall be responsible for identifying and increasing the cabinet size to accommodate variances in battery sizes, additional power supplies and batteries in expanded applications. The hinged cabinet door shall have a metal document holder approximately 228 mm W x 279 mm H x 25 mm D (9 x 11 x 1 in) integral to the interior of the door. The housing shall be baked gray enamel finish with an inner equipment-mounting panel. All wiring within the cabinet shall be permanently attached using spiral wrap tubing and nylon wire ties with mechanical (i.e.: screws, rivets) fasteners. Also, wiring shall be neatly routed in horizontal and vertical channels parallel to the cabinet's sides and the interior terminal strips. It shall not be routed over circuit boards, transformers, and terminal strips. The exterior of the housing shall have no sharp protrusions such as exposed sheet metal screws tips. Power supply circuit boards, open frame transformers and terminal strips shall be fastened utilizing mechanical fasteners. Circuit board standoffs shall be utilized to prevent shorting of circuit boards to the mounting board. All circuit board mounting holes shall include standoffs. The mounting screws for permanently attached devices shall be treated with a thread-locking compound. The use of self-adhesive fasteners inside the cabinet is specifically prohibited. The cabinet shall have both front and rear tamper switches connected to the associated date gathering panel tamper circuit. The cabinet shall be equipped with a cam type lock keyed the same as the DGP. Cam lock shall provide sufficient latch pressure and tamper switch adjusted to eliminate any false alarms caused by loose fitting doors.

g. Tamper and power outputs shall be connected to the unsupervised inputs on the associated DGP. The following conditions shall be annunciated on the security management system: cabinet tamper, AC power fail, and low battery.

h. The Contractor shall assemble cabinets based upon the contract drawing cabinet design for DGP/Readers and Door Lock Power Supply Panel.

i. Acceptable equipment shall be Hoffman Enclosures Cabinets, Securitron Power Supply, and Altech DIN Rail Mounted Terminal Blocks, or approved equivalent.

PART 3 - EXECUTION

3.1 GENERAL

A. The Contractor shall install all system components and appurtenances in accordance with the manufacturers' instructions, ANSI C2, and shall furnish all necessary interconnections, services, and adjustments required for a complete and operable system as specified. Control signals, communications, and data transmission lines grounding shall be installed as necessary to preclude ground loops, noise, and surges from affecting system operation. Equipment, materials, installation, workmanship, inspection, and testing shall be in accordance with manufacturers' recommendations and as modified herein.

B. Consult the manufacturers' installation manuals for all wiring diagrams, schematics, physical equipment sizes, etc., before beginning system installation. Refer to the Riser/Connection diagram for all schematic system installation/termination/wiring data.

C. All equipment shall be attached to walls and ceiling/floor assemblies and shall be held firmly in place (e.g., sensors shall not be supported solely by suspended ceilings). Fasteners and supports shall be adequate to support the required load.

3.2 CURRENT SITE CONDITIONS

A. The Contractor shall visit the site and verify that site conditions are in agreement with the design package. The Contractor shall report all changes to the site or conditions which will affect performance of the system to the Contracting Officer in a report as defined in paragraph Group II Technical Data Package. The Contractor shall not take any corrective action without written permission from the Contracting Officer.

3.3 EXAMINATION

A. Examine pathway elements intended for cables. Check raceways, cable trays, and other elements for compliance with space allocations, installation tolerances, hazards to cable installation, and other conditions affecting installation.

B. Examine roughing-in for LAN and control cable conduit systems to PCs, Controllers, card readers, and other cable-connected devices to verify actual locations of conduit and back boxes before device installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.4 PREPARATION

A. Comply with recommendations in SIA CP-01.

B. Comply with EIA/TIA-606, "Administration Standard for the Telecommunications Infrastructure of Commercial Buildings."

C. Obtain detailed Project planning forms from manufacturer of access-control system; develop custom forms to suit Project. Fill in all data available from Project plans and specifications and

publish as Project planning documents for review and approval. All forms shall be completed in accordance with specified timelines outlines in Group Technical Data Packages in Section 280500.

1. Record setup data for control station and workstations.

2. For each Location, record setup of Controller features and access requirements.

3. Access Lists

4. Propose start and stop times for time zones and holidays, and match up access levels for doors.

5. Set up groups, facility codes, linking, and list inputs and outputs for each Controller.

6. Assign action message names and compose messages.

7. Set up alarms. Establish interlocks between alarms, intruder detection, and video surveillance features.

8. Prepare and install alarm graphic maps.

9. Develop user-defined fields.

10. Develop screen layout formats.

11. Propose setups for guard tours and key control.

12. Discuss badge layout options; design badges.

13. Complete system diagnostics and operation verification.

14. Prepare a specific plan for system testing, startup, and demonstration (see the Testing section for requirements).

15. Develop acceptance test concept and, on approval, develop specifics of the test.

16. Develop cable and asset management system details; input data from construction documents. Include system schematics and Visio Technical Drawings.

17. Develop data gathering panel matrices that conform to Section 280500.

D. In meetings with Contracting Officer, present Project planning documents and review, adjust, and prepare final setup documents. Use final documents to set up system software.

E. All Programming and access lists are submitted, reviewed, and accomplished before any devices are terminated and/or tested.

END OF SECTION

SECTION 28 13 23 - OPTICAL FIBER BACKBONE CABLING FOR ELECTRONIC SECURITY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. 9/125 micrometer single-mode, indoor-outdoor optical fiber cable (OS1).
   2. Optical fiber cable connecting hardware, patch panels, and cross-connects.
   3. Cabling identification products.

1.2 OPTICAL FIBER BACKBONE CABLING DESCRIPTION

A. Optical fiber backbone cabling system shall provide interconnections between communications equipment rooms, main terminal space, and entrance facilities in the telecommunications cabling system structure. Cabling system consists of backbone cables, intermediate and main cross-connects, mechanical terminations, and patch cords or jumpers used for backbone-to-backbone cross-connection.

B. Backbone cabling cross-connects may be located in communications equipment rooms or at entrance facilities. Bridged taps and splitters shall not be used as part of backbone cabling.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Reviewed and stamped by RCDD.

   1. System Labeling Schedules: Electronic copy of labeling schedules, in software and format selected by Owner.
   2. System Labeling Schedules: Electronic copy of labeling schedules that are part of the cabling and asset identification system of the software.
   3. Cabling administration drawings and printouts.
   4. Wiring diagrams to show typical wiring schematics including the following:

      a. Telecommunications rooms plans and elevations.
      b. Telecommunications pathways.
      c. Telecommunications system access points.
      d. Telecommunications grounding system
      e. Cross-connects.
      f. Patch panels.
      g. Patch cords.

   5. Cross-connects and patch panels.

C. Optical fiber cable testing plan.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For [RCDD,] [Installer,]installation supervisor, and field inspector.

B. Source quality-control reports.

C. Field quality-control reports.

D. Product Certificates: For each type of product.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.

1. Layout Responsibility: Preparation of Shop Drawings and Cabling Administration Drawings by an RCDD.
2. Installation Supervision: Installation shall be under the direct supervision of 2 Installer, who shall be present at all times when Work of this Section is performed at Project site.
3. Testing Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.

B. Testing Agency Qualifications: Testing agency must have personnel certified by BICSI on staff.

1. Testing Agency's Field Supervisor: Currently certified by BICSI as an RCDD.

C. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25or less.
2. Smoke-Developed Index: 50 or less.

1.7 COORDINATION

A. Coordinate layout and installation of telecommunications pathways and cabling with Owner's telecommunications and LAN equipment and service suppliers.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General Performance: Backbone cabling system shall comply with transmission standards in TIA-568-C.1, when tested according to test procedures of this standard.

B. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 50 or less.

C. Telecommunications Pathways and Spaces: Comply with TIA-569-D.

D. Grounding: Comply with TIA-607-B.

2.2 9/125 MICROMETER SINGLE-MODE, INDOOR-OUTDOOR OPTICAL FIBER CABLE (OS1)

A. Description: Single mode, 9/125-micrometer, 6 fibers, single loose tube, optical fiber cable.

B. Standards:

1. Comply with TIA-492CAAA for detailed specifications.
2. Comply with TIA-568-C.3 for performance specifications.
3. Comply with ICEA S-104-696 for mechanical properties.

C. Armored cable shall be steel or aluminum armored type.

D. Maximum Attenuation: 0.5 dB/km at 1310 nm; 0.5 dB/km at 1550 nm.

E. Jacket:

1. Jacket Color: Yellow
2. Cable cordage jacket, fiber, unit, and group color shall be according to TIA-598-D.
3. Imprinted with fiber count, fiber type, and aggregate length at regular intervals not to exceed 40 inches (1000 mm).

F. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444, UL 1651, and NFPA 70 for the following types:
1. Plenum Rated, Armored (Conductive): Type OFCP, Type OFNP, Type OFCR, or Type OFNR in metallic conduit installed per NFPA 70, Article 300.22, "Wiring in Ducts, Plenums, and Other Air-Handling Spaces."

2.3 OPTICAL FIBER CABLE HARDWARE

A. Standards:

1. Comply with Optical Fiber Connector Intermateability Standard specifications of the TIA-604 series.
2. Comply with TIA-568-C.3.

B. Cross-Connects and Patch Panels: Modular panels housing multiple-numbered, duplex cable connectors.

1. Number of Connectors per Field: Two for each fiber of cable or cables assigned to field, plus spares and blank positions adequate to suit specified expansion criteria.

C. Patch Cords: Factory-made, dual-fiber cables in 36-inch (900-mm) lengths.

D. Connector Type: Type LC complying with TIA-604-10-B.

E. Plugs and Plug Assemblies:

1. Male; color-coded modular telecommunications connector designed for termination of a single optical fiber cable.
2. Insertion loss not more than 0.25 dB.
3. Marked to indicate transmission performance.

F. Jacks and Jack Assemblies:

1. Female; quick-connect, simplex and duplex; fixed telecommunications connector designed for termination of a single optical fiber cable.
2. Insertion loss not more than 0.25 dB.
3. Marked to indicate transmission performance.
4. Designed to snap-in to a patch panel or faceplate.

2.4 GROUNDING

A. Comply with requirements in Section 270526 "Grounding and Bonding for Communications Systems" for grounding conductors and connectors.

B. Comply with TIA-607-B.

2.5 IDENTIFICATION PRODUCTS

A. Comply with TIA-606-B and UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.

2.6 SOURCE QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to evaluate cables.

B. Factory test multimode optical fiber cables according to TIA-526-14-B and TIA-568-C.3.

C. Factory test pre-terminated optical fiber cable assemblies according to TIA-526-14-B and TIA-568-C.3.

D. Cable will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 ENTRANCE FACILITIES

A. Coordinate backbone cabling with the protectors and demarcation point provided by communications service provider.

3.2 WIRING METHODS

A. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters. Conceal raceway and cables except in unfinished spaces.

1. Install plenum cable in environmental air spaces, including plenum ceilings.
2. Comply with requirements for pathways specified in Section 270528 "Pathways for Communications Systems."

B. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

C. Wiring within Enclosures: Bundle, lace, and train cables within enclosures. Connect to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

3.3 INSTALLATION OF OPTICAL FIBER BACKBONE CABLES

A. Comply with NECA 1, NECA 301, and NECA/BICSI 568.

B. General Requirements for Optical Fiber Cabling Installation:

1. Comply with TIA-568-C.1 and TIA-568-C.3.
2. Comply with BICSI ITSIMM, Ch. 6, "Cable Termination Practices."
3. Terminate all cables; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, cross-connects, and patch panels.
4. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inches (760 mm) and not more than 6 inches (150 mm) from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
5. Install lacing bars to restrain cables, to prevent straining connections, and to prevent bending cables to smaller radii than minimums recommended by manufacturer.
6. Bundle, lace, and train cable to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIMM, "Cabling Termination Practices" Chapter. Use lacing bars and distribution spools.
7. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
8. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.
9. In the communications equipment room, provide a 10-foot- (3-m-) long service loop on each end of cable.
10. Pulling Cable: Comply with BICSI ITSIMM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.
11. Cable may be terminated on connecting hardware that is rack or cabinet mounted.

C. Open-Cable Installation:

1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
2. Cable shall not be run through structural members or in contact with pipes, ducts, or other potentially damaging items.

D. Installation of Cable Routed Exposed under Raised Floors:

1. Install plenum-rated cable only.
2. Install cabling after the flooring system has been installed in raised floor areas.
3. Coil cable 6 feet (1800 mm) long not less than 12 inches (300 mm) in diameter below each feed point.

E. Group connecting hardware for cables into separate logical fields.

3.4 FIRESTOPPING

A. Comply with requirements in Section 078413 "Penetration Firestopping."

B. Comply with TIA-569-D, Annex A, "Firestopping."

C. Comply with BICSI ITSIMM, "Firestopping" Chapter.

3.5 GROUNDING

A. Install grounding according to BICSI ITSIMM, "Grounding (Earthing), Bonding, and Electrical Protection" Chapter.

B. Comply with TIA-607-B and NECA/BICSI-607.

C. Locate grounding bus bar to minimize the length of bonding conductors. Fasten to wall allowing at least 2-inch (50-mm) clearance behind the grounding bus bar. Connect grounding bus bar with a minimum No. 4 AWG grounding electrode conductor from grounding bus bar to suitable electrical building ground.

D. Bond metallic equipment to the grounding bus bar, using not smaller than No. 6 AWG equipment grounding conductor.

3.6 IDENTIFICATION

A. Identify system components, wiring, and cabling complying with TIA-606-B. Comply with requirements for identification specified in Section 270553 "Identification for Communications Systems."

1. Administration Class: Class 2.
2. Color-code cross-connect fields and apply colors to voice and data service backboards, connections, covers, and labels.

B. Paint and label colors for equipment identification shall comply with TIA-606-B for Class 2 level of administration including optional identification requirements of this standard.

C. Comply with requirements in Section 271523 "Communications Optical Fiber Horizontal Cabling" for cable and asset management software.

D. Cable Schedule: Install in a prominent location in each equipment room and wiring closet. List incoming and outgoing cables and their designations, origins, and destinations. Protect with rigid frame and clear plastic cover. Furnish an electronic copy of final comprehensive schedules for Project.

E. Cabling Administration Drawings: Show building floor plans with cabling administration-point labeling. Identify labeling convention and show labels for telecommunications closets, backbone pathways and cables, terminal hardware and positions, horizontal cables, work areas and workstation terminal positions, grounding buses and pathways, and equipment grounding conductors.

F. Cable and Wire Identification:

1. Label each cable within 4 inches (100 mm) of each termination and tap, where it is accessible in a cabinet or junction or outlet box, and elsewhere as indicated.
2. Each wire connected to building-mounted devices is not required to be numbered at device if color of wire is consistent with associated wire connected and numbered within panel or cabinet.
3. Exposed Cables and Cables in Cable Trays and Wire Troughs: Label each cable at intervals not exceeding 15 feet (4.5 m).
4. Label each unit and field within distribution racks and frames.
5. Identification within Connector Fields in Equipment Rooms and Wiring Closets: Label each connector and each discrete unit of cable-terminating and connecting hardware. Where similar jacks and plugs are used for both voice and data communication cabling, use a different color for jacks and plugs of each service.

G. Labels shall be preprinted or computer-printed type with printing area and font color that contrasts with cable jacket color but still complies with requirements in TIA 606-B, for the following:

1. Flexible vinyl or polyester that flexes as cables are bent.

3.7 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Perform tests and inspections.

C. Tests and Inspections:

1. Visually inspect optical fiber jacket materials for NRTL certification markings. Inspect cabling terminations in communications equipment rooms for compliance with color-coding for pin assignments, and inspect cabling connections for compliance with TIA-568-C.1.
2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
3. Optical Fiber Cable Tests:

a. Test instruments shall meet or exceed applicable requirements in TIA-568-C.1. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
b. Link End-to-End Attenuation Tests:

1) Horizontal and multimode backbone link measurements: Test at 850 or 1300 nm in one direction according to TIA-526-14-B, Method B, One Reference Jumper.
2) Attenuation test results for backbone links shall be less than 2.0 dB. Attenuation test results shall be less than those calculated according to equation in TIA-568-C.1.

D. Data for each measurement shall be documented. Data for submittals shall be printed in a summary report that is formatted similar to Table 10.1 in BICSI TDMM, or transferred from the instrument to the computer, saved as text files, and printed and submitted.

E. Remove and replace cabling where test results indicate that it does not comply with specified requirements.

F. End-to-end cabling will be considered defective if it does not pass tests and inspections.

G. Prepare test and inspection reports.

END OF SECTION

SECTION 28 15 13 – SECURITY COPPER HORIZONTAL CABLING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Category 6A twisted pair cable.
2. Twisted pair cable hardware, including plugs and jacks.
3. Multiuser telecommunications outlet assembly.
4. Cable management system.
5. Cabling identification products.
6. Grounding provisions for twisted pair cable.
7. Source quality control requirements for twisted pair cable.

B. Related Requirements:

1. Section 270513 "Conductors and Cables for Communications Systems" for data cabling associated with system panels and devices.

1.2 DEFINITIONS

A. Cross-Connect: A facility enabling the termination of cable elements and their interconnection or cross-connection.
B. EMI: Electromagnetic interference.
C. FTP: Shielded twisted pair.
D. F/FTP: Overall foil screened cable with foil screened twisted pair.
E. F/UTP: Overall foil screened cable with unscreened twisted pair.
F. IDC: Insulation displacement connector.
G. LAN: Local area network.
H. Jack: Also commonly called an "outlet," it is the fixed, female connector.
I. Plug: Also commonly called a "connector," it is the removable, male telecommunications connector.
J. RCDD: Registered Communications Distribution Designer.
K. Screen: A metallic layer, either a foil or braid, placed around a pair or group of conductors.
L. Shield: A metallic layer, either a foil or braid, placed around a pair or group of conductors.
M. S/FTP: Overall braid screened cable with foil screened twisted pair.
N. S/UTP: Overall braid screened cable with unscreened twisted pairs.
O. UTP: Unscreened (unshielded) twisted pair.

1.3 COPPER HORIZONTAL CABLING DESCRIPTION

A. Horizontal cable cabling system shall provide interconnections between Distributor A, Distributor B, or Distributor C, and the equipment outlet, otherwise known as "Cabling Subsystem 1," in the telecommunications cabling system structure. Cabling system consists of horizontal cables, intermediate and main cross-connects, mechanical terminations, and patch cords or jumpers used for horizontal-to-horizontal cross-connection.

1. TIA-568-C.1 requires that a minimum of two equipment outlets be installed for each work area.
2. Horizontal cabling shall contain no more than one transition point or consolidation point between the horizontal cross-connect and the telecommunications equipment outlet.
3. Bridged taps and splices shall not be installed in the horizontal cabling.

B. A work area is approximately 100 sq. ft. (9.3 sq. m), and includes the components that extend from the equipment outlets to the station equipment.
C. The maximum allowable horizontal cable length is 295 feet (90 m). This maximum allowable length does not include an allowance for the length of 16 feet (4.9 m) to the workstation equipment or in the horizontal cross-connect.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.
B. Shop Drawings: Reviewed and stamped by RCDD.

1. System Labeling Schedules:

a. Electronic copy of labeling schedules, in software and format selected by Owner.
b. Electronic copy of labeling schedules that are part of cabling and asset identification system of software.

2. Cabling administration Drawings and printouts.
3. Wiring diagrams and installation details of telecommunications equipment, to show location and layout of telecommunications equipment, including the following:

a. Telecommunications rooms plans and elevations.
b. Telecommunications pathways.
c. Telecommunications system access points.
d. Telecommunications grounding system.
e. Telecommunications conductor drop locations.
f. Typical telecommunications details.
g. Mechanical, electrical, and plumbing systems.

C. Twisted pair cable testing plan.
D. Samples: For telecommunications jacks and plugs, in specified finish, one for each type and configuration and cover plates for color selection and evaluation of technical features.
E. Field Quality-Control Submittals:

1. Field quality-control reports.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For RCDD, installation supervisor, and field inspector.
B. Product Certificates: For each type of product.
C. Source quality-control reports.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For splices and connectors to include in maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Connecting Blocks: Two of each type.
2. Cover Plates: Two of each type.
3. Jacks: Twenty of each type.
4. Multiuser Telecommunications Outlet Assemblies: One of each type, when used.
5. Patch-Panel Units: Two of each type.
6. Plugs: Twenty of each type.

1.8 QUALITY ASSURANCE

A. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.

1. Layout Responsibility: Preparation of Shop Drawings and cabling administration Drawings, and field testing program development] by an RCDD.
2. Installation Supervision: Installation shall be under the direct supervision of Level 2 Installer, who shall be present at all times when Work of this Section is performed at Project site.
3. Testing Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.

B. Testing Agency Qualifications: Testing agency must have personnel certified by BICSI on staff.

1. Testing Agency's Field Supervisor: Currently certified by BICSI as an RCDD.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Test cables upon receipt at Project site.

1. Test each pair of twisted pair cable for open and short circuits.

1.10 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install cables and connecting materials until wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.11 COORDINATION

A. Coordinate layout and installation of telecommunications pathways and cabling with Owner's telecommunications and LAN equipment and service suppliers.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General Performance: Horizontal cabling system shall comply with transmission standards in TIA-568-C.1, when tested according to test procedures of this standard.
B. Telecommunications Pathways and Spaces: Comply with TIA-569-D.
C. Grounding: Comply with TIA-607-B.

2.2 GENERAL CABLE CHARACTERISTICS

A. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with the applicable standard and NFPA 70 for the following types:

1. Communications, Plenum Rated:

a. Type CMP complying with UL 1685 or Type CMP in listed cable routing assembly.
b. Type CM, Type CMG, Type CMP, Type CMR, or Type CMX in metallic conduit installed according to NFPA 70, Article 300.22, "Wiring in Ducts, Plenums, and Other Air-Handling Spaces."

2. Communications, Non-Plenum Rated:

a. Type CMP or Type CMR in metallic conduit installed according to NFPA 70, Article 300.22, "Wiring in Ducts, Plenums, and Other Air-Handling Spaces."

B. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 50 or less.

C. RoHS compliant.

2.3 CATEGORY 6 TWISTED PAIR CABLE

A. Description: Four-pair, balanced-twisted pair cable, with internal spline, certified to meet transmission characteristics of Category 6 cable at frequencies up to 250 MHz.
B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. 3M.
2. AMP NETCONNECT; a TE Connectivity Ltd. company.
3. Belden Inc.
4. Berk-Tek Leviton; a Nexans/Leviton alliance.
5. CommScope, Inc.
6. General Cable; Prysmian Group North America.
7. Genesis Cable Products; Honeywell International, Inc.
8. Hitachi Cable America Inc.
9. Mohawk Cable; brand of Belden, Inc.
10. Prysmian Cables and Systems; Prysmian Group North America.
11. Superior Essex Inc.; subsidiary of LS Corp.

C. Standard: Comply with NEMA WC 66/ICEA S-116-732 and TIA-568-C.2 for Category 6 cables.
D. Conductors: 100-ohm, 23 AWG solid copper.
E. Shielding/Screening: Unshielded twisted pairs (UTP).
F. Cable Rating: Plenum.
G. Jacket: See plans for requirements.

2.4 TWISTED PAIR CABLE HARDWARE

A. Description: Hardware designed to connect, splice, and terminate twisted pair copper communications cable.
B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. 3M.
2. American Technology Systems Industries, Inc.
3. AMP NETCONNECT; a TE Connectivity Ltd. company.
4. Belden Inc.
5. Berk-Tek Leviton; a Nexans/Leviton alliance.
6. CommScope, Inc.
7. Dynacom Corporation.
8. General Cable; Prysmian Group North America.
9. Genesis Cable Products; Honeywell International, Inc.
10. Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
11. KRONE Incorporated.
12. Leviton Manufacturing Co., Inc.
13. Mohawk Cable; brand of Belden, Inc.
14. Molex Connected Enterprise Solutions; business of Molex, LLC; Koch Industries.
15. Panduit Corp.

16. Prysmian Cables and Systems; Prysmian Group North America.
17. Siemon Co. (The).
18. Superior Essex Inc.; subsidiary of LS Corp.

C. General Requirements for Twisted Pair Cable Hardware:

1. Comply with the performance requirements of Category 6.
2. Comply with TIA-568-C.2, IDC type, with modules designed for punch-down caps or tools.
3. Cables shall be terminated with connecting hardware of same category or higher.

D. Source Limitations: Obtain twisted pair cable hardware from same manufacturer as twisted pair cable, from single source.

E. Connecting Blocks:

1. 110-style IDC for Category 5e.
2. 66-style IDC for Category 5e.
3. 110-style IDC for Category 6.
4. 110-style IDC for Category 6a.
5. Provide blocks for the number of cables terminated on the block, plus 25 percent spare, integral with connector bodies, including plugs and jacks where indicated.
6. Number of Terminals per Field: One for each conductor in assigned cables.

F. Patch Panel: Modular panels housing numbered jack units with IDC-type connectors at each jack location for permanent termination of pair groups of installed cables.

1. Features:

a. Universal T568A and T568B wiring labels.
b. Labeling areas adjacent to conductors.
c. Replaceable connectors.
d. 24 or 48 ports.

2. Construction: 16-gauge steel and mountable on 19-inch (483 mm) equipment racks.
3. Number of Jacks per Field: One for each four-pair cable indicated]

G. Patch Cords: Factory-made, four-pair cables in 36-inch lengths; terminated with an eight-position modular plug at each end.

1. Patch cords shall have bend-relief-compliant boots and color-coded icons to ensure performance. Patch cords shall have latch guards to protect against snagging.

H. Plugs and Plug Assemblies:

1. Male; eight position; color-coded modular telecommunications connector designed for termination of a single four-pair, 100-ohm, unshielded or shielded twisted pair cable.
2. Standard: Comply with TIA-568-C.2.

I. Jacks and Jack Assemblies:

1. Female; eight position; modular; fixed telecommunications connector designed for termination of a single four-pair, 100-ohm, unshielded or shielded twisted pair cable.
2. Designed to snap-in to a patch panel or cover plate.
3. Standard: Comply with TIA-568-C.2.

J. Cover Plate:

1. Six port, vertical single gang cover plates designed to mount to double gang wall boxes with single gang mud ring.
2. Twelve port, vertical double gang cover plates designed to mount to double gang wall boxes. Where indicated on plans.
3. Metal Cover Plate: Stainless steel, complying with requirements in Section 260533 "Raceway and Boxes for Electrical Systems."
4. For use with snap-in jacks accommodating any combination of twisted pair, optical fiber, and coaxial work area cords.

    a. Flush mounting jacks, positioning the cord at a 45-degree angle.

K. Legend:

1. Machine printed, in the field, using adhesive-tape label.
2. Snap-in, clear-label covers and machine-printed paper inserts.

2.5 CABLE MANAGEMENT SYSTEM

A. Description: Computer-based cable management system, with integrated database and graphic capabilities.
B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. iTRACS Corporation.
2. Telsoft Solutions.

C. Information shall be presented in database view, schematic plans, or technical drawings.

1. AutoCAD drawing software shall be used as drawing and schematic plans software.

D. System shall interface with the following testing and recording devices:

1. Direct upload tests from circuit testing instrument into the personal computer.
2. Direct download circuit labeling into labeling printer.

2.6 IDENTIFICATION PRODUCTS

A. Comply with TIA-606-B and UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.

2.7 SOURCE QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to evaluate cables.
B. Factory test cables on reels according to TIA-568-C.1.
C. Factory test twisted pair cables according to TIA-568-C.2.
D. Cable will be considered defective if it does not pass tests and inspections.
E. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 WIRING METHODS

A. Routing:

1. Install cables in raceways and cable trays, except within consoles, cabinets, desks, and counters and except in accessible ceiling spaces, attics, and gypsum board partitions

where unenclosed wiring method may be used. Conceal raceway and cables, except in unfinished spaces.

a. Install plenum cable in environmental air spaces, including plenum ceilings.
b. Comply with requirements for raceways and boxes specified in Section 270528 "Pathways for Communications Systems."

2. Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

3.2 INSTALLATION OF PATHWAYS

A. Comply with requirements for demarcation point, cabinets, and racks specified in Section 271100 "Communications Equipment Room Fittings."
B. Comply with Section 270528 "Pathways for Communications Systems."
C. Comply with Section 270529 "Hangers and Supports for Communications Systems."
D. Comply with Section 270536 "Cable Trays for Communications Systems."
E. Drawings indicate general arrangement of pathways and fittings.

3.3 INSTALLATION OF TWISTED-PAIR HORIZONTAL CABLES

A. Comply with NECA 1 and NECA/BICSI 568.
B. General Requirements for Cabling:

1. Comply with TIA-568-C.0, TIA-568-C.1, and TIA-568-C.2.
2. Comply with BICSI's "Information Transport Systems Installation Methods Manual (ITSIMM), Ch. 5, "Copper Structured Cabling Systems," "Cable Termination Practices" Section.
3. Install 110-style IDC termination hardware unless otherwise indicated.
4. Do not untwist twisted pair cables more than 1/2 inch (12 mm) from the point of termination to maintain cable geometry.
5. Terminate all conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, cross-connects, and patch panels.
6. MUTOA shall not be used as a cross-connect point.
7. Consolidation points may be used only for making a direct connection to equipment outlets:

a. Do not use consolidation point as a cross-connect point, as a patch connection, or for direct connection to workstation equipment.
b. Locate consolidation points for twisted-pair cables at least 49 feet (15 m) from communications equipment room.

8. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inches (760 mm) and not more than 6 inches (150 mm) from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
9. Install lacing bars to restrain cables, prevent straining connections, and prevent bending cables to smaller radii than minimums recommended by manufacturer.
10. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI Information Transport Systems Installation Methods Manual, Ch. 5, "Copper Structured Cabling Systems," "Cable Termination Practices" Section. Use lacing bars and distribution spools.
11. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation, and replace it with new cable.
12. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.
13. In the communications equipment room, install a 10-foot- (3-m-) long service loop on each end of cable.

14. Pulling Cable: Comply with BICSI Information Transport Systems Installation Methods Manual, Ch. 5, "Copper Structured Cabling Systems," "Pulling and Installing Cable" Section. Monitor cable pull tensions.

C. Open-Cable Installation:

1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
2. Suspend twisted pair cabling, not in a wireway or pathway, a minimum of 12 inches above ceilings by cable supports not more than 48 inches apart.
3. Cable shall not be run through structural members or in contact with pipes, ducts, or other potentially damaging items.

D. Installation of Cable Routed Exposed under Raised Floors:

1. Install plenum-rated cable only.
2. Install cabling after the flooring system has been installed in raised floor areas.
3. Coil cable 6 feet long not less than 12 inches in diameter below each feed point.

E. Group connecting hardware for cables into separate logical fields.
F. Separation from EMI Sources:

1. Comply with recommendations from BICSI's "Telecommunications Distribution Methods Manual" and TIA-569-D for separating unshielded copper communication cable from potential EMI sources, including electrical power lines and equipment.
2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:

    a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 5 inches (127 mm).
    b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 12 inches (300 mm).
    c. Electrical Equipment Rating More Than 5 kVA: A minimum of 24 inches (600 mm).

3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:

    a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 2-1/2 inches (64 mm).
    b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 6 inches (150 mm).
    c. Electrical Equipment Rating More Than 5 kVA: A minimum of 12 inches (300 mm).

4. Separation between communications cables in grounded metallic raceways, power lines, and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:

    a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
    b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 3 inches (76 mm).
    c. Electrical Equipment Rating More Than 5 kVA: A minimum of 6 inches (150 mm).

5. Separation between Communications Cables and Electrical Motors and Transformers, 5 kVA or HP and Larger: A minimum of 48 inches (1200 mm).
6. Separation between Communications Cables and Fluorescent Fixtures: A minimum of 5 inches (127 mm).

3.4 FIRESTOPPING

A. Comply with requirements in Section 078413 "Penetration Firestopping."
B. Comply with TIA-569-D, Annex A, "Firestopping."
C. Comply with "Firestopping Systems" Article in BISCI's "Telecommunications Distribution Methods Manual."

3.5 GROUNDING

A. Comply with requirements in Section 270526 "Grounding and Bonding for Communications Systems" for grounding conductors and connectors.
B. Install grounding according to the "Grounding, Bonding, and Electrical Protection" chapter in BICSI's "Telecommunications Distribution Methods Manual."
C. Comply with TIA-607-B and NECA/BICSI-607.
D. Locate grounding bus bar to minimize the length of bonding conductors. Fasten to wall, allowing at least a 2-inch (50-mm) clearance behind the grounding bus bar. Connect grounding bus bar to suitable electrical building ground, using a minimum No. 4 AWG grounding electrode conductor.
E. Bond metallic equipment to the grounding bus bar, using not smaller than a No. 6 AWG equipment grounding conductor.

3.6 IDENTIFICATION

A. Identify system components, wiring, and cabling complying with TIA-606-B. Comply with requirements for identification specified in Section 270553 "Identification for Communications Systems."

    1. Administration Class: Class 3.
    2. Color-code cross-connect fields and apply colors to voice and data service backboards, connections, covers, and labels.

B. Paint and label colors for equipment identification shall comply with TIA-606-B for Class 3 level of administration, including optional identification requirements of this standard.
C. Cable Schedule: Install in a prominent location in each equipment room and wiring closet. List incoming and outgoing cables and their designations, origins, and destinations. Protect with rigid frame and clear plastic cover. Furnish an electronic copy of final comprehensive schedules for Project.
D. Cabling Administration Drawings: Show building floor plans with cabling administration-point labeling. Identify labeling convention and show labels for telecommunications closets, terminal hardware and positions, horizontal cables, work areas and workstation terminal positions, grounding buses and pathways, and equipment grounding conductors.
E. Cable and Wire Identification:

    1. Label each cable within 4 inches (100 mm) of each termination and tap, where it is accessible in a cabinet or junction or outlet box, and elsewhere as indicated.
    2. Each wire connected to building-mounted devices is not required to be numbered at the device if wire color is consistent with associated wire connected and numbered within panel or cabinet.
    3. Exposed Cables and Cables in Cable Trays and Wire Troughs: Label each cable at intervals not exceeding 15 feet (4.5 m).
    4. Label each terminal strip, and screw terminal in each cabinet, rack, or panel.

        a. Individually number wiring conductors connected to terminal strips, and identify each cable or wiring group, extended from a panel or cabinet to a building-mounted device, with the name and number of a particular device.
        b. Label each unit and field within distribution racks and frames.

5. Identification within Connector Fields in Equipment Rooms and Wiring Closets: Label each connector and each discrete unit of cable-terminating and -connecting hardware. Where similar jacks and plugs are used for both voice and data communication cabling, use a different color for jacks and plugs of each service.

F. Labels shall be preprinted or computer-printed type, with a printing area and font color that contrast with cable jacket color but still comply with TIA-606-B requirements for the following:

1. Cables use flexible vinyl or polyester that flexes as cables are bent.

3.7 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Visually inspect jacket materials for NRTL certification markings. Inspect cabling terminations in communications equipment rooms for compliance with color-coding for pin assignments and inspect cabling connections for compliance with TIA-568-C.1.
2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
3. Test twisted pair cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination but not cross-connection.

a. Test instruments shall meet or exceed applicable requirements in TIA-568-C.2. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.

B. Data for each measurement shall be documented. Data for submittals shall be printed in a summary report that is formatted similarly to Table 10.1 in BICSI's "Telecommunications Distribution Methods Manual," or shall be transferred from the instrument to the computer, saved as text files, printed, and submitted.
C. Nonconforming Work:

1. End-to-end cabling will be considered defective if it does not pass tests and inspections.
2. Remove and replace cabling where test results indicate that they do not comply with specified requirements.

D. Collect, assemble, and submit test and inspection reports.
E. Manufacturer Services:

1. Engage factory-authorized service representative to support field tests and inspections.

END OF SECTION

SECTION 28 15 23 - INTERCOM AND PUBLIC ADDRESS SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Digital audio intercom entry systems.
2. Digital audio-video intercom entry systems.

B. Related Requirements:

1. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.
2. Section 280010 "Supplemental Requirements for Electronic Safety and Security" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Coordination Meeting(s): For intercom entry system. Conduct meeting(s) at Project site before construction activity.

1. Attendees: Installers, fabricators, representatives of manufacturers, representatives from telecommunications, Owner's security representatives, IT representatives, and administrants for field tests and inspections. Notify Architect, Construction Manager, and Owner's Commissioning Authority of scheduled meeting dates.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Digital audio intercom entry systems.
2. Digital audio-video intercom entry systems.
3. PA system speakers

B. Shop Drawings:

1. Project general notes.
2. Device layout.
3. Block diagram and cable/conduit routing.
4. System communications details.
5. System mounting details.
6. Secondary power calculations.

C. Field Quality-Control Submittals:

1. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

A. Manufacturers' Published Instructions: Record copy of official installation and testing instructions issued to Installer by manufacturer for the following:

1. Installation and startup instructions for intercom entry systems.

2. Manufacturer's recommended tests and inspections for intercom entry systems.

B. Sample warranties.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Contracts:

1. Software and firmware service agreement.

B. Warranty documentation.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to intercom entry system, that are packaged with protective covering for storage on-site and identified with labels describing contents.

1.7 WARRANTY

A. Special Installer Extended Warranty: Installer warrants that fabricated and installed intercom entry system perform in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period.

1. Extended-Warranty Period: **Three** years from date from system acceptance; full coverage for labor, materials, and equipment.

B. Special Manufacturer Extended Warranty: Manufacturer warrants that intercom entry system perform in accordance with specified requirements and agrees to provide repair or replacement of components or products that fail to perform as specified within extended-warranty period.

1. Warranty Period: **Three** years from date of acceptance; **full** coverage for labor, materials, and equipment.

PART 2 - PRODUCTS

2.1 DIGITAL AUDIO INTERCOM ENTRY SYSTEMS

A. Manufacturers

1. Acceptable Manufacturer:

a. Zenitel Intercom Master and PA Speakers
b. Approved Equal

2. Requests for substitutions will be considered in accordance with provisions of Section 28 05 00.

B. Performance and Design Requirements

1. Standards Compliance:

a. Supports the following SIP protocols:

1) RFC 3261.

2) RFC 3215.
3) RFC 2976.
4) RFC 2833.
5) RFC 4566.
6) RFC 3550.

b. Supports open IP standards, including:

1) SIP.
2) HTTP(s).
3) NTP.
4) SNMP.
5) SSH.
6) SIPS.
7) DIP.
8) mDNS.
9) Discovery.
10) VoIP.
11) Multicast

c. Audio codecs shall be:

1) G.722 (HD Voice).
2) G.711A.
3) G.711u.
4) G.729 for SIP phones.

2. System shall provide fast open duplex voice communication with emergency paging and active noise cancellation for high noise environments.
3. System shall assist with personnel safety, facility security, operational efficiency, critical communication, visitor entry and maintenance functions.
4. Capable of full and open duplex, hands-free operation, without the use of handsets, at both the initiating and receiving station.
5. Stations shall connect to a SIP based IP PBX platform in an appropriate secure data processing room.
6. Built-in firewall allows opening or closing of each protocol as user wishes.
7. Web browser-based configuration.
8. May be programmed on site with a standard PC.
9. Stations shall have adaptive jitter buffering.
10. Capable of adding optional features, equipment, and interfaces, even if not initially included.

2.2 IP TOUCH SCREEN DESK MASTER

A. Desk master station equipped with full keypad and touchscreen video display. Uses Android based OS system user interface that is very intuitive, familiar, and easy to use. Station supports H.264 HD or MJPEG video, G.722 & G.729 audio codecs. Capable of Video Conference with other ITSV-2's, Call Forwarding, Call Queuing and Multicast. Provides wired LAN connection to network as well as Bluetooth capability for wireless headset along with WIFI connectivity if needed. DAK key shortcuts can be stored on the touchscreen for quick dialing of stations or features. Connection is to a PoE switch or power injector. Shall be ITSV-2 #1490002010.

1490002010

2.3 IP VIDEO STATION

A. Security Gate and Building Entrances

1. 2N IP Force video intercom with card reader space, Model: 01334-001
2. Zenitel TEIV-4+ Video Intercom with card reader space, Model: **1008318240**

B. Interior Locations

1. 2N IP Base video intercom, Model: 01357-001
2. Zenitel TEIV-4+ Video Intercom with card reader space, Model: **1008318240**

C. Accessories 2N

1. Brick Flush Mounting BoxOrder No.: 01348-001
2. Gooseneck StandOrder No.: 01351-001
3. Installation AdapterOrder No.: 01352-001
4. Mounting
    a. Brick Flush Mounting Box, Model: 01348-001
    b. Plasterboard Flush Mounting Box, Model: 01349-001
    c. Security Screws, Model: 01345-001
    d. Backplate, Model: 01360-001
5. Other Accessories:
    a. External IP Relay - 1 Output, 1 Input, Model: 01397-001
    b. External RFID Card Reader 125kHz + 13.56MHz with NFC (USB), Model: 01400-001

D. Accessories Zenitel

1. Turbine Extended Flushmount Backbox, Model: TA-34
2. Turbine Extended On-wall Backbox, Model: TA-33 (Back of House locations only)

2.4 AREA OF REFUGE

A. Zenitel TCIS-C1, IP and SIP Intercom, Model: 1008111901

B. Accessories

1. Bracket for US 2 GANG Double Depth Back Box, TA-5

2.5 IP SPEAKERS

A. PA IP CEILING SPEAKER. This IP ceiling speaker shall be individually addressable and ideal for applications that only require a limited number of speakers. PoE capable and provides 10 watts of output power. Remote software upgrade & configuration is done via built in web server. Shall be IP Ceiling Speaker ELSIR-10C #1023300010.

1023300010

B. PA IP HORN SPEAKER. This IP horn loudspeaker shall be individually addressable and ideal for applications that only require a limited number of speakers. PoE capable and provides 10 watts of output power. Remote software upgrade, configuration is done via built in web server. Shall be IP Horn Speaker ELSII-10H #1023301310.

1023301310

PART 3 - EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly constructed and prepared.
B. If substrate preparation is the responsibility of another installer, notify Architect in writing of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.
B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions, approved submittals and in proper relationship with adjacent construction.

1. Install equipment firmly secured, plumb, and level.
2. Splices shall be in easily accessible junction boxes or on terminal boards.
3. Cable runs shall be tagged and identified at main terminal board and junction boxes.
4. Product should be configured in accordance with manufacturer-supplied hardening guide. Systems for which the manufacturer does not provide a hardened installation option are not be acceptable.

3.4 START-UP AND TESTING

A. Include all software necessary for system configuration.
B. Turn on system and make adjustments as necessary to meet indicated requirements.
C. Program system to function as specified.
D. Provide documentation of directory numbers, feature codes, and special programming.
E. Test system to assure audio server and all components, stations, speakers, and accessories are working properly.

3.5 DEMONSTRATION

A. Conduct up to four hours of instruction in use and operation of the system to designated owner representatives.
B. Conduct up to four hours of technical training, programming.
C. Program system to function as specified.
D. Provide documentation of directory numbers, feature codes, and special programming.
E. Test system to assure audio server and all components, stations, speakers, and accessories are working properly.

3.6 CLEANING AND PROTECTION

A. Clean products in accordance with the manufacturer’s recommendations.
B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

SECTION 28 16 00 – INTRUSION DETECTION SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes intrusion detection with communication links to perform monitoring, alarm, and control functions.

B. This Section includes the following:

1. Intrusion Detection System
2. Door contacts
3. Glass breaks
4. Motion sensors
5. Duress buttons

1.2 RELATED SECTIONS

A. Section 260500 “Electrical Conduits – Security Supplement” provide conduit system requirements for security systems listed.

B. Section 280500.01 “Common Work Results for Electronic Security” provides overarching requirements for security systems (Access Control, and Intrusion Detection).

C. Section 280513.01 “Conductors and Cables for Electronic Security" for cabling between master control units and field-mounted devices and control units.

D. Section 281300 “Access Control System” that are used to control access to and throughout the facility and provide audit and reporting for all subsystems listed.

E. Section 281600 “Intrusion Detection System” are used to sense intruders and notify monitoring station of the intrusion event.

1.3 DEFINITIONS

A. Control Unit: System component that monitors inputs and controls outputs through various circuits.

B. Master Control Unit: System component that accepts inputs from other control units and may also perform control-unit functions. The unit has limited capacity for the number of protected zones and is installed at an unattended location or at a location where it is not the attendant's primary function to monitor the security system.

C. Monitoring Station: Facility that receives signals and has personnel in attendance at all times to respond to signals. A central station is a monitoring station that is listed.

D. Standard Intruder: A person who weighs 100 lb (45 kg) or less and whose height is 60 inches (1525 mm) or less; dressed in a long-sleeved shirt, slacks, and shoes.

E. Standard-Intruder Movement: Any movement, such as walking, running, crawling, rolling, or jumping, of a "standard intruder" in a protected zone.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Detail assemblies of standard components that are custom assembled for specific application on this Project.

1. Raceway Riser Diagrams: Detail raceway runs required for intrusion detection. Include designation of devices connected by raceway, raceway type and size, and type and size of wire and cable fill for each raceway run.

2. UPS: Sizing calculations.

3. Site and Floor Plans: Indicate final outlet and device locations, routing of raceways, and cables inside and outside the building.

4. Master Control-Unit Console Layout: Show required artwork and device identification.

5. Device Address List: Coordinate with final system programming.

6. System Wiring Diagrams: Include system diagrams unique to Project. Show connections for all devices, components, and auxiliary equipment. Include diagrams for equipment and for system with all terminals and interconnections identified.

7. Details of surge-protection devices and their installation.

8. Sensor detection patterns and adjustment ranges.

C. Equipment and System Operation Description: Include method of operation and supervision of each component and each type of circuit. Show sequence of operations for manually and automatically initiated system or equipment inputs. Description must cover this specific Project; manufacturer's standard descriptions for generic systems are unacceptable.

D. Samples: For units with factory-applied color finishes.

1.5 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

B. Warranty: Sample of special warranty.

C. Contractor to provide system submittals per requirements in Specifications Section 013300.

D. Follow installer qualifications submittal requirements identified in Section 28 05 00.01.

1.6 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

B. Contractor to provide system submittals per requirements in Specifications Section 013300.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Contractor to provide system submittals per requirements in Specifications Section 013300.

2. Intrusion Detection Devices: Furnish quantity equal to five percent of the number of units of each type installed, but no fewer than one of each type.

3. Fuses: Three of each kind and size.

4. Tool Kit: Provide six sets of tools for use with security fasteners, each packaged in a compartmented kit configured for easy handling and storage.

5. Security Fasteners: Furnish no fewer than 1 box for every 50 boxes or fraction thereof, of each type and size of security fastener installed.

1.8 QUALITY ASSURANCE

A. Installer Qualifications:

1. An employer of workers, at least one of whom is a technician certified by the National Burglar & Fire Alarm Association.

2. Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.

B. Testing Agency Qualifications: Member company of NETA or an NRTL.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Control Units, Devices, and Communications with Monitoring Station: Listed and labeled by a qualified testing agency for compliance with SIA CP-01.

E. FM Global Compliance: FM-Approved and -labeled intrusion detection devices and equipment.

F. Comply with NFPA 70.

1.9 PROJECT CONDITIONS

A. Environmental Conditions: Capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

1. Altitude: Sea level to 600 feet (1220 m)

2. Master Control Unit: Rated for continuous operation in an ambient of 60 to 85 deg F (16 to 29 deg C) and a relative humidity of 20 to 80 percent, noncondensing.

3. Interior, Controlled Environment: System components, except master control unit, installed in temperature-controlled interior environments shall be rated for continuous operation in ambients of 36 to 122 deg F (2 to 50 deg C)] dry bulb and 20 to 90 percent relative humidity, noncondensing.

4. Interior, Uncontrolled Environment: System components installed in non-air-conditioned interior environments shall be rated for continuous operation in ambients of 0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and 20 to 90 percent relative humidity, noncondensing.

5. Exterior Environment: System components installed in locations exposed to weather shall be rated for continuous operation in ambients of minus 30 to plus 122 deg F (minus 34 to plus 50 deg C) dry bulb and 20 to 90 percent relative humidity, condensing. Comply with UL 294 and UL 639 for outdoor-use equipment. Rate for continuous operation when exposed to rain as specified in NEMA 250, winds up to 85 mph (137 km/h) and snow cover up to 24 inches (610 mm) thick.

6. Hazardous Environment: System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers or flyings shall be rated, listed, and installed according to NFPA 70.

1.10 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer and Installer agree to repair or replace components of intrusion detection devices and equipment that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Two (2) years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANAUFACTURERS

A. Intrusion Detection System
1. Bosch 8512 Series Intrusion Detection System (Typical Components)
a. Bosch B9512G-C Kit
b. Bosch D1640 Transformer
c. Bosch B426 IP Ethernet Interface
d. Bosch B942 Color Touch Screen Keypad
e. Bosch B208 8 Zone Expander Module
f. Bosch B308 8 Relay Module
g. Bosch B520C Auxiliary Power Supply

B. General Requirements
1. Furnish and install a complete Intrusion Detection/ Access Control system with the performance criteria detailed in this specification. The system shall be inclusive of all necessary functions, monitoring, and control capability as detailed herein and on accompanying Shop drawings.
2. On-site or remote video monitoring Heating, air conditioning, and lighting management Temperature threshold detection and monitoring Humidity threshold detection and monitoring

3. Pressure threshold detection and monitoring Power loss detection and monitoring, generator switching Leak detection and monitoring Carbon Monoxide detection and monitoring
4. Tank level threshold detection and monitoring
5. This specification document provides the requirements for the installation, programming, and configuration of a complete Bosch panel. This system shall include, but not be limited to:
6. Control panel System cabinet Power supply
7. Digital Signaling Line Circuits (SLC) Notification Appliance Circuits (NAC) Annunciator/keypad bus
   a. Batteries Wiring Conduit
   b. Associated peripheral devices
   c. Other relevant components and accessories required to furnish and install a complete and operational addressable system.

C. Standards
1. The system shall be listed as a Power Limited Device and be listed under the standards below. Each system shall be supplied with complete details on all installation criteria necessary to meet all of the listings.

Burglary Listings	**U.S. Government Standards/Listings**
• UL 1023 Household Burglar Alarm System Units	• Meets ICD 705 Chapter 7 Intrusion Detection Systems (IDS)
• UL 1076 Proprietary Burglar	• Meets DoD/NIST SCIF Standards
• UL 1610 Central Station Burglar Alarm Units	• NIST Validated XR550E Encrypted Panel
• UL 1635 Digital Burglar Alarm Communicator System Units	**Intertek (ETL) Certifications**
Fire Listings	• EN 50130-4 EMC Product Family Standard: Immunity Requirements for Components of Fire, Intruder and Social Alarm Systems
• UL 985 Household Fire Warning	• EN 50130-5 Environmental Standards
• UL 864 Commercial Fire Warning	• EN 50131-1:2006+A1 Intrusion and hold-up systems
Access Control Listings	• EN 50131-3:2009 Control and Indicating Equipment
• UL 294 Access Control System Units	• EN 50131-5 Interconnections Equipment using Radio Frequency techniques
Related Standards	• EN 50131-6:2008 Power Supplies
• NFPA 70 National Electric Code (NEC)	• EN 50133-1:1997 Access Control Systems
• NFPA 72 Household Fire Warning	• EN 50136-1 Alarm Transmission Systems and Equipment
• System Monitors	• EN 50136-2:2013 Supervised Premises Transceiver
• System Events	• EN 50136-3 Receiving Centre Transceiver
	• EN 50131-6 Power Supplies

2. Americans with Disabilities
   a. All indicating and notification appliances shall comply with the Americans with Disabilities Act (ADA) requirements.

2.2 FUNCTIONAL DESCRIPTION OF SYSTEM

A. Description: Hard-wired, modular, microprocessor-based controls, intrusion sensors and detection devices, and communication links to perform monitoring, alarm, and control functions.

B. Supervision: System components shall be continuously monitored for normal, alarm, supervisory, and trouble conditions. Indicate deviations from normal conditions at any location in system. Indication includes identification of device or circuit in which deviation has occurred and whether deviation is an alarm or malfunction.

1. Alarm Signal: Display at master control unit and actuate audible and visual alarm devices.

2. Trouble Condition Signal: Distinct from other signals, indicating that system is not fully functional. Trouble signal shall indicate system problems such as battery failure, open or shorted transmission line conductors, or control-unit failure.

3. Supervisory Condition Signal: Distinct from other signals, indicating an abnormal condition as specified for the particular device or control unit.

C. System Control: Master control unit shall directly monitor intrusion detection units and connecting wiring.

D. System shall automatically reboot program without error or loss of status or alarm data after any system disturbance.

E. Operator Commands:

1. Help with System Operation: Display all commands available to operator. Help command, followed by a specific command, shall produce a short explanation of the purpose, use, and system reaction to that command.

2. Acknowledge Alarm: To indicate that alarm message has been observed by operator.

3. Place Protected Zone in Access: Disable all intrusion-alarm circuits of a specific protected zone. Tamper circuits may not be disabled by operator.

4. Place Protected Zone in Secure: Activate all intrusion-alarm circuits of a protected zone.

5. Protected Zone Test: Initiate operational test of a specific protected zone.

6. System Test: Initiate system-wide operational test.

7. Digital reports.

F. Timed Control at Master Control Unit: Allow automatically timed "secure" and "access" functions of selected protected zones.

G. Digital Record of Events: Digital a record of alarm, supervisory, and trouble events on system. Sort and report by protected zone, device, and function. When master control unit receives a signal, digitally send a report of alarm, supervisory, or trouble condition. Report type of signal (alarm, supervisory, or trouble), protected zone description, date, and time of occurrence. Differentiate alarm signals from other indications. When system is reset, report reset event with

the same information concerning device, location, date, and time. Commands shall initiate the reporting of a list of current alarm, supervisory, and trouble conditions in system or a log of past events.

H. Response Time: Two seconds between actuation of any alarm and its indication at master control unit.

I. Circuit Supervision: Supervise all signal and data transmission lines, links with other systems, and sensors from master control unit. Indicate circuit and detection device faults with both protected zone and trouble signals, sound a distinctive audible tone, and illuminate an LED. Maximum permissible elapsed time between occurrence of a trouble condition and indication at master control unit is 20 seconds. Initiate an alarm in response to opening, closing, shorting, or grounding of a signal or data transmission line.

J. Programmed Secure-Access Control: System shall be programmable to automatically change status of various combinations of protected zones between secure and access conditions at scheduled times. Status changes may be preset for repetitive, daily, and weekly; specially scheduled operations may be preset up to a year in advance. Manual secure-access control stations shall override programmed settings.

K. Manual Secure-Access Control: Coded entries at manual stations shall change status of associated protected zone between secure and access conditions.

2.3 SYSTEM COMPONENT REQUIREMENTS

A. Surge Protection: Protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads. Include surge protection for external wiring of each conductor entry connection to components.

1. Minimum Protection for Power Lines 120 V and More: Auxiliary panel suppressors complying with requirements in Section 280500.01 "Common Work Results for Electronic Security."

2. Minimum Protection for Communication, Signal, Control, and Low-Voltage Power Lines: Listed and labeled by a qualified testing agency for compliance with NFPA 731.

B. Intrusion Detection Units: Listed and labeled by a qualified testing agency for compliance with UL 639.

C. Interference Protection: Components shall be unaffected by radiated RFI and electrical induction of 15 V/m over a frequency range of 10 to 10,000 MHz and conducted interference signals up to 0.25-V rms injected into power supply lines at 10 to 10,000 MHz.

D. Tamper Protection: Tamper switches on detection devices, control units, annunciators, pull boxes, junction boxes, cabinets, and other system components shall initiate a tamper-alarm signal when unit is opened or partially disassembled and when entering conductors are cut or disconnected. Master control-unit alarm display shall identify tamper alarms and indicate locations.

E. Self-Testing Devices: Automatically test themselves periodically, but not less than once per hour, to verify normal device functioning and alarm initiation capability. Devices transmit test failure to master control unit.

F. Antimasking Devices: Automatically check operation continuously or at intervals of a minute or less, and use signal-processing logic to detect blocking, masking, jamming, tampering, or other operational dysfunction. Devices transmit detection of operational dysfunction to master control unit as an alarm signal.

G. Addressable Devices: Transmitter and receivers shall communicate unique device identification and status reports to master control unit.

H. Remote-Controlled Devices: Individually and remotely adjustable for sensitivity and individually monitored at master control unit for calibration, sensitivity, and alarm condition.

2.4 ENCLOSURES

A. Interior Sensors: Enclosures that protect against dust, falling dirt, and dripping noncorrosive liquids.

B. Interior Electronics: NEMA 250, Type 12.

C. Screw Covers: Where enclosures are readily accessible, secure with security fasteners of type appropriate for enclosure.

2.5 GENERAL COMPONENT REQUIREMENTS

A. System Description
1. The system areas and zones shall be programmable, and the system shall store, log, display, and transmit specific custom designations for system areas, zones, and user names.
2. To ensure continued, one-call support, the system shall be constructed of sensing components provided directly by the system manufacturer, such as power supplies, motion detectors, door and window position switches, glass break detectors, or other sensing devices that the manufacturer offers.
3. The system controller, user interfaces, zone input devices, relay output devices, and the system signal receiving equipment shall be engineered, manufactured, assembled, and must be distributed from a location within the United States of America.
4. The system shall support user interaction by way of a keypad, web browser, system software, key switch, or radio frequency wireless control, Text messaging, or Smart Phone Application using integrated or auxiliary devices provided by the system manufacturer.
5. The system shall support controller zone input connections, system keypads, system zone expansion modules, and wireless zone input modules, and must support zone input connections by way of at least two competitive products. The system shall offer a seamless integrated compatibility with hard-wire and/ or wireless zone expansion equipment for at least 500 wireless zones and/ or a maximum of 574 hardwired zones.
6. The system shall be capable of offering up to five zone expansion buses, each of which can support the connection of up to 15,000 feet of four-wire cable. Zone expansion and keypad data buses that exceed 2,500 feet of cable must include splitter/repeater modules to boost data voltage and maintain data integrity.
7. The system shall provide a seamless capability to provide up to 506 addressable relays, which can be located at any connection location upon a zone expansion bus.
8. System relay outputs shall have the capability of being triggered as a result of a command from the user interface, changes in system status, changes in zone status, or by a programmable schedule.

9. System relay output states shall be programmable for momentary, maintained, pulsed, or must follow the state of an associated system zone input.
10. The system shall be completely programmable either locally from a keypad or remotely through a standard dial- up, and network connections by way of a LAN, WAN, and/or by way of the Internet, cellular communications paths.
11. The control unit shall be completely programmable remotely using remote annunciators, and/ or using upload/ download software that communicates using SDLC 300 baud, 2400 baud, or IP Addressed data network. On-site programming from a personal computer shall also be permitted.
12. The control unit shall be equipped with an anti-reversing circuit breaker to prevent damage due to accidental reversal of battery leads.

B. Input/Output Capacity
1. This system shall be capable of monitoring a maximum of 574 individual zones and controlling a maximum of 506 output relays.
2. The control panel shall have, as an integral part of the assembly, 2 SPDT Form C relays rated at 1 Amp at 30 VDC and four open collector 12 VDC outputs rated at 50mA each. It shall also have the capacity of a maximum of 125 output expander modules with 500 switched ground, open collector outputs, 50mA maximum and 506 auxiliary relays (Form C rated at 1.0 Amp at 30 VDC).
3. The panel shall also provide 99 programmable output profiles for schedules, and include an integral bell alarm circuit providing at least 1.5 Amps of steady, pulsed, or temporal bell output. Output type shall be programmable by zone type. Relays and voltage outputs shall be capable of being independently programmed to turn on and/or off at selected times each day.
4. The system shall be capable of supporting and controlling up to 140 Z-Wave devices and up to 20 Z-Wave Favorites for group control.

C. User Authorization Capacity
1. The system shall be capable of operation by 10,000 unique Personal Identification Number (PIN) codes with each code having one (1) of ninety-nine (99) custom user profiles. This allows for limitation of certain functions to authorized users. The operation of all keypads shall be limited to authorized users.

D. Keypads
1. The system shall support a maximum of sixteen (16) keypads on XR550 series with alphanumeric display. Each keypad shall be capable of arming and disarming any system area based on a pass code or Proximity key authorization. The keypad alphanumeric display shall provide complete promptmessages during all stages of operation and system programming and display all relevant operating and test data.
2. Communication between the control panel and all keypads and zone expanders shall be multiplexed over a non- shielded multi-conductor cable, as recommended by the manufacturer. This cable shall also provide the power to all keypads, zone expanders, output expanders, and other power consuming detection devices.
3. If at any time a keypad does not detect polling, the alphanumeric display shall indicate “SYSTEM TROUBLE”. If at any time two devices are programmed for the same address, the alphanumeric keypad shall display “4 WIREBUS TROUBLE”. If at any time a keypad detects polling but not for its particular address, the alphanumeric display shall indicate “NON POLLED ADDR”. The system shall display all system troubles at selected keypads with distinct alphanumeric messages.
4. The keypad shall include self-test diagnostics enabling the installer to test all keypad functions: display test, key test, zone test, LED test, relay test, tone test, and address test.

5. The keypad shall provide an easy-to-read English text display. The text shall exactly match the text seen inall software reports, keypad displays, and central station reports.
6. The keypad user interface shall be a simple-to-use, menu-driven help system that is completely user friendly.
7. The control panel shall support a keypad interface accessible on the World Wide Web in a browser window. The web-accessible keypad interface shall provide at least five (5) programmable hyperlinks for camera access or other use.

E. Zone Configuration
1. A minimum of 4 Class B ungrounded zones shall be available at each keypad or zone expander on the system. The system shall have the capacity for a maximum of sixteen (16) keypads and a maximum of 125 four (4) zone expanders or 500 single zone expanders on the XR550. It shall also have the capacity of a maximum of 125 supervised relay output expanders. The XR150 shall have the capacity for a maximum of eight (8) keypads and a maximum of 25 four (4) zone expanders It shall also have the capacity of a maximum of 25 supervised relay output expanders. All Class B zones shall be 2-wire, 22 AWG minimum, supervised by an end-of-line (EOL) device and shall be able to detect open and short conditions in excess of 500ms duration.
2. Each zone shall function in any of the following configurations: Night, Day, Exit, Fire, Supervisory, Emergency, Panic, Auxiliary 1, Auxiliary 2, Fire Verification, Cross Zone, Priority, and Key Switch Arming.
3. The digital SLCs and the annunciator/keypad bus shall be able to operate at a maximum wiring distance of 2500 feet from the control panel on unshielded, non-twisted cable. This distance may be extended to a total of 15,000 feet when bus repeater modules are installed.
4. Each zone shall function in any of the following configurations:

Night	Supervisory	Auxiliary 1	Cross-Zone
Day	Emergency	Auxiliary 2	Priority
Exit	Panic	Fire Verifica-tion	Arming
Fire	Doorbell	CO	

F. Communications
1. The system shall be capable of signaling to as many as 8 remote monitoring station receivers. Seven (7) of the eight (8) paths shall be capable of being assigned as either a “primary” or “backup” path. In such a manner the system shall have multiple primary paths to multiple remote monitoring stations as well as multiple backup paths to multiple monitoring stations.
2. The system shall employ Adaptive Technology that allows a Backup communication path programmed for Network or Cellular to automatically ADAPT to the faster check-in rate of the Primary path should the Primary path become unavailable. This creates a seamless transition for communication.
3. The system shall be capable of dialing up to (2) remote monitoring station receivers, four telephone numbers of 32 digits each using two separate switched telephone network lines such that if two unsuccessful attempts are made on the first line to the first number, the system shall make two attempts on first line to the second number. If these two attempts are unsuccessful, the system shall make two further attempts on the first line of the first number. After the tenth unsuccessful attempt, dialing shall stop and the alphanumeric keypad shall display trouble. Should another event occur that requires a

report to be transmitted, the dialing sequence shall be repeated. The system shall have a programmable option to dial a second set of telephone numbers after the first ten attempts using the same sequence.

4. The system shall be capable of communication using the IBM Synchronous Data Link Control format, and atleast one other standard industry format.
5. The system shall be capable of supporting Network communication with digital dialer backup, existing Ethernet data networks, satellite communication, fiber optic networks, local area networks, wide area networks, cellular communication, and retail data networks.

G. Network Communications

1. The control panel shall be capable of asynchronous network communication with a retry time between 2 and 240 minutes and a fail time of 2 and 240 minutes. If communication is unsuccessful the control panel shall be capable of attempting backup communication through any of the available communication methods to thesame receiver or a backup receiver.
2. The control panel shall employee adaptive communication technology. Adaptive Technology allows a Backup communication path programmed to use Network or Cellular to automatically ADAPT to the faster check-in rate of the Primary path should the Primary path become unavailable, creating a seamless transition for communication of messages. Select Adapt when programming the Checkin option. This allows a system to be fully supervised even if a path fails, while also keeping wireless charges low when the network isgood.
3. Network communication between the control panel and the receiver shall be in a proprietary communication format.
4. The control panel shall be capable of supporting Dynamic Host Communication Protocol (DHCP) Internet Protocol (IP) addressing.
5. Underwriters Laboratories (UL) shall list network communication by the control panel for Standard orEncrypted Line Security.
6. The control panel shall be capable of two-way network communication using standard Ethernet 10/100 BaseT in a LAN, WAN, or Internet configuration.
7. The control panel shall be capable of communication by means of a 128- & 256-Bit AES (Advanced Encryption Standard) Encryption process certified by NIST (National Institute of Standards and Technology) to an SCS-1R receiver with a built-in Encryption Alarm Router or SCS-VR.
8. The control panel shall be capable of meeting ICD 705 Chapter 7 Intrusion Detection Systems (IDS) and UL 2050 standards.
9. The control panel shall be capable of sending text messaging to up to three Cellular Phone Numbers using cellular communications.
10. The control panel shall be capable of sending the following Text messages:

Zone Alarms by Zone Name	AC Power Trouble and Restoral
Zone Troubles by Zone Name	System Low Battery
Zone Bypass by User	Ambush
Arming (Closings) by User	Abort, Cancel and Alarm Verified by User
Disarming (Openings) by User	Check-in by user
Late to Close	

H. Component Enclosure

1. Housings; power supply enclosures, terminal cabinets, control units, and other component housings, collectively referred to as enclosures shall be so formed and assembled as to be sturdy and rigid. If sheet steel is used in the fabrication of enclosures,

it shall be not less than an 18-gauge door with a 20-gauge box frame. Where exposed pins, the hinges shall be of the tight pin type or the ends of hinge pins shall be tack welded to prevent ready removal. Doors having a latch edge length of less than 24 inches shall be provided with a single lock. Where the hinged door latch edge is 24 inches or more in length, doors shall be provided with three-point latching device with lock; or alternatively with two locks, one located near each end. For SCIF and High Security applications an attack proof enclosure with proper tampers listed for use with the XR150/XR550 with Network and Encryption shall be used.

I. Electronic Components

1. All system electronic components shall be solid-state type, mounted on printed circuit boards. Light duty relays and similar switching devices shall be solid-state type or electromechanical.
2. The panel shall have an over current notification LED that lights when devices connected to the Keypad Bus and Loop Expansion LX-Bus(es) draw more current than the panel is rated for. When the over current LED lights, the Loop Expansion LX-Bus (es) and Keypad bus are shut down.

J. Control Unit

1. A battery test shall be automatically performed to test the integrity of the standby battery. The test shall disconnect the standby battery from the charging circuit and place a load on the battery. This test shall be performed no more than every 180 seconds.
2. The control unit shall be capable of operating and supervising notification appliance devices as well as addressable initiating detection devices and an integrated supervised dual line digital communicator.
3. Control unit must be “Flash ROM” updatable, and program must be held in non-volatile RAM. The panel shall be able to function while the update is in process.
4. Control unit shall be capable of operating using an optional built in Encrypted Alarm Router for SCIF (Sensitive Compartmented Information Facility) applications that is certified by NIST (National Institute of Standards and Technology) for 128- & 256-Bit AES (Advanced Encryption Standard) Encryption communications.
5. The optional built-in Encrypted Alarm Router shall be capable of compliance with ICD 705 Chapter 7 Intrusion Detection Systems (IDS) and UL 2050 standards.

K. Remote Annunciators

1. The system shall support a maximum of sixteen (16) supervised remote annunciators with the identical capabilities, functions and display layout. Operation of the remote annunciators shall be limited to authorized users by the use of a code or key.
2. The remote annunciators shall be capable of operating at a maximum wiring distance of 15,000 feet from the control unit on unshielded, non-twisted cable.

L. Control Designations

1. Controls shall be provided to ensure ease of operation of all specified characteristics. Where applicable, clockwise rotation of controls shall result in an increasing function. Controls, switches, visual signals and indicating devices, input and output connectors, terminals and test points shall be clearly marked or labeled on the hardware to permit quick identification of intended use and location.

M. Test Modes

1. The system shall include a provision that permits testing from any alphanumeric keypad. The test shall include standby battery, alarm bell or siren, and communication to the central station.

2. The system shall include a provision for an automatic, hourly, daily, weekly, thirty (30) day, or up to sixty (60) day communication link test from the control panel installation site to the central station.
3. The system shall include a provision for displaying the internal system power and wiring conditions. Internal monitors shall include the bell circuit, AC power, battery voltage level, charging voltage, panel box tamper, phone trouble line 1, phone trouble line 2, transmit trouble, and network trouble.

N. Power Supplies

1. Power supplies for the control unit shall operate from 120 VAC, supplied at the respective protected areas. Standby batteries shall be supplied to power the system in the event of a utility power failure. Batteries shall be sized to provide 105% capacity for eight hours. Standby batteries shall be sealed lead-acid. Power supplies shall be all Solid State.
2. Controls shall be designed to maintain full battery charge when alternating current is available. Batteries shall be recharged to 85% capacity within 24 hours from battery use. The system shall be automatically transferred to battery power upon loss of alternating current power and return to alternating current power upon restoration. Intrusion alarms shall not be initiated during switch over; a signal shall be initiated upon failure of battery or alternating current power.
3. Approved power supplies shall meet or exceed the following power supply model specifications: UL Listed DMP 505-12: 12VDC 5 Amp with transformer and enclosure.

O. Software

1. The system shall interface with computer software with the capability to fully program the panel by connecting to the panel through:
2. Direct cable connection interface card Receiver phone line connection Standard phone line connection Ethernet network connection

P. Network connection across the Internet

1. The system shall interface with computer software capable of locking down all controlled doors.
2. The system shall interface with computer software capable of monitoring and logging all events.
3. The system shall interface with computer software or Cloud-based managed software or mobile app accessible by a standard web browser using a login and password and requiring the system user code or PIN code upon remote login to be capable of exporting reports in the following file formats:
    a. Excel Spreadsheet (.xls)
    b. Comma-separated (.csv)

4. The system shall interface with computer software capable of printing custom, filtered reports including:
    a. All Events
    b. Door Access Granted
    c. Zone Action
    d. Door Access Denied
    e. Arming/Disarming
    f. Opening/Closing Schedule Changes
    g. Area Late to Close
    h. System Monitors
    i. User Code Changes
    j. System Events

Q. INTEGRATION
1. Genetec Security Center

2.6 SENSORS

A. 360 Degree Dual-tech Motion Sensor
1. Acceptable Manufacturers
a. Bosch
b. Approved Equivalent
2. Bosch DS9370 and DS9371 or approved equivalent.
3. Minimum Features and Specifications
a. Up to 25 ft (7.6 m) mounting height
b. 360 degrees x 70 ft (20 m) diameter pattern
c. Fully-adjustable optical arrays for coverage customization
d. Rated for use in difficult environment to reduce false alarms from background disturbances such as air movement and hanging signs.
e. Combination of passive infrared (PIR) detection, microwave detection, and advanced signal processing technology.
f. Built-in tamper switch
g. Operating Temperature: -40 to 120 deg F (-40 to 49 deg C)
h. Dimensions: 3.5 x 7 in (8.9 x 17.8 cm)
i. Voltage: 9 to 15 VDC
j. UL Listed

B. Directional Dual-tech Motion Sensor
1. Acceptable Manufacturers
a. Bosch
b. Approved Equivalent
2. Bosch ISC-CDL1-WA15G or approved equivalent
3. Minimum Features and specifications
a. Combination of passive infrared (PIR) detection, microwave detection, and advanced signal processing technology.
b. Active infrared ant-masking
c. Microwave noise adaptive processing
d. Mounting height: 7.5 x 9 ft (2.3 x 2.75 m)
e. Coverage Pattern: 50 x 50 ft (15 x 15 m)
f. Built-in tamper switch
g. Operating Temperature: 32 to 120 deg F (0 to 49 deg C)
h. Dimensions: 4.7 x 2.75 x 2.2 in (12 x 7 x 5.5 cm)
i. Voltage: 9 to 15 VDC
j. UL Listed

C. Curtain PIR Motion Sensor
1. Acceptable Manufacturers
a. Honeywell
b. Approved Equivalent
2. Honeywell IS216T-CUR or approved equivalent
3. Minimum Features and specifications
a. Dual element passive infrared
b. Mounting height: 5 x 8.8 ft (1.5 x 2.7 m)
c. 32 ft (10 m) in vertical mount position
d. Operating temperature: 14 to 131 deg F (-10 to 55 deg C)

e. Dimensions: 3.4 x 2.4 x 1.5 in (8.6 x 6 x 3.8 cm)
f. Supply Voltage: 8.5 to 15.4 VDC (12 VDC nominal)

D. Long-range Dual-tech Motion Sensor
1. Acceptable Manufacturers
a. Honeywell
b. Approved Equivalent
2. Honeywell DT900 or approved equivalent
3. Minimum Features and specifications
a. Combination of passive infrared (PIR) detection, microwave detection, and advanced signal processing technology.
b. Mounting height: 2 to 3.7 m (6 to 12 ft)
c. Coverage Pattern:
1) 50 x 40 ft (15 x 12 m), and 90 x 70 ft (27 x 21 m)]
d. Built-in housing tamper switch
e. DT900: Anti-masking using active infrared look-down lens]
f. DT900: Detector mount tamper switches (2)]
g. Operating Temperature: 32 to 120 deg F (0 to 49 deg C)
h. Dimensions: 8 x 6.5 x 6 in (20 x 17 x 15 cm)
i. Voltage: 10 VDC to 15 VDC, 12 VDC nominal
j. UL Listed

E. Long-range PIR
1. Acceptable Manufacturers
a. Bosch
b. Approved Equivalent
2. Bosch DS778 Long Range PIR Detector or approved equivalent
3. Minimum Features and specifications
a. Mounting height: 6.5 x 8.5 ft (2 x 2.6 m)
b. Coverage: 200 x 15 ft (60 x 4.5 m)
c. Built-in tamper switch
d. Operating Temperature: -40 to 120 deg F (-40 to 49 deg C)
e. Dimensions: 5.75 x 3.75 x 2.5 in (14.6 x 9.5 x 6.35 cm)
f. Voltage: 6 to 15 VDC
g. UL Listed

F. Glass Break Detector, Acoustic
1. Acceptable Manufacturers
a. Honeywell
b. Approved Equivalent
2. Honeywell FG-730 or approved equivalent
3. Minimum Features and specifications
a. Analysis of both impact and shattering frequencies
b. Signal verification
c. Coverage: 30 ft (90 m), minimum glass size: 11 x 11 in (27.9 x 27.9 cm)
d. Operating temperature: 32 to 120 deg F (0 to 49 deg C)
e. Supply Voltage: 10 to 14VDC (12 VDC nominal)
f. Mounting locations: Ceiling, opposite wall, adjoining wall, same wall as glass

G. Door Position Switch; Recessed
1. Acceptable Manufacturers
a. Magnasphere
b. Approved Equivalent

2. Magnasphere MSS-20 Series, MSS-26 Series for Normally Closed Loop or approved equivalent
3. Magnasphere MSS-19 Series, MSS-25 Series for Normally Open Loop or approved equivalent
4. Minimum Features and Specifications
    a. UL 634 Listed
    b. Recessed
    c. Magnetic tamper
    d. 0.75 in (19 mm) or 1 in (25.4 mm) diameter
    e. Capable of operating with a 0.5 in (13 mm) gap
    f. Screw Terminals or 12 in (305 mm) wire leads, #22 AWG, solid

H. Door Position Switch; Surface
1. Acceptable Manufacturers
    a. Magnasphere
    b. Approved Equivalent
2. Magnasphere MSS-30XS Series or approved equivalent
3. Minimum Features and Specifications
    a. UL 634 Listed
    b. Surface mounted
    c. Magnetic tamper
    d. Size: 2 x 0.5 x 1 in (51 x 12.7 x 25.4 mm).
    e. Capable of operating with a 0.3 in (7.6 mm) gap
    f. Armored cable lead 24 in (61 mm)
    g. Only for use on hatches where a standard recessed contact cannot be used

I. Door Position Switch; Overhead
1. Acceptable Manufacturers
    a. Magnasphere
    b. Approved Equivalent
2. Magnasphere MSS-105S or approved equivalent
3. Minimum Features and Specifications
    a. UL 634 listed
    b. Surface Mounted with overhead door bracket
    c. Capable of operating with a 0.5 inch gap
    d. Magnetic tamper
    e. 5 ft (1.5 m) leads

J. Door Position Switch, UL Level 1, Surface
1. Acceptable Manufacturers
    a. Magnasphere
    b. Approved Equivalent
2. Magnasphere HS-L1.5 Series or approved equivalent
3. Minimum Features and Specifications
    a. UL 634, Level 1 high security (both in-swing and out-swing doors)
    b. Surface mounted
    c. External and internal magnetic tamper
    d. Size: 4.25 x 1 x 1 in (108 x 25.4 x 25.4 mm).
    e. Capable of operating with a 0.25 in (6.35 mm) gap
    f. Wire leads, #22 AWG, solid, in 18 in (457 mm) armored cable
    g. Housing: Aluminum case, silver-gray anodized
    h. Dual alarm contacts – Use for both IDS and ACS (two closed loop or one closed loop / one open loop)

i. NO adjustment required for installation
j. NO brackets needed for most out-swing door installations
k. Integrated removal / pry tamper (no back plates)

K. Door Position Switch; High Security, Recessed
1. Acceptable Manufacturers
a. Magnasphere
b. Approved Equivalent
2. Magnasphere HSS-L2C or HSS-L2C-A or approved equivalent
3. Minimum Features and Specifications
a. UL 634 Level 2 High Security Listed
b. Recessed
c. Integrated Removal Tamper Circuit and hardware, to actuate on removal of
d. switch from mounting surface
e. Used with, or contain embedded End of Line (EOL) resistors compatible with Software House control panels
f. Rated for both indoor and outdoor use
g. Qualify as an Intrinsically Safe - Simple Apparatus.
h. Installable in either a 1 in (25.4 mm) diameter hole or standard ANSI door cutout
i. Capable of operating with a 0.0625 in (1.5875 mm) gap
j. Wire leads, #22 AWG, solid, 12 in (305 mm) length
k. Brass magnet housing, ABS switch housing

L. Door Position Switch; High Security Surface
1. Acceptable Manufacturers
a. Magnasphere
1) Approved Equivalent
2. Magnasphere HSS-L2S Series or approved equivalent
3. Minimum Features and Specifications
a. UL 634, Level 2 listed
b. Surface mounted
c. Integrated Removal Tamper Circuit and hardware, to actuate on removal of
d. switch from mounting surface
e. Used with, or contain embedded End of Line (EOL) resistors compatible with Software House control panels
f. Rated for both indoor and outdoor use
g. Qualify as an Intrinsically Safe - Simple Apparatus.
h. Size: 4.25 x 1.5 x 1 in (108 x 38 x 25.4 mm).
i. Capable of operating with a 0.125 in (3.18 mm) gap
j. Wire leads, #22 AWG, solid, in 36 in (91.4 cm) armored cable
k. Housing: Aluminum case, silver-gray anodized
4. Additional Required Options / Parts
a. HSS Roll-up Door Bracket Kit for use on overhead doors

M. Vibration Detector
1. Acceptable Manufacturers
a. Bosch
b. Approved Equivalent
2. Bosch ISN-SM-80, or approved equivalent.
3. Minimum Features and Specifications
a. 5 m operating radius on concrete
b. Dimensions: 3.5 x 3.5 x .86 in (8.9 x 8.9 x 2.2 cm)
c. Operating temperature: -40 to 158 deg F (-40 to 70 deg C)

d. Supply Voltage: 8 to 16 VDC (12 VDC nominal)

N. Vibration Detector, Solid state
1. Acceptable Manufacturers
   a. George Risk Industries, Inc.
   b. Approved Equivalent
2. GRI Shockgard 1 SG-1 or approved equivalent.
3. Minimum Features and Specifications
   a. 12 in (30.5 cm) operating radius on steel
   b. Dimensions: .91 x .98 x 3.4 in (2.3 x 2.5 x 8.6 cm)
   c. Operating temperature: -4 to 140 deg F (-20 to 60 deg C)
   d. Supply Voltage: 9 to 15 VDC, Regulated

O. Duress Alarm
1. Acceptable Manufacturers
   a. Honeywell
   b. Approved Equivalent
2. Honeywell 269R/270R/269SN or approved equivalent.
3. Minimum Features and Specifications
   a. Switch with a shroud over the activating lever that allows an individual to covertly send a duress signal to master control unit, with no visible or audible indication when activated. Switch shall lock in activated position until reset with a key.
   b. Push Button: Finger activated, suitable for mounting on horizontal or vertical surface.
   c. Latching with key reset
   d. Plunger type DPDT
   e. Switch rating: 0.2A @ 30VDC max
   f. Operating Temperature: 14 to 140 deg F (-10 to 60 deg C)
   g. UL 636 listed
   h. Honeywell 269R: stainless steel cover
   i. Honeywell 270R: plastic case
   j. Honeywell 269SN: stainless steel cover (polling loop only)

P. AUDIBLE AND VISUAL ALARM DEVICES
1. See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers. Retain one of first two paragraphs and list of manufacturers below. See Section 016000 "Product Requirements."
2. Bell: Master control unit 10 inches (254 mm) in diameter, rated to produce a minimum sound output of 84 dB at 10 feet (3 m) from master control unit.
   a. Enclosure: Weather-resistant steel box equipped with tamper switches on cover and on back of box.
3. Klaxon Weatherproof Motor-Driven Hooter: UL listed, rated to produce a minimum sound output of 120 dB at 3 feet (1 m), plus or minus 3 dB, at a frequency of 470 Hz. Rated for intermittent use: two minutes on and five minutes off.
4. Designed for use in industrial areas and in high-noise, severe-weather marine environments.
5. Siren: 30-W speaker with siren driver, rated to produce a minimum sound output of 103 dB at 10 feet (3 m) from master control unit.
   a. Enclosure: Weather-resistant steel box with tamper switches on cover and on back of box.
6. Strobe: Xenon light complying with UL 1638, with a clear polycarbonate lens.
   a. Light Output: 115 cd, minimum.
   b. Flash Rate: 60 per minute.

2.7 SECURITY FASTENERS

A. Operable only by tools produced for use on specific type of fastener by fastener manufacturer or other licensed fabricator. Drive system type, head style, material, and protective coating as required for assembly, installation, and strength.

B. Drive System Types: Pinned Torx-Plus

C. Socket Flat Countersunk Head Fasteners:

1. Heat-treated alloy steel, ASTM F 835 (ASTM F 835M).

2. Stainless steel, ASTM F 879 (ASTM F 879M), Group 1 CW.

D. Socket Button Head Fasteners:

1. Heat-treated alloy steel, ASTM F 835 (ASTM F 835M).

2. Stainless steel, ASTM F 879 (ASTM F 879M), Group 1 CW.

E. Socket Head Cap Fasteners:

1. Heat-treated alloy steel, ASTM A 574 (ASTM A 574M).

2. Stainless steel, ASTM F 837 (ASTM F 837M), Group 1 CW.

F. Protective Coatings for Heat-Treated Alloy Steel:

1. Zinc chromate, ASTM F 1135, Grade 3 or Grade 4, for exterior applications and interior applications where indicated.

2. Zinc phosphate with oil, ASTM F 1137, Grade I, or black oxide unless otherwise indicated.

PART 3 - EXECUTION

3.1 SYSTEM INSTALLATION

A. Comply with UL 681 and NFPA 731.

B. Equipment Mounting: Install master control unit on finished floor with tops of cabinets not more than 72 inches (1830 mm) above the finished floor.

1. Comply with requirements for seismic-restraint devices specified in Section 280500.01 "Common Work Results for Electronic Security."

C. Install wall-mounted equipment, with tops of cabinets not more than 72 inches (1830 mm) above the finished floor.

1. Comply with requirements for seismic-restraint devices specified in Section 280500.01 "Common Work Results for Electronic Security.

D. Connecting to Existing Equipment: Verify that existing perimeter security system is operational before making changes or connections.

1. Connect new equipment to existing control panel in existing part of the building.

2. Connect new equipment to existing monitoring equipment at the Supervising Station.

3. Expand, modify, and supplement existing monitoring equipment as necessary to extend existing monitoring functions to the new points. New components shall be capable of merging with existing configuration without degrading the performance of either system.

E. Security Fasteners: Where accessible to inmates, install intrusion detection components using security fasteners with head style appropriate for fabrication requirements, strength, and finish of adjacent materials except that a maximum of two different sets of tools shall be required to operate security fasteners for Project.

3.2 WIRING INSTALLATION

A. Wiring Method: Install wiring in metal raceways according to Section 260500 "Electrical Conduit (Security Supplement)." Conceal raceway except in unfinished spaces and as indicated. Minimum conduit size shall be 1/2 inch (13 mm). Control and data transmission wiring shall not share conduit with other building wiring systems.

B. Wiring Method: Install wiring in metal raceways according to Section 260500 "Electrical Conduit (Security Supplement)," except in accessible indoor ceiling spaces and in interior hollow gypsum board partitions where cable may be used. Conceal raceways and wiring except in unfinished spaces and as indicated. Minimum conduit size shall be 1/2 inch (13 mm). Control and data transmission wiring shall not share conduit with other building wiring systems.

C. Wiring Method: Cable, concealed in accessible ceilings, walls, and floors when possible.

D. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points. Use lacing bars and distribution spools. Separate power-limited and non-power-limited conductors as recommended in writing by manufacturer. Install conductors parallel with or at right angles to sides and back of enclosure. Connect conductors that are terminated, spliced, or interrupted in any enclosure associated with intrusion system to terminal blocks. Mark each terminal according to system's wiring diagrams. Make all connections with approved crimp-on terminal spade lugs, pressure-type terminal blocks, or plug connectors.

E. Wires and Cables:

1. Conductors: Size as recommended in writing by system manufacturer unless otherwise indicated.

2. 120-V Power Wiring: Install according to Section 260500 "Electrical Conduit (Security Supplement)" unless otherwise indicated.

3. Control and Signal Transmission Conductors: Install unshielded, twisted-pair cable unless otherwise indicated or if manufacturer recommends shielded cable, according to Section 280513 "Conductors and Cables for Electronic Safety and Security."

4. Data and Television Signal Transmission Cables: Install according to Section 280513 "Conductors and Cables for Electronic Safety and Security."

F. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

G. Install power supplies and other auxiliary components for detection devices at control units unless otherwise indicated or required by manufacturer. Do not install such items near devices they serve.

H. Identify components with engraved, laminated-plastic or metal nameplate for master control unit and each terminal cabinet, mounted with corrosion-resistant screws. Nameplates and label products are specified in Section 260500 "Electrical Conduits (Security Supplement) and 280513.01 Conductors and Cabling for Electronic Security."

3.3 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with identification requirements in Sections 260500 "Electrical Conduits (Security Supplement) and 280513.01 Conductors and Cabling for Electronic Security."

B. Install instructions frame in a location visible from master control unit.

3.4 GROUNDING

A. Ground the master control unit and associated circuits; comply with IEEE 1100. Install a ground wire from main service ground to master control unit.

B. Ground system components and conductor and cable shields to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other impairments.

C. Signal Ground Terminal: Locate at main equipment rack or cabinet. Isolate from power system and equipment grounding. Provide [5] <Insert value>-ohm ground. Measure, record, and report ground resistance.

D. Install grounding electrodes of type, size, location, and quantity indicated. Comply with installation requirements in Section 280500.01 "Common Results for Electronic Security."

3.5 FIELD QUALITY CONTROL

A. Pretesting: After installation, align, adjust, and balance system and perform complete pretesting to determine compliance of system with requirements in the Contract Documents. Correct deficiencies observed in pretesting. Replace malfunctioning or damaged items with new ones and retest until satisfactory performance and conditions are achieved. Prepare forms for systematic recording of acceptance test results.

1. Report of Pretesting: After pretesting is complete, provide a letter certifying that installation is complete and fully operable; include names and titles of witnesses to preliminary tests.

B. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Tests and Inspections: Comply with provisions in NFPA 731, Ch. 9, "Testing and Inspections."

1. Inspection: Verify that units and controls are properly labeled and interconnecting wires and terminals are identified.

2. Test Methods: Intrusion detection systems and other systems and equipment that are associated with detection and accessory equipment shall be tested according to Table "Test Methods" and Table "Test Methods of Initiating Devices."

D. Documentation: Comply with provisions in NFPA 731, Ch. 4, "Documentation."

E. Tag all equipment, stations, and other components for which tests have been satisfactorily completed.

3.6 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain the intrusion detection system. Comply with documentation provisions in NFPA 731, Ch. 4, "Documentation and User Training."

END OF SECTION

SECTION 28 23 00 – VIDEO SURVEILLANCE SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes a video surveillance system consisting of cameras, digital video recording systems, data transmission wiring, and a control station with its associated equipment. These systems will become a component of a larger video assessment system. Video Surveillance system will be required to record and retain video at full resolution and 15 frames per second for a period of 30 days.

B. Related Sections

1. Section 280500.01 “Common Work Results for Electronic Security”
2. Section 280513 "Conductors and Cables for Electronic Safety and Security" for cabling between master control units and field-mounted devices and control units.
3. Section 281600 “Intrusion Detection that provide sensor level intrusion for and throughout the facility and vehicle parking areas and utility areas

1.3 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Video surveillance system shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

B. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

1.4 ACTION SUBMITTALS

A. Contractor to provide system submittals per requirements in Specifications Section 013300.

B. Product Data: For each type of product indicated. Include dimensions and data on features, performance, electrical characteristics, ratings, and finishes.

C. Retain first paragraph below if custom equipment, such as operator panels and consoles, is specified in this Section. Coordinate with Drawings.

D. Shop Drawings: For video surveillance. Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Functional Block Diagram: Show single-line interconnections between components for signal transmission and control. Show cable types and sizes.
3. Dimensioned plan and elevations of equipment racks, control panels, and consoles. Show access and workspace requirements.
4. UPS: Sizing calculations.
5. Retain subparagraph below if equipment includes wiring.
6. Wiring Diagrams: For power, signal, and control wiring.

E. Equipment List: Include every piece of equipment by model number, manufacturer, serial number, location, and date of original installation. Add pretesting record of each piece of equipment, listing name of person testing, date of test, set points of adjustments, name and description of the view of preset positions, description of alarms, and description of unit output responses to an alarm.

1.5 INFORMATIONAL SUBMITTALS

A. Retain first paragraph below if required by seismic criteria applicable to Project. Coordinate with Sections specifying electrical supports and seismic controls. See ASCE/SEI 7 for certification requirements for equipment and components.

B. Seismic Qualification Certificates: For video surveillance, cameras, camera-supporting equipment, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

    a. Field quality-control reports.
    b. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For cameras, power supplies, infrared illuminators, monitors, videotape recorders, digital video recorders, video switches, and control-station components to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 01 70 00 "Execution and Closeout Requirements," include the following:

1. Lists of spare parts and replacement components recommended to be stored at the site for ready access.

1.7 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with NECA 1.

C. Comply with NFPA 70.

D. Retain paragraph below if integrating video surveillance system with access-control system.

E. Electronic data exchange between video surveillance system with an access-control system shall comply with SIA TVAC.

1.8 PROJECT CONDITIONS

A. Environmental Conditions: Capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

1. Retain subparagraphs below; revise conditions and specify features required to provide satisfactory service. See Editing Instruction No. 2 in the Evaluations for discussion of service conditions.
2. Control Station: Rated for continuous operation in ambient temperatures of 60 to 85 deg F (16 to 29 deg C) and a relative humidity of 20 to 80 percent, noncondensing.
3. Interior, Controlled Environment: System components, except central-station control unit, installed in air-conditioned interior environments shall be rated for continuous operation in ambient temperatures of 36 to 122 deg F (2 to 50 deg C) dry bulb and 20 to 90 percent relative humidity, noncondensing. Use NEMA 250, Type 1 enclosures.
4. Interior, Uncontrolled Environment: System components installed in non-air-conditioned interior environments shall be rated for continuous operation in ambient temperatures of [0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and 20 to 90 percent relative humidity, noncondensing. Use NEMA 250, Type 12 enclosures.
5. Exterior Environment: System components installed in locations exposed to weather shall be rated for continuous operation in ambient temperatures of minus 30 to plus 122 deg F (minus 34 to plus 50 deg C) dry bulb and 20 to 90 percent relative humidity, condensing. Rate for continuous operation when exposed to rain as specified in NEMA 250, winds up to 85 mph (137 km/h) and snow cover up to 24 inches (610 mm) thick]. Use NEMA 250, Type 4X enclosures.
6. Hazardous Environment: System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.
7. Corrosive Environment: System components subject to corrosive fumes, vapors, and wind-driven salt spray in coastal zones. Use NEMA 250, Type 4X enclosures.
8. Security Environment: Camera housing for use in high-risk areas where surveillance equipment may be subject to physical violence.

1.9 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of cameras, equipment related to camera operation, and control-station equipment that fail in materials or workmanship within specified warranty period.

1. Warranty Period: FIve years from date of acceptance.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. The following are acceptable manufacturers of electronic security system products as specified in this specification section. Any proposed product from a different manufacturer is subject to the review and approval.

1. Video Management System:

    a. Genetec
    b. Approved equal

2. Network Cameras

    a. Axis
    b. Approved equal

3. Video Monitors Client

    a. Refer to Section – Refer to Section 28 05 31.10

2.2 VMS GENERAL REQUIREMENTS

A. The VMS shall support updating its camera drivers independent from the VMS installation. New drivers shall be released multiple times a year to extend support for new devices and features.

B. The VMS shall be based on a true open architecture that shall allow the use of non-proprietary workstation and server hardware, non-proprietary network infrastructure, and non-proprietary storage.

C. The VMS shall offer a complete and scalable video surveillance solution that shall allow cameras to be added on a unit-by-unit basis.

D. The VMS shall interface with analog-to-digital video encoders and IP cameras and with digital-to-analog video decoders, hereafter referred to as digital video servers (DVS). The VMS shall support DVS from various manufacturers.

E. The VMS shall integrate DVS using the DVS native SDK or using the following industry standards to interface to the DVS:

1. ONVIF

F. All video streams supplied from analog cameras or IP cameras shall be digitally encoded in H.265, H.264, MPEG-4, MPEG-2, MJPEG, MxPEG, Wavelet, or JPEG2000 compression formats and recorded simultaneously in real time.

G. All audio streams supplied from IP video servers shall be digitally encoded in g711 (u-law), g721, g723, or AAC compression formats and recorded simultaneously in real time.

H. Each camera's bit rate, frame rate, and resolution shall be set independently from other cameras in the system and altering these settings shall not affect the recording and display settings of other cameras.

I. The VMS shall be able to use multiple CCTV keyboards to operate the entire set of cameras throughout the system, including brands of cameras from various manufacturers and including their PTZ functionalities (i.e. Pelco keyboard controls Panasonic dome or vice-versa).

J. The VMS shall be able to retrieve and set the current position of PTZ cameras using XYZ coordinates.

K. The VMS shall support PTZ camera protocols from multiple manufacturers, including analog and IP protocols.

L. The VMS shall arbitrate the user conflict on PTZ usage based on user levels per camera.

M. The VMS shall support the following list of CCTV keyboard:

1. American Dynamics 2078 ASCII, and American Dynamics 2088 ASCII
2. Bosch Autodome, Bosch Intuikey
3. DVTel
4. GE ImpactNet
5. Panasonic, Pelco ASCII, Pelco KBD-300, Pelco 9760, and Pelco P.
6. Radionics
7. Hanwha Techwin SSC-100, SPC-600, SPC-2010, SPC-6000, and SPC-7000.
8. Videoalarm
9. Sony RM-NS1000
10. Panasonic WV-CU161C
11. Panasonic WV-CU950 Ethernet keyboard

N. The VMS shall support the following list of joysticks:

1. Axis 295
2. Axis T8310, T8311, T8312, T8313 Video Surveillance Control Board
3. Any USB joystick detected as a Windows Game Controller

O. The VMS shall support password change for the following list of video units:

1. Avigilon H3 and H4 series.
2. Axis: All units with firmware 6.50 or later.
3. Bosch: All units with firmware 6.30 or later.
4. Hanwha: The following series are supported:

    a. All X-Series (all firmwares)
    b. All PNx-Series (firmwares 1.01 and later)
    c. All SPE-xx10 (all firmwares), excluding SPE-100, SPE-400, SPE-101
    d. All Q-Series (all firmwares), excluding QNO-6010R, QNO-6020R, QNO-6030R, QND-6010R, QND-6020R, QND-6030R, QNV-6010R, QNV-6020R, QNV-6030R, QNE-6080RV, QNE-7080RV
    e. All L-Series (all firmwares)
    f. All TNx Series (all firmwares) excluding TNU-6320

5. ONVIF : Profile S compatible.
6. Panasonic: All units and all firmwares.

P. The VMS shall allow for the configuration of a time zone for each camera connected to a DVS. For playback review, users shall have the ability to search for video based on the following options:

1. Local time of the camera
2. Local time of the SSM
3. Local time of user's workstation
4. GMT Time
5. Other time zone

Q. Audio and Video storage configuration for the SSM shall either be:

1. Internal or external IDE/SATA/SAS organized or not in a RAID configuration.
2. Internal or external SCSI/iSCSI/Fiber Channel organized or not in a RAID configuration.
3. Within the overall storage system, it shall be possible to include disks located on:

a. External PCs on a LAN or WAN
b. Network Attached Servers (NAS) on a LAN or WAN
c. Storage Area Networks (SAN)

R. The SSM shall not limit the actual storage capacity configured per server.

S. Manufacturer:

1. Genetec Security Center:

a. Omnicast Enterprise

2.3 CYBER SECURITY REQUIREMENTS

A. The USP shall be an IP enabled solution. All communication between the SSM and CSA shall be based on standard TCP/IP protocol and shall use TLS encryption with digital certificates to secure the communication channel.

B. The USP shall support user authentication with claims-based authentication using external providers. External providers shall include:

1. ADFS (Active Directory Federation Services)
2. Azure Active Directory (through OpenID Connect)
3. Ping Identity (through OpenID Connect)
4. KeyCloak (through OpenID Connect)
5. Other Open ID Connect / SAML2 authentication agents

C. The USP shall limit the IP ports in use and shall provide the Administrator with the ability to configure these ports.

D. The VMS shall support only secured media stream requests, unless explicitly configured otherwise. Secured media stream requests shall be secured with strong certificate based authentication leveraging RTSPS (RTSP over TLS). Client authentication for media stream requests is claims-based and may use a limited lifetime security token.

E. The VMS shall offer the ability to encrypt the media stream, including video, audio, and metadata with authenticated encryption. Media stream encryption shall be done at rest and in transit and be a certificate based AES 128-bits encryption. The VMS shall:

1. Allow encryption to be set on a per camera basis for all or some of the cameras.
2. Provide up to 20 different certificates for different groups of CSA or users who have been granted access to decrypted streams.
3. Not decrease the recording performance by more than 50% when encryption is enabled.
4. Use Secure RTP (SRTP) to encrypt the payload of a media stream in transit and allow multicast and unicast of the encrypted stream.
5. Use a random encryption key and change periodically.
6. Allow encrypted streams to be exported.

F. The VMS shall support end to end encrypted streams with cameras supporting Secure RTP (SRTP) both in unicast and multicast from the camera.

G. The USP shall support encryption for all communications with its databases.

H. The USP shall provide in its main user interface a visual list showing the state of all configuration items relating to the cyber security hardening of the features of the system.

I. The USP shall provide recommendations relating to the passwords used to access the hardware units in the system. The recommendation should display if the passwords used on the units are weak, average, strong, or very strong.

J. The USP shall provide the ability to manually or automatically change the video unit passwords with manufacturer's native API, standard Genetec Protocol or ONVIF. The VMS shall support password change for video units as follows:

1. In batch or per unit
2. On schedule
3. From an event
4. Based on manufacturer's policies
5. The USP shall allow backup of last 5 passwords.
6. The USP shall allow copying password to clipboard to be used in the device webpage if the user has the appropriate privileges.
7. The USP shall provide the ability to export the video unit passwords if the user has the appropriate privileges.

K. The USP shall provide recommendations relating to the firmware of the hardware units enrolled in the system. Recommendations should display if the firmware is up to date, out of date, or if it has known security vulnerabilities.

2.4 FAILOVER AND STANDBY REQUIREMENTS

A. The USP shall support native and off-the-shelf failover options.

B. Failover Directory:

1. The Standby Directory shall act as a replacement SSM on hot standby, ready to take over as the acting Directory in case the primary Directory fails. The failover shall occur in less than one minute. No action from the user shall be required.
2. The USP shall support up to five (5) Directories on standby, lined up to take over as the acting Directory in a cascading fashion.
3. The Standby Directory shall keep its configuration database synchronized with the primary Directory.
4. The Standby Directory shall support disaster recovery scenarios where a server can be located in another geographic area (or building) and only take over if all other Directories become offline.
5. The Standby Directory shall support synchronization of the configuration databases using a backup and restore mechanism. The synchronization period shall be configurable from 15 minutes to 1 week.
6. The Standby Directory shall support real-time synchronization of the configuration databases using SQL Mirroring or SQL Always On.

C. Standby Archiver. Refer to section 2.05 Standby Archiver for more information.

D. Off-the-shelf standby/failover options (excluding the VMS Archiver) shall include:

1. Windows Clustering
2. NEC ExpressCluster X LAN

2.5 ARCHIVING

A. The Archiver (role) shall use an event and timestamp database for the advanced search of audio/video archives. This database shall use Microsoft SQL.

B. The Archiver shall protect archived audio/video files and the system database against network access and non-administrative user access.

C. The Archiver shall digitally sign recorded video using an EdDSA signature algorithm based on a public/private key cryptography.

D. The Archiver shall offer a plug and play type hardware discovery service with the following functionalities:

1. Automatically discover DVS units as they are attached to the network.
2. Discover DVS units on different network segments, including the Internet, and across routers with or without network address translation (NAT) capabilities.

E. The Archiver shall have the capacity to configure the key frame interval (I-frame) in seconds or number of frames.

F. The Archiver shall provide a pre-alarm and post-alarm recording option that can be set between one second and 5 minutes on a per camera basis.

G. The Archiver shall provide the functionality of storing of video and audio streams based on triggering events, such as:

1. Digital motion detection
2. Digital input activation
3. Macros
4. Through SDK application recording

H. The Archiver shall perform video motion detection on each individual camera based on a grid of 1320 motion detection blocks. All of the video motion detection settings are configurable on schedule. A global sensitivity threshold is available to reduce motion detection sensitivity when the video signal is noisy or when a lot of false hits are incurred. Video motion detection itself can be set into four different modes:

1. Full Screen: All 1320 blocks on screen are activated, and a general threshold for the overall motion in the entire image can be set, and when it is reached, it can trigger recording and a motion event or a custom event.
2. Full Screen Unit: This is the same as the Full Screen but the motion detection takes place in the DVS.
3. Detection Zone: Six overlapping zones can be defined in the 1320 blocks on screen with each of these zones having its own threshold, and, when that threshold is reached, each one of them can trigger recording and a motion event or a custom event. Each zone triggering its own event allows for the configuration of directional motion detection events and other complex motion detection logic.
4. Detection Zone Unit: This is the same as the Detection Zone, but the motion detection takes place in the DVS and only one zone is supported.
5. Disabled: No motion detection is performed on this camera.

I. The Archiver shall be able to detect motion in video within 200 milliseconds and not only on key frames.

J. The Archiver shall allow for multiple recording schedules to be assigned to a single camera. Each schedule shall be created with the following parameters:

1. Recording mode:

    a. Continuous
    b. On Motion/Manual
    c. Manual
    d. Disabled

2. Recurrence pattern:

    a. Once on specific days
    b. Specific days on a yearly basis
    c. Specific days on a monthly basis
    d. Specific days on a weekly basis
    e. Daily
    f. Time coverage:
    g. All day.
    h. Specific time range(s).
    i. Daytime or nighttime based on the times of sunrise and sunset that are automatically calculated from the time of year and a geographical location. Provision shall be given to offset the calculated sunrise or sunset time by plus or minus 3 hours.

K. The Archiver shall allow each camera (video source) to be encoded multiple times in the same or different video formats (H.265, H.264, MPEG-4, MPEG-2, MJPEG, MxPEG, Wavelet, or JPEG2000), limited only by the capabilities of each DVS.

L. Whenever multiple video streams are available from the same camera, users shall be free to use any one of them based on their assigned usage. The standard video stream usages are:

1. Live
2. Recording
3. Remote
4. Low resolution
5. High resolution

M. The Archiver shall allow the video quality to vary according to predefined schedules. Such schedules shall have the same configuration flexibility as the recording schedules mentioned earlier. The video quality shall be based on, but not limited to, the following parameters:

1. Maximum bit rate
2. Maximum frame rate
3. Image quality
4. Key frame interval

N. The Archiver shall have the ability to dynamically boost the quality of the "recording stream" (see previous bullet) based on specific events:

1. When recording is started manually by a user.
2. When recording is triggered by a macro, an alarm or detected motion.

O. The Archiver shall have the capacity to communicate with the DVS using 128 bits SSL encryption.

P. The Archiver shall have the capacity to communicate with the DVS using HTTPS secure protocol.

Q. The Archiver shall have the capacity to receive multicast UDP streams directly from the DVS.

R. For network topologies that restrict the DVS from sending multicast UDP streams, the Archiver shall redirect audio/video streams to active viewing clients on the network using multicast UDP.

S. The Archiver shall have the capacity to redirect audio/video streams to active viewing clients on the network using unicast UDP or TCP.

T. The Archiver shall empower the administrator with a full range of disk management options:

1. The Archiver shall allow the administrator to choose which disks to use for archiving and to set a maximum quota for each.
2. The Archiver shall allow the administrator to spread the archiving of different cameras on different disk groups (groups of disks controlled by the same controller) so that archiving could be carried out in parallel on multiple disks.
3. The Archiver shall have the capacity to move video archives to the Azure Cloud. The archives will be moved after a preset number of days.

U. The Archiver shall empower the administrator with a full range of archive management options:

1. The Archiver shall provide a graphical representation of video sequences and recording gaps.
2. The Archiver shall provide a way to identify the location of the video sequences.

V. The Archiver shall offer the following options to clean up old archives, on a camera by camera basis:

1. After a preset number of days.
2. Deleting oldest archives first when disks run out of space.
3. Stop archiving when disks are full.

W. The Archiver shall allow important video sequences to be protected against normal disk cleanup routines.

X. Users shall have the following options when protecting a video sequence:

1. Until a specified date
2. For a specified number of days
3. Indefinitely (until the protection is explicitly removed)

Y. The Archiver shall allow the administrator to put a cap on the percentage of storage space occupied by protected video.

Z. The Archiver shall keep a log and compile statistics on disk space usage.

1. The statistics shall be available by disk group or for the whole Archiver.
2. The statistics shall show the percentage of protected video over the total used disk space.

AA. The Archiver shall have the capacity to down-sample video streams for storage saving purposes. The down-sampling options available are the following:

1. For H.264, MPEG-4, and H.265, streams the down-sampling options are: all key frames, 1 fps, 2 sec./frame, 5 sec./frame, 10 sec./frame, 15 sec./frame, 30 sec./frame, 60 sec./frame, 120 sec./frame.
2. For MJPEG streams the down-sampling options are: 15 fps, 10 fps, 5 fps, 2 fps, 1 fps, 2 sec./frame, 5 sec./frame, 10 sec./frame, 15 sec./frame, 30 sec./frame, 60 sec./frame, 120 sec./frame.

BB. The Archiver shall support DVS with edge recording capabilities and offer the following capacity:

1. The ability to playback the video recorded on the DVS at different speeds.
2. The ability to offload (video trickling) the video recorded on the DVS on schedule, on event, or manually to store it on the Archiver.
3. It shall be possible to filter the video that is being offloaded using one or multiple of the following filters:

    a. Time interval
    b. Playback request
    c. Video analytic events
    d. Motion events
    e. Bookmarks
    f. Alarms
    g. Input pin events

h. Unit offline events

CC. The Archiver shall be provided with proven performance and scalability figures:

1. The Archiver's performance shall be guaranteed during the rebuild of a disk from a raid 5 disk group. The rebuild process shall not affect the recording and playback capabilities.
2. The recommended server specification from the Genetec Security Center Hardware Requirement shall allow Archiver to perform up to 300 cameras or 300Mbs throughput first limit reached.
3. The high-performance archiver specification from the Genetec Security Center Hardware Requirement shall allow Archiver to perform:

a. Up to 500 cameras or 500Mbs throughput first limit reached with a 1Gbps NIC.

DD. The Archiver shall provide the ability to encrypt the media stream coming from the DVS including the video, audio and metadata:

1. Media encryption shall be optional and can be activated on a per DVS basis.
2. Media encryption shall be performed with AES 128-bits.
3. Media encryption shall encrypt all video, audio and metadata at rest and in transit. Once media encryption is turned on for a DVS all media stored or redirected by the Archiver shall be encrypted and shall require the private key to be decoded.
4. It shall be possible to export the encrypted media into a non-encrypted ASF file.

2.6 AUXILIARY ARCHIVER

A. The Auxiliary Archiver shall be used to produce redundant archives (video, events, or bookmarks) for any camera in the system, on a case by case basis.

B. The Auxiliary Archiver shall have the ability to record a camera on a different schedule than the Archiver.

C. The Auxiliary Archiver shall have the ability to archive any of the standard video streams for archiving. The standard video stream usages are: Live, Recording, Remote, Low Resolution, and High Resolution.

D. The Auxiliary archiver shall have the capacity to move video archives to the Azure Cloud.

2.7 STANDBY ARCHIVER

A. The Standby Archiver shall act as a replacement Archiver role on hot standby, ready to take over the functions of the primary Archiver role. The failover will occur in less than 1 minute. No action from the user will be required.

B. The Standby Archiver assigned to an Archiver role entity shall automatically provide protection for all DVS connected to that Archiver role.

C. The Standby Archiver shall protect the primary Archiver role against the following failures:

1. Server failure (hardware or software).

2. Storage failure, such as Archiver Role detects that it cannot read or write to any of its allocated disks.

D. It shall be possible for a single USP server to act as the standby server of multiple Archiver roles.

1. Each Archiver role shall have priority value if multiple Archiver Roles fail at the same time on the same standby server.

E. It shall be possible for any Archiver role in the system to be designated as another's standby and vice-versa.

F. For each Archiver role it shall be possible to set up to 2 standby Archiver so that if the first failover Archiver fails the failover will automatically occur to a third server.

G. The Standby Archiver shall have the ability to act as a Redundant Archiver.

H. It shall be possible to set a different retention period for the Archiver and the Redundant Archiver.

I. The Redundant Archiver shall maintain an exact copy of everything recorded by the default Archiver, i.e. audio/video archives, events, and bookmarks.

J. Redundancy shall be configured on a camera by camera basis.

K. The Redundant Archiver shall have to ability to use a multicast video stream from the DVS and shall not require an additional connection to any DVS.

2.8 CLOUD ARCHIVING

A. The VMS shall support the automatic transfer of video recorded on the Archiver to the cloud, based on the age of the video.

B. The Archiver shall encrypt recordings using AES-256 prior to transferring video to the cloud.

C. The Archiver shall rotate the encryption key at every file. The encryption key shall be encrypted with a certificate kept in Azure Key Vault.

D. The VMS shall support TLS encryption between the on-premises Archiver and the cloud.

E. The VMS shall allow users to search video stored in the cloud through the same functionality used when querying video that is stored locally.

F. The VMS will maintain a local cache of video downloaded from the cloud, to playback recordings without requiring an additional transfer.

G. The VMS shall support different tiers to support the video sequences.

1. The VSM shall allow users to differentiate the video sequences available for real-time and delayed retrieval.
2. The VMS shall automatically move video sequences from the real-time access to delayed retrieval after a configurable delay.

2.9 VMS MEDIA STREAMING

A. The Media Router Role shall be responsible for routing video and audio streams across local and wide area networks from the source (for example DVS) to the destination (for example CSA).

B. The Media Router Role shall support multiple transport protocols, such as unicast TCP, unicast UDP, and multicast UDP.

C. The Media Router shall support IGMP (Internet Group Management Protocol) to establish multicast group memberships:

1. IGMP v3, including SSM (Source-Specific Multicast) shall be supported.

D. The Media Router Role using Redirector Agents shall be responsible for redirecting a stream from a source IP endpoint to a destination IP endpoint.

E. The Redirector Agents shall be capable of converting a stream from and to any supported transport protocols:

1. Multicast UDP to Unicast TCP
2. Multicast UDP to Unicast UDP
3. Unicast TCP to Multicast UDP
4. Unicast UDP to Multicast UDP

F. It shall be possible to limit the number of concurrent live and playback video redirections for each Redirector Agent in order to better control the bandwidth across multiple sites.

G. It shall be possible to limit the bandwidth consumed by live and playback video from the CSA to better control the bandwidth across multiple sites. The SSM shall be able to prioritize video streaming to the CSA based on user level.

H. It shall be possible to protect the Media Router Role against hardware or software unavailability by configuring another Media Router Role to act as a hot standby server.

I. Multiple Redirector Agents shall be used on a large VMS installation to increase the service availability and to provide automatic load balancing.

2.10 VMS VIDEO ARCHIVES TRANSFER CAPABILITIES

A. Archive transfer shall provide the ability to:

1. Transfer video from a server to another server in the same system.
2. Transfer video from a federated server to another server.
3. Transfer video from camera storage to a server.

B. It shall be possible to program video transfers either on a recurrent schedule, or to trigger them manually or upon connection.

C. It shall be possible to filter the video of interest for a transfer. The video of interest shall be defined with the following filters:

1. All archives when the camera was offline.

2. Alarms.
3. Playback request from the edge.
4. Video analytics events.
5. Motion events.
6. Bookmarks.
7. Input triggers.
8. Time range.

D. It shall be possible to define the length of video before and after the event used as a filter to determine the video of interest.

E. The USP shall offer an interface for displaying all video archive transfer requests. This interface shall display all the current, requested and scheduled video transfer requests. It shall be possible to edit, trigger, and cancel video archive transfers from this interface.

F. The USP shall offer an interface for querying past video transfers and their outcome.

2.11 SECURITY VIDEO ANALYTICS

A. The analytics shall be completely unified with the Video Management System.

B. Configuration shall natively be performed in the configuration interface of the Video Management System.

C. The analytics shall feature dedicated configuration possibilities for the following scenarios:

1. Perimeter protection
2. Area protection
3. Direction control
4. Object detection
5. Stopped vehicle detection
6. Tailgating Detection

D. Each of the scenarios shall trigger events in the Video Management System, which correspond to their functionality.

E. Additional to these scenarios, the analytics shall allow to configure custom intrusion detection and object detection scenarios as well as allow to import settings to allow maximum flexibility.

F. The analytics license shall allow to configure any one of these scenarios per camera.

G. The analytics shall allow at least two different detection variants:

a. Trigger an alarm if a motion pattern moves from zone A (source) through zone B into zone C (sink).
b. Trigger an alarm if a motion pattern moves anywhere inside a specified zone.

H. The analytics shall support an unlimited number of detection areas.

I. The analytics feature rain-filters to filter out disturbances.

J. The analytics shall feature live configuration to immediately see the effects of parameter changes in the configuration interface without prior saving new configurations.

K. The configuration of the analytics shall be possible on recorded video streams.

L. The analytics shall offer the possibility to configure object movement paths.

M. The analytics shall not employ tripwires or cross-lines.

N. Areas and the scenes perspective (near & far object size) shall be configured on-screen using a point-and-click interface.

O. The analytics shall feature filters for movement speed, distance, and direction to detect events.

P. The analytics shall feature options to separately show or hide areas, area names, and detection overlays.

Q. The analytics shall be fully server-based, with no calculation on cameras necessary.

R. The analytics shall operate with color, thermal, and infrared cameras.

S. The accuracy of the analytics shall be evaluated and approved by the CPNI Video Analytics Assessment Programme and shall be listed in the CPNI Catalogue of Security Equipment (CSE).

2.12 CAMERA INTEGRITY MONITOR

A. Description:

1. Automatically checks camera feeds to detect if cameras have been tampered with.
2. Can be used for near-real-time alerting of tampering events or as a maintenance tool.
3. Reports can be run on detected tampering events.

B. Details:

1. It shall be completely unified with the Video Management System.
2. It shall be possible to set the detection sensitivity per camera stream between low, medium, and high.
3. It shall be possible to choose on which servers the analytics shall run.
4. The camera stream used for analytics shall be configurable.
5. It shall be possible to define how many cameras are being analyzed at the same time.
6. To utilize minimum hardware resources, it shall be definable how often camera streams are analyzed.
7. There shall be an overview over which cameras are configured to be analyzed.

2.13 PRIVACY PROTECTOR

A. Description:

1. Automatically obscures all movement in surveillance videos in real-time.

2. Live privacy masking of moving objects (such as people and vehicles).
3. Completely unified with the video management system.
4. Native configuration in the configuration interface of the video management system.

B. Details:

1. Certified with a valid EuroPriSe certification seal.
2. Privacy masking can be removed either per camera or for all cameras currently viewed. Masking for all cameras viewed can be removed and added either manually with a button or automatically with an action.
3. Indoor / outdoor modes using flexible background modeling:

    a. Indoor: Learning model with up to 10 different illumination states – this allows to adapt to fast lighting changes such as lights switching on and off.
    b. Outdoor: Foreground detection based on edge detection rather than color – this allows to adapt to heavily changing lighting conditions such as clouds temporarily blocking sunlight.

4. Detects movements using an absolute difference image, calculated by subtracting the current frame from a calculated background model.
5. Masks movements using blocks, thus obscuring the outline of an object or person.
6. Three different scrambling methods: Pixelation, Colorize, and Transparency.
7. Masking grids can be configured in a point-and-click interface.
8. Past preview mode to see configuration changes in the configuration interface without necessity to save the configuration.
9. Zones can be freely definable polygons with a point-and-click interface.
10. Option to set analysis resolution to optimize performance.
11. No calculation on the camera necessary, completely server-based.
12. Option to define zones, which should always or never be pixelated.
13. Option to choose input stream and output stream parameters, including resolutions, frame rate, and encoding.
14. Utilizes server-side hardware acceleration to maximize the amount of cameras analyzed per server.

2.14 PEOPLE COUNTER

A. Description:

1. Automatically counts people in a camera's field of view.
2. Provides live dashboard widgets dedicated for people counting.
3. Completely unified in the video management system.
4. Native configuration in the configuration interface of the video management system.

B. Details:

1. Based on deep-learning models trained on person detection to exclude non-human objects.
2. Dedicated dashboard widgets for people counting with the following features:

a. Charts: visualization of counts in line- or bar-charts
b. Throughput: Show number of persons in given time-frame.
c. Occupancy: Show how many people are in an area (IN minus OUT)

3. Counts adults and children.
4. Counts persons in wheel-chairs.
5. Supports top-down camera views.
6. Supports bi-directional counting.
7. Supports tilted camera views.
8. Option to show/hide overlays with detected persons and counting line.
9. No GPU required to run.
10. The occupancy widget support resetting the count at a defined time option to define zones, which should always or never be pixelated.
11. Supports organizing cameras into areas and show these areas in widgets.
12. Utilizes server-side hardware acceleration to maximize the amount of cameras analyzed per server.
13. Counts can be integrated to external systems using CSV exports and a .NET SDK

2.15 GENERAL CLIENT SOFTWARE REQUIREMENTS

A. The Client Software Applications (CSA) shall provide the user interface for USP configuration and monitoring over any network and be accessible locally or from a remote connection.

B. The CSA shall consist of the Configuration UI for system configuration and the Monitoring UI for monitoring. The CSA shall be Windows-based and provide an easy-to-use graphical user interface (UI).

C. The CSA for monitoring shall support running in 64-bit mode.

D. The Server Administrator shall be used to configure the server database(s). It shall be web-based and accessible locally on the SSM or across the network.

E. The CSA shall seamlessly merge access control, license plate recognition (ALPR), and video functionalities within the same user application.

F. The USP shall use the latest user interface (UI) development and programming technologies such as Microsoft WPF (Windows Presentation Foundation), the XAML markup language, and the .NET software framework.

G. All applications shall provide an authentication mechanism, which verifies the validity of the user. As such, the administrator (who has all rights and privileges) can define specific access rights and privileges for each user in the system.

H. Logging on to a CSA shall be done either through locally stored USP user accounts and passwords or using the operator's Windows credentials when Active Directory integration is enabled.

I. When integrated with Microsoft's Active Directory, the CSA and USP shall authenticate users using their Windows credentials. As a result, the USP will benefit from Active Directory password authentication and strong security features.

J. When integrated with an external identity provider such as Windows Active Directory, ADFS (Active Directory Federation Services) or an Open ID Connect/SAML2 identity provider (ex.: Azure AD), the CSA and USP shall authenticate using a Single-Sign On experience to the users. As a result, the USP will benefit from reusing the same credential throughout enterprise applications.

K. The CSA shall support multiple languages, including but not limited to the following: English, French, Arabic, Czech, Dutch, German, Hebrew, Hungarian, Italian, Japanese, Korean, Norwegian, Persian (Farsi), Polish, Portuguese (Brazilian), Simplified and Traditional Chinese, Russian, Spanish, Swedish, Thai, Turkish, and Vietnamese.

L. To enhance usability and operator efficiency, the Configuration UI and Monitoring UI shall support many of the latest UI such as:

1. A customizable Home Page that includes favorite and recently used tasks.
2. Task-oriented approach for administrator/operator activities where each type of activity (surveillance, visitor management, individual reports, and more) is an operator task.
3. Consolidated and consistent workflows for video, ALPR, and access control.
4. Single click functionality for reporting and tracking. The Monitoring UI shall support both single-click reporting for access control, ALPR, and video, as well as single-click tracking of areas, cameras, doors, zones, cardholders, elevators, ALPR entities, and more. Single-click reporting or tracking shall create a new task with the selected entities to report on or track.

M. Configuration UI and Monitoring UI Home Page and Tasks

1. The Configuration UI and Monitoring UI shall be task-oriented.
2. A task shall be user interface design patterns whose goal is to simplify the user interface by grouping related features from different systems, such as video and access, in the same display window. Features shall be grouped together in a task based on their shared ability to help the user perform a specific task.
3. Tasks shall be accessible via the Home Page of either the Configuration or the Surveillance CSA.
4. Newly created tasks shall be accessible via the Configuration UI or the Monitoring UI taskbar.
5. Similar tasks shall be grouped into the following categories:

    a. Operation: Access control management, LRP management, and more.
    b. Investigation: Video bookmark/motion/archive reports, access control activity reports, visitor activity reports, alarm reports, ALPR activity reports, and more.
    c. Maintenance: Access control and video configuration reports, troubleshooters, audit trails, health-related reports, and more.

6. An operator shall be able to launch a specific task only if they have the appropriate privileges.
7. The Home Page content shall be customizable through the use of privileges to hide tasks that an operator should not have access to and through a list of favorite and recently used tasks. In addition, editing a USP XML file to add new tasks on the fly shall also be possible.

N. The Contractor shall provide up to (see plans) number of simultaneous Clients.

2.16 CONFIGURATION USER INTERFACE (UI)

A. General:

1. The Configuration UI application shall allow the administrator or users with appropriate privileges to change the system configuration. The Configuration UI shall provide decentralized configuration and administration of the USP system from anywhere on the IP network.
2. The configuration of all embedded ACS, VMS, and ALPR systems shall be accessible via the Configuration UI.
3. The Configuration UI shall have a home page with single-click access to various tasks.
4. The Configuration UI shall include a variety of tools such as troubleshooting utilities, import tools, and a unit discover tool, amongst many more.
5. The Configuration UI shall include a static reporting interface to:

    a. View historical events based on entity activity. The user shall be able to perform such actions as printing a report and troubleshooting a specific access event from the reporting view.
    b. View audit trails that show a history of user/administrator changes to an entity.

6. Common entities such as users, schedules, alarms and many more, can be reused by all embedded systems (ACS, VMS, and ALPR).

B. Video management system:

1. The Configuration UI shall allow the administrator or users with appropriate privileges to change video configuration.
2. The Configuration UI shall provide the ability to change video quality, bandwidth, and frame rate parameters on a per camera (stream) basis for both live and recorded video.
3. The Configuration UI shall provide the ability to change video quality by a selection of predefined video quality template.
4. The Configuration UI shall provide the ability to configure brightness, contrast, and hue settings for each camera on the same DVS.
5. The Configuration UI shall provide the capability to enable audio recording on DVS units that support audio.
6. The Configuration UI shall provide the ability to change the audio parameters, serial port and I/O configuration of individual DVS units.
7. The Configuration UI shall provide the capability to rename all DVS units based on system topology and to add descriptive information to each DVS.
8. The Configuration UI shall provide the ability to set recording schedules and modes for each individual camera. The recording mode can be:

    a. Continuous
    b. On motion and Manual
    c. Manual only
    d. Disabled

9. The Configuration UI shall support the creation of schedules to which any of the following functional aspects can be attached:

    a. Video quality (for each video stream per camera)

b. Recording (for each camera)
c. Motion detection (for each detection zone per camera)
d. Brightness, Contrast, and Hue (for each camera)
e. Camera sequence execution

10. The Configuration UI shall support the creation of unlimited recording schedules and the assigning of any camera to any schedule.
11. The Configuration UI shall detect and warn user of any conflict within assigned schedules.
12. The Configuration UI shall provide the capability to set a PTZ protocol to a specific DVS serial port and shall allow mixing domes of various manufacturers within a system.
13. User shall have the ability to configure a return to home function after a predefined time of inactivity for PTZ cameras. This period of inactivity time shall be configurable from 1 to 7200 seconds.

2.17 VMS CLIENT USER INTERFACE (UI)

A. The Monitoring UI shall fulfill the role of a Unified Security Interface that is able to monitor video, ALPR, and access control events and alarms, as well as view live and recorded video.

B. The Monitoring UI shall provide a graphical user interface to control and monitor the USP over any IP network. It shall allow administrators and operators with appropriate privileges to monitor their unified security platform, run reports, and manage alarms.

C. To enhance usability and operator efficiency, the Monitoring UI shall support the following UI concepts:

1. Dynamically adaptive interface that adjusts in real-time to what the operator is doing.
2. A dynamic controls section loaded with entity-specific widgets (e.g. door and camera widgets).
3. Use of transparent overlays that can display multiple types of data in a seamless fashion.
4. Display tile menus and quick commands.
5. Consolidated and consistent workflows.
6. Tile menus and quick commands easily accessible within every display tile of the user workspace.
7. Single click functionality for reporting and tracking. The Monitoring UI shall support both single-click reporting for access control, ALPR, and video, as well as single-click tracking of areas, cameras, doors, zones, cardholders, elevators, ALPR entities, and more. Single-click reporting or tracking shall create a new task with the selected entities to report on or to track.

D. Monitoring UI Home Page and Tasks:

1. Similar tasks shall be grouped into the following categories:

a. Operation: Access control/LRP/video surveillance, visitor management, mustering, access control and video alarm monitoring, and more.
b. Investigation: Video bookmark/motion/archive reports, access control activity reports, visitor activity reports, alarm reports, ALPR activity reports, and more.
c. Maintenance: Access control and video configuration reports, troubleshooters, audit trails, and more.

E. Dynamically Adaptive UI, Controls section, and Widgets:

1. The Monitoring UI shall dynamically adapt to what the operator is doing. This shall be accomplished through the concept of widgets that are grouped in the Monitoring UI Controls section.
2. Widgets shall be mini-applications or mini-groupings in the Monitoring UI Controls section that let the operator perform common tasks and provide them with fast access to information and actions.
3. With a single click on an entity (for example door or camera) the specific widgets associated to that entity appear and other non-relevant widgets disappear dynamically (instantly). Widgets shall bring the operator information such as door status and camera stream information, as well as user actions, such as door unlock, PTZ controls, and more.
4. Specific widgets include those for a door, camera, alarm, zone, display tile, video stream (statistics), PTZ camera, and more.

F. Operator Workflows:

1. A workflow shall be a sequence of operations an operator or administrator shall execute to complete an activity. The “flow” relates to a clearly defined timeline or sequence for executing the activity.
2. The Monitoring UI shall be equipped with consistent workflows for the ALPR, video, and access control systems that it unifies.
3. Generating or printing a report, setting up or acknowledging an alarm, or creating an incident report shall follow the same process (workflow) whether the operator is working with video, ALPR, or access control, or with both video and access control.

G. Each task within the Monitoring UI shall consist of one or more of the following items:

1. Event list.
2. Logical tree: Doors, cameras, zones, ALPR units, and elevators shall be grouped under Areas in a hierarchical fashion.
3. Entities list of all entities being tracked.
4. Display tiles with various patterns (1 x 1, 2 x 2, and more).
5. Display tile menu with various commands related to cameras, doors, PTZ, and tile controls.
6. Controls section with widgets.

H. The Monitoring UI shall support multiple event lists and display tile patterns, including:

1. Event/alarm list layout only
2. Display tile layout only
3. Display tile and alarm/event list combination
4. ALPR map and alarm/event list combination

I. User workspace customization

1. The user shall have full control over the user workspace through a variety of user-selectable customization options. Administrators shall also be able to limit what users and operators can modify in their workspace through privileges.
2. Once customized, the user shall be able to save his or her workspace.
3. The user workspace shall be accessible by a specific user from any client application on the network.

4. Display tile patterns shall be customizable.
5. Event or alarm lists shall span anywhere from a portion of the screen up to the entire screen and shall be resizable by the user. The length of event or alarm lists shall be user-defined. Scroll bars shall enable the user to navigate through lengthy lists of events and alarms.
6. The Monitoring UI shall support multiple display tile patterns (for example one display tile (1x1 matrix), 16 tiles (8x8 matrix), and multiple additional variations).
7. The Monitoring UI shall support as many monitors as the PC video adapters and Windows Operating System are capable of accepting.
8. Additional customization options include show/hide window panes, show/hide menus/toolbars, show/hide overlaid information on video, resize different window panes, and choice of tile display pattern on a per task basis.

J. The Monitoring UI shall provide an interface to support the following tasks and activities common to access control, ALPR, and video:

1. Monitoring the events from a live security system (ACS and/or VMS and/or ALPR).
2. Generating reports, including custom reports.
3. Monitoring and acknowledging alarms.
4. Creating and editing incidents and generating incident reports.
5. Displaying dynamic graphical maps and floor plans as well as executing actions from dynamic graphical maps and floor plans.
6. Management and execution of hot actions and macros.

K. The Monitoring UI shall be able to monitor the activity of the following entities in real-time: areas, ALPR entities, doors, elevators, cameras, cardholders, cardholder groups, zones (input points), and more.

L. The Monitoring UI shall include advanced video capabilities, including:

1. Advanced live video viewing functionality.
2. Advanced archive playing and video playback functionality.
3. Monitoring and management of video system events and alarms.
4. Intercom or duplex audio.
5. Generation of video reports.
6. Control of PTZ cameras.
7. Creating and monitoring archive transfer requests.
8. Display metadata overlaid on live or playback video.

M. The Monitoring UI shall leverage the Graphical Processing Unit (GPU) for video decoding.

1. The following GPU technologies shall be supported:

   a. NVidia CUDA
   b. Intel Quick Sync

2. The Monitoring UI shall have the ability to decode video through the optimal simultaneous use of the GPU and Computer Processing Units (CPU).

N. The live video viewing capabilities of the Monitoring UI shall include:

1. The ability to display all cameras attached to the USP and all cameras attached to federated systems.
2. Support for live video monitoring on each and every display tile within a task in the user's workspace.
3. The USP shall support uninterrupted video streaming. The CSA shall keep existing video connections active in the event that an SSM (except Archiver) becomes unavailable.
4. The ability to drag and drop a camera into a display tile for live viewing.
5. The ability to drag and drop a camera into a display tile for live viewing on an analog monitor connected to an IP hardware decoder (converting an IP encoded stream into an analog video signal).
6. The ability to drag and drop a camera from a map into a display tile for live viewing.
7. Support for digital zoom on live camera video streams.
8. The ability for audio communication with video units with audio input and output.
9. The ability to control pan-tilt-zoom, iris, focus, and presets.
10. The ability to bookmark important events for later retrieval on any archiving camera and to uniquely name each bookmark in order to facilitate future searches.
11. The ability to start/stop recording on any camera in the system that is configured to allow manual recording by clicking on a single button.
12. The ability to activate or de-activate viewing of all system events as they occur.
13. The ability to switch to instant replay of the video for any archiving camera with the simple click of button.
14. The ability to take snapshots of live video and be able to save or print the snapshots.
15. The ability to view the same camera multiple times in different tiles.

O. The video playback (archive playing) capabilities of the Monitoring UI shall include:

1. Support for audio and video playback for any time span.
2. Support for video playback on each and every display tile.
3. The ability to instantly replay the video for any archiving camera with the simple click of a button.
4. The ability to select between instant synch of all video streams in playback mode, allowing operators to view events from multiple angles or across several camera fields, or non-synchronous playback.
5. The ability to simultaneously view the same camera in multiple tiles at different time intervals.
6. The ability to control playback with:

    a. Pause
    b. Lock Speed
    c. Forward and Reverse Playback at: 1x, 2x, 4x, 6x, 8x, 10x, 20x, 40x, 100x
    d. Forward and Reverse Playback frame by frame
    e. Slow Forward and Reverse Playback at: 1/8x, 1/4x, 1/3x, 1/2x
    f. Loop playback between two time markers

7. The ability to display a single timeline or one timeline for each selected video stream, which would allow the operator to navigate through the video sequence by simply clicking on any point in the timeline.
8. The ability to display the level of motion at any point on a timeline.
9. The ability to clearly display bookmarked events on the timeline(s).

10. The ability to query archived video using various search criteria, including, but not limited to, time, date, camera, and area.
11. The tool necessary for searching video and associated audio based on user-defined events or motion parameters.
12. The ability to define an area of the video field in which to search for motion as well as define the amount of motion that will trigger search results. The Monitoring UI shall then retrieve all archived video streams that contain motion that meets the search parameters. There shall be a graphical timeline on which the time of each search hit shall be indicated.
13. The ability to browse through a list of all bookmarks created on the system and select any bookmarked event for viewing.
14. The ability to add bookmarks to previously archived video for easier searching and retrieval.
15. Support for digital zoom on playback video streams.
16. Still image export to PNG, JPEG, GIF, and BMP format with Date and Time stamp, and Camera Name on the image (snapshot).
17. Tools for exporting video and a self-contained video player on various media such as USB keys or CD/DVD-ROM. This video player shall be easy to use without training and shall still support reviewing video metadata, such as bookmark, or navigating the video with functions like panoramic camera view dewarping.
18. Tools for exporting video sequences in standard video formats, such as ASF or MP4.
19. The ability to encrypt exported video files.
20. The ability for an operator to load previously exported video files from their computer or network.
21. The ability for queries to be saved upon closing the CSA and reappear when the application is reopened.
22. The ability to dynamically block, on demand, video stream dynamically to lower level users to prevent access, for a specific time, to live and recorded video.
23. A tool building and exporting a set of videos into a single container. This tool shall allow the operator to build sequences of video to create a storyboard and allow the export of synchronous cameras.
24. The ability to store the video export and still image export at a pre-defined storage location.
25. An interface with the ability to list, search, and manipulate previously generated video exports.
26. The ability to export sequences of video in open standards including ASF and MP4.

P. The Monitoring UI shall provide an interface to support the following ALPR tasks and capabilities:

1. Monitoring and management of ALPR events and alarms.
2. Viewing of license plate picture(s) and context images.
3. Viewing of license plate data (e.g. license plate reads)
4. Verification of ALPR data against live and recorded video.

Q. Entity Monitoring:

1. The USP shall permit the user to select multiple entities to monitor from the Monitoring UI by adding the entities one by one to the tracking list.
2. The Monitoring UI shall provide the option to filter which events shall be displayed in the display tile layout and/or event list layout.
3. It shall be possible to lock a Monitoring UI display tile so that it only tracks the activity of a specific entity (e.g. specific door or camera).

4. The user shall be able to drag and drop an event from an event list (or an alarm from an alarm list) onto a display tile to view a license plate read, cardholder picture ID, badge ID, or live/archived video, among other options.
5. Event, alarm, monitoring/tracking, and report lists shall contain cardholder pictures where applicable.
6. The user shall be permitted to start or pause the viewing of events within each display tile.

R. Display Tile Packing and Unpacking:

1. The Monitoring UI shall support single-click unpacking and packing for ALPR hits, ALPR reads, areas, doors, zones, camera sequences, and alarms.
2. The packing and unpacking of entities shall allow operators to quickly obtain additional information and camera views of a specific entity.
3. The unpacking of an entity shall display associated entities. For example, unpacking a door with multiple associated cameras shall display all cameras associated with that door. Unpacking shall reconfigure the display tiles to be able to display all associated entities. For example, unpacking a door (or a zone or alarm) that is currently in a 1 x 1 tile configuration and that has 3 cameras tied to it will create a 1 x 3 display tile arrangement for viewing all associated entities.
4. Packing will return the display to the original tile pattern.

S. Visual Tracking:

1. The Monitoring UI shall support the ability to manually track a moving target with the single click of a button.
2. The ability to switch from one camera view to an adjacent camera shall be done within a single display tile.
3. Switching between camera streams shall be accomplished by simply clicking on a semi-transparent shape or overlay.
4. Visual tracking shall be available with both live and recorded video.

2.18 SERVER ADMINISTRATOR USER INTERFACE REQUIREMENTS

A. The Server Administrator shall be used to configure the SSM and the Directory Role (main configuration) and its database(s), to apply the license, and more.
B. The Server Administrator shall be a web-based application. Through the Server Administrator, it shall be possible to access the SSM across the network or locally on the server.
C. Access to the Server Administrator shall be protected via login name, password, and encrypted communications.
D. The Server Administrator shall allow the administrator (user) to perform the following functions:

1. Manage the system license.
2. Configure the database(s) and database server for the Directory Role,
3. Activate/Deactivate the Directory Role.
4. Manually back up the Directory Role database(s) and/or restore the server database(s), as well as configure scheduled backups of the databases.
5. Define the client-to-server communications security settings.
6. Configure the network communications hardware, including connection addresses and ports.
7. Configure system SMTP settings (mail server and port).

8. Configure event and alarm history storage options.

2.19 UNIFIED WEB CLIENT (UWC) GENERAL REQUIREMENTS

A. The USP shall support a unified web client (UWC) for access control and video.
B. The UWC shall be a truly thin client with no download required other than an internet web browser or standard web browser plugins.
C. The UWC shall be platform independent and run within Microsoft Edge, Internet Explorer, Firefox, Safari, and Google Chrome.
D. Web pages for the web client shall be managed and pushed by the Web Server Role. Microsoft IIS or any other web hosting service shall not be required given that all the web pages shall be hosted by the Web Server Role.
E. The UWC shall support display on tablet format.
F. The UWC shall support native H.264 video in the web client.
G. Web pages for the web client shall be managed and pushed by the Web Client Server. Microsoft IIS or any other web hosting service shall not be required given that all the web pages shall be hosted by the Mobile Server.
H. The Contractor shall provide up to (SEE PLANS) number of simultaneous Web Clients.
I. The Web Client Server shall provide the ability to define a unique URL to access the web client, to ensure the security of the application.
J. The UWC shall provide the ability to load a camera layout.
K. The UWC shall provide the ability to configure, save, and reload private camera layouts.
L. The UWC shall provide the ability to control PTZ cameras.
M. Functionalities:

1. Log in support shall be available using:
    a. username and password
    b. Active Directory.
    c. Azure Active Directory, ADFS, OpenID Connect or SAML2 identity provider.
    d. Ability for user to change their password.

2. Encrypted communications for all transactions.
3. Print reports and export to CSV file.
4. Customer logo customization shall be available for multi-tenant and hosted services applications.
5. Video:

    a. Live and playback video at 320 x 240, 640 x 480 or 1280 x 1024 @ 15 fps
    b. Video export
    c. 1, 4, 6 or 9 tiles
    d. Basic PTZ Controls (Pan/Tilt, Zoom, go to presets, start pattern)
    e. Start / Stop recording
    f. Sample web page for customers to see how to view video for their own development
    g. Add bookmarks
6. Alarms:

    a. Alarm report

7. Threat Level.

2.20 SMARTPHONE AND TABLET APP GENERAL REQUIREMENTS

A. The USP shall support mobile apps for various off-the-shelf devices. The mobile apps shall communicate with the Mobile Server of the USP over any Wi-Fi or cellular network connection.

B. Mobile apps shall communicate with the USP via a Mobile Server Role (MSR). All communication between the mobile apps and MSR shall be based on standard TCP/IP protocol and shall use the TLS encryption with digital certificates to secure the communication channel.

C. Supported device manufacturers shall include (refer to Mobile App specifications for latest compatibility list):

1. Apple devices running iOS 11.0 or later
2. Android devices 6.0 or later

D. It shall be possible to download the mobile apps from the Central application store (Apple iTunes App Store, Google Play).

E. It shall be possible to push configuration to the mobile devices through a Mobile Device Management solution such as VMWare Workspace One or Microsoft Intune.

F. Functionalities:

3. Core
   a. Ability to logon/logoff to the USP using an authorized user profile of the system.
   b. Ability to support passive authentication from a single sign-on provider (OpenID Connect or SAML2 identity provider).
   c. Ability to use biometric features (thumbprint, face ID, etc.) to perform connection to the system.
   d. Ability to change the picture or the password of the user of the mobile app.
   e. Ability to view the current Threat Level of the system.
   f. Ability to change the current Threat Level of the system.
   g. Ability to execute hot actions configured in the user profile.
   h. Ability to view entities from the USP:

      i. Cameras
      ii. Doors
      iii. ALPR cameras
      iv. Web Tile Plugins
      v. Layouts
      vi. Camera Sequences
      vii. Macros
      viii. Maps (geographical maps only)

   i. Ability to navigate the system hierarchical view of the entities and search entities in the system.

4. Video

   a. Ability to view live and recorded video from the cameras of the USP. A maximum of four cameras shall be displayed.

b. Ability to view video in native format (H.264).
c. Ability to display live and recorded video side-by-side for a specific camera.
d. Ability to perform digital zoom on cameras.
e. Ability to perform actions on cameras such as add a bookmark, control a PTZ, control the iris/focus function, save a snapshot, start/stop recording.
f. Ability to view camera layouts.
g. Ability to view camera sequences.
h. Ability to run a camera events report.
i. Ability to change the video quality on the cameras displayed on the mobile app.
j. Ability to use the camera of the smartphone and stream a live video feed to a video recorder in the system.

5. Access Control

a. Ability to view the door state ad door lock state.
b. Ability to perform actions on a door such as unlock the door, set the door in maintenance mode, override the door unlocking schedule.

6. Automatic License Plate Recognition

a. Ability to view live events raised by an ALPR camera.
b. Ability to view the read image, context image, and all metadata captured by the ALPR camera.
c. Ability to run an ALPR event report.
d. Ability to add a license plate to a hotlist on the system.

7. Alarm Management

a. Ability to receive push notifications to notify mobile operators that an alarm was received.
b. Ability to view all active alarms assigned to the mobile operator.
c. Ability to perform action on an alarm such as acknowledge, forward, or alternate-acknowledge an active alarm.
d. Ability to view entities attached to the alarm.

8. Map

a. Ability to display a geographic map with USP entities geo-located on the map.
b. Ability to view any entity configured on the map.
c. Ability to search entities or location on the map.

B. It shall be possible to send a message from the client user interface to a mobile operator.
C. It shall be possible to send a live or playback video sequence from the client UI to a mobile operator.
D. It shall be possible to view mobile operators who enabled location tracking on a map in the system. The location of the mobile operator should be updated in real time.

2.21 HEALTH MONITOR

A. The USP shall monitor the health of the system, log health-related events, and calculate statistics.

B. USP services, roles, agents, units, and client apps will trigger health events.

C. The USP shall populate the Windows Event Log with health events related to USP roles, services, and client apps.

D. A dedicated role, the Health Monitoring Role, shall perform the following actions:

1. Monitor the health of the entire system and log events.
2. Calculate statistics within a specified time frame (hours, days, months).
3. Calculates availability for clients, servers and video/access/ALPR units.

E. A Health Monitoring task and Health History reporting task shall be available for live and historical reporting.

F. A Health Monitoring dashboard task shall be available in the client application user interface to provide a live display, such as pie charts and event lists, for quick visual assessment on the general health of the system.

G. A web-based, centralized health dashboard shall be available to remotely view unit and role health events of the USP.

H. Detailed system care statistics will be available through a web-based dashboard providing health metrics of USP entities and roles, including Uptime and mean-time-between-failures.

I. All health events raised in the system can be used for automating the USP event/action management.

J. Health events shall be accessible via the SDK (can be used to create SNMP traps).

Session Initiation Protocol (SIP) Communication Management (CM)

A. An operator of the USP shall be able to, within the USP Monitoring UI, initiate calls to and answer calls from other operator and edge voice devices such as intercoms, emergency call stations, information desks, softphones, or phone devices.

B. The USP shall support CM between the USP client User Interface and SIP endpoint devices.

C. SIP endpoints shall be able to register to the USP using a standard SIP protocol.

D. The USP shall support CM between two SIP endpoint devices.

E. The USP shall allow the configuration of SIP trunk connections to multiple SIP Servers supporting SIP Trunks.

F. The CM shall support the management of calls to and from other SIP Servers connected though SIP Trunks.

G. The USP shall support the configuration of paging zones for pre-recorded and live message announcements.

H. The CM is a service of the USP and shall not require the addition of any third party software.

I. The CM shall support the following video codecs:

1. H.264
2. H.263
3. H.263+ (1998)

J. The CM shall support the following audio codecs:

1. PCMA (G.711 aLaw)
2. PCMU (G.711 uLaw)
3. G.722
4. G.729
5. iLBC
6. GSM
7. telephone event
8. Speex (Narrowband)
9. Speex (Wideband)
10. Speex (Ultrawideband)
11. L.16
12. L.16-44-1
13. G.728
14. G.726-16
15. G.726-24
16. G.726-32
17. G.723
18. G.726-40

K. The CM shall certify SIP devices from the following manufacturers:

1. 2N Telekomunikace
2. Algo
3. Axis
4. Baudisch
5. Castel
6. Cisco
7. Code Blue
8. Commend
9. EMCOM
10. Grandstream networks
11. Jacques
12. Mobotix
13. Siedle
14. TalkaPhone
15. TOA Corporation
16. Valcom
17. Vingtor-Stentofon
18. Zenitel

19. Intelbras

L. The CM shall allow bidirectional audio and video recording of call sessions. The USP shall offer the following recording capabilities:

1. Automatic cleanup of call session files after a programmable number of days.
2. Deactivation of call recording between operators.
3. Deactivation of call recording with specific operators.
4. Deactivation of call recording with specific voice devices.
5. Selection of the storage path for call session recordings.

M. The CM shall provide the capability to reach a physical location identified by its own extension number regardless of the user connected to the USP.

N. The CM shall provide the flexibility for the administrator to define the network ports used to communicate between the USP servers and the following:

1. USP Operator Client User Interfaces
2. SIP devices
3. SIP servers

O. The CM shall provide the capability to create Ring Groups. A Ring Group is a group of call numbers grouped under a single call number. It shall be possible to set a Ring Group to simultaneously or sequentially call the members of the group. Dwell time for sequence mode shall be configurable.

P. The CM shall allow the automatic routing of calls through the configuration of a collection of rules (Dial Plan). Dial Plans shall support the following capabilities:

1. Match a phone number with regular expression.
2. Route calls based on matching the phone numbers from which calls are made.
3. Route calls based on matching the destination phone numbers to which calls are made.
4. Change the phone extension from which calls are received.
5. Change the phone extensions to which calls are sent.
6. A combination of any of the above capabilities in a configured priority and based on a schedule.

Q. Dial Plans shall be applicable to calls between SIP entities registered to the USP as well as to and from external SIP servers.

R. The USP shall unify, within a simple user interface, the workflow between the associated security entities of a call session, including the call box, cameras, doors, intrusion zones and outputs.

S. The USP shall support video and audio calls:

1. Between USP Client User Interfaces
2. To and from USP Client User Interfaces and SIP devices
3. Between SIP devices

T. The USP shall provide an advanced and friendly call management user interface that allows operators to:

1. Connect standard USB headsets and webcams to USP Client User Interface workstations so that USP users can make voice and video calls through the USP Client User Interface.
2. Display the video associated with the call and switch between multiple video sources.
3. Receive incoming call notifications directly through a notification tray.
4. Initiate, answer, forward, place on hold, or cancel calls from a dedicated call dialog box.
5. Control cameras, doors, zones, and device outputs during a call.
6. Create a customizable list of contacts, so that users can quickly call their contacts. Contact lists shall include other USP users, as well as SIP devices.
7. Dial a phone number to make a call.
8. Dial a DTMF sequence during a call.
9. Monitor the availability status of a user and set its own availability status.
10. Access a history log of calls that the operator both initiated and received. This log shall show the time of the call, duration, direction and the reason for its ending. It shall be possible to redial one of the entries in the log.

U. The USP shall allow an operator to manage up to 10 calls simultaneously. The call queue shall show the status of each call: incoming, in call, or on hold. It shall be possible to hold and resume a call directly from the call queue.

V. The USP shall offer a call window. It shall be possible within the call windows to:

1. Switch between cameras associated with the call participant.
2. Open and lock doors associated with the call participant.
3. Arm and Disarm zones associated with the call participant.
4. Trigger outputs associated with the call participant.
5. Put on hold, resume, forward, and end a call.
6. Mute the microphone.
7. Hide the webcam video feed.

W. The USP shall have a built-in address book. The address book shall be available in the call dialog box, in which users can view and manage their list of contacts. From the address book, users shall be able to do the following:

1. Call a contact by simply double-clicking the contact name.
2. See the availability status of their contacts (users and SIP Devices).
3. Quickly display a contact's information, such as photo, name, and number.
4. Filter their contacts by type (SIP Device or User).
5. Create a list of favorites by adding and removing contacts.
6. Search for and call numbers that appear in the contact list.

X. The USP shall provide a graphical dial pad to allow the operator to make calls and dial DTMF tones during a call.

Y. The USP shall provide the ability to send public announcements via a microphone or uploaded pre-recorded messages. The users shall be able to do the following:

1. Create paging zones.
2. Associate any SIP callable entity with a paging zone.
3. Upload pre-recorded messages.
4. Trigger a live or pre-recorded message.

Z. The USP shall provide call reporting capabilities to allow for the investigation of the activities during specific call sessions. The report shall provide the capability to replay audio recordings and watch call sessions that have associated video. The Call report shall provide filters to query the call records by:

1. Date and time
2. Call session duration
3. Involved users and call stations
4. Call events and actions
5. Actions taken by a user on doors, intrusion zones, and outputs during the call session

AA. The USP shall give the capability to export a call session, including bidirectional audio, associated video, and log journal of the call session.

BB. It shall be possible to place the voice devices as icons on a map that shall display the call status of the voice device with a color code. A right-click on the voice device map icon shall allow the user to:

1. Answer or reject an incoming call.
2. Initiate a call to the device.
3. Put on hold and resume a call with the device.

CC. It shall be possible for an operator to select and broadcast his or her availability status, with the possible statuses being Available, Away and Busy. This status will appear with a color code in the call dialog box of other operators.

DD. The Contractor shall provide up to (See Plans) number of SIP connections.

EE. The Contractor shall provide up to (See Plans) number of SIP trunks.

FF. The Contractor shall provide a failover and bidirectional audio and video recording license for each SIP device.

GG. The contractor shall provide up to (See Plans) number of SIP public address.

HH. The CM shall provide the ability to broadcast public addressing messages to a collection of SIP devices included in a paging zone. The PA (Public address) feature shall support the following capability:

1. Define paging zones and assign SIP entities for each of them
2. Broadcast live and pre-recorded messages

2.22 USP GENERAL REQUIREMENTS

A. The Unified Security Platform (USP) shall be an enterprise class IP-enabled security and safety software solution.

B. The USP shall support the seamless unification of IP access control system (ACS), IP video management system (VMS), and IP automatic license plate recognition system (ALPR) under a single platform. The USP user interface (UI) applications shall present a unified security interface

for the management, configuration, monitoring, and reporting of embedded ACS, VMS, and ALPR systems and associated edge devices.

C. Functionalities available with the USP shall include:

1. Configuration of embedded systems, such as ACS, ALPR, and VMS systems.
2. Live event monitoring.
3. Live video monitoring and playback of archived video.
4. Alarm management.
5. Reporting, including creating custom report templates and incident reports.
6. The Federation feature for global monitoring, reporting, and alarm management of multiple remote and independent ACS, VMS, and/or ALPR systems spread across multiple facilities and geographic areas.
7. Global cardholder management across multiple facilities and geographic areas each with their own independent ACS system.
8. Microsoft Active Directory integration for synchronizing USP user accounts and ACS card-holder accounts.
9. Intrusion device and panel integration (live monitoring, reporting, and arming/disarming).
10. SIP Intercom device integration for bi-directional communication.
11. Integration with third party systems and databases via plug-ins (access control, video analytics, point of sale, and more).
12. Dynamic graphical map viewing.
13. Asset management system integration.

D. The USP shall be deployed in one or more of the following types of installations:

1. Unified access, ALPR, video platform, and any combination thereof.
2. Standalone access control, ALPR, or video platform.
3. Unified access and video platform that federates multiple remote ACS, VMS, ALPR.
4. Standalone video platform that federates multiple independent remote VMS.
5. Standalone access control that federates multiple independent remote ACS.
6. Standalone access control that federates multiple independent remote ALPR.

E. Licensing:

1. A single central license shall be applied centrally on the configuration server.
2. There shall be no requirement to apply a license at every server computer or client workstation.
3. Based on selected options, one or more embedded systems shall be enabled or disabled.

F. Hardware and Software Requirements:

1. The USP and embedded systems (video, license plate recognition, and access control) shall be designed to run on a standard PC-based platform loaded with a Windows operating system. The preferred operating system shall be coordinated with the Owner following the manufacturer supported operating systems.
2. The core client/server software shall be built in its entirety using the Microsoft .NET software framework and the C# (C-Sharp) programming language.
3. The USP database server(s) shall be built on Microsoft's SQL Server. The preferred SQL version shall be coordinated with the Owner and compatible with the USP.

4. The USP shall be compatible with virtual environments, including VMware and Microsoft Hyper-V.
5. The USP shall use the latest user interface (UI) development and programming technologies such as Microsoft WPF (Windows Presentation Foundation), the XAML markup language, and .NET software framework.

2.23 USP ARCHITECTURE

A. The USP shall be based on a client/server model. The USP shall consist of a standard Server Software Module (SSM) and Client Software Applications (CSA).

B. The USP shall be an IP enabled solution. All communication between the SSM and CSA shall be based on standard TCP/IP protocol and shall use TLS encryption with digital certificates to secure the communication channel.

C. The SSM shall be a Windows service that can be configured to start when the operating system is booted and run in the background. The SSM shall automatically launch at computer startup, regardless of whether or not a user is logged on the machine.

D. Users shall be able to deploy the SSM on a single server or across several servers for a distributed architecture. The USP shall not be restricted in the number of SSM deployed.

E. The USP shall support the concept of The Federation feature whereby multiple independent ACS, VMS, and ALPR installations can be merged into a single large virtual system for centralized monitoring, reporting, and alarm management.

F. The USP shall protect against potential database server failure and continue to run through standard off-the-shelf solutions.

G. The USP shall support up to one thousand instances of CSA connected at the same time. However, an unrestricted number of CSA can be installed at any time.

H. The USP shall support an unrestricted number of logs and historical transactions (events and alarms) with the maximum allowed being limited by the amount of hard disk space available.

I. The USP shall support uninterrupted video streaming. The CSA shall keep existing video connections active in the event that an SSM (except Archiver) becomes unavailable.

J. Roles-Based Architecture:

1. The USP shall consist of a role-based architecture, with each SSM hosting one or more roles.

2. Each role shall execute a specific set of tasks related to either core system, automatic license plate recognition (ALPR), video (VMS), or access control (ACS) functionalities, among many others. Installation shall be streamlined through the ability of the USP to allow administrators to:

    a. Deploy one or several SSM across the network prior to activating roles.
    b. Activate and deactivate roles as needed on each and every SSM.
    c. Centralize role configuration and management.

d. Support remote configuration.
e. Move roles over from one SSM to another.

3. Each role, where needed, shall have its own database to store events and role-specific configuration information.

4. Roles without databases, such as The Federation feature, Active Directory, and Global Cardholder Management, shall support near real-time standby without any third party fail-over software being required.

5. Directory Role:

a. The Directory Role shall manage the central database that contains all the system information and component configuration of the USP.
b. The Directory Role shall authenticate users and give access to the USP based on predefined user access rights or privileges, and security partition settings.
c. The Directory Role shall support the configuration/management of the following components common to the ACS, ALPR, and VMS sub-systems:

i. Security Partitions, users and user groups
ii. Areas
iii. Zones, input/output (IO) linking rules, and custom output behavior
iv. Alarms. Schedules, and scheduled tasks
v. Custom events
vi. Macros or custom scripts

d. The Directory Role shall support the configuration/management of the following components specific to VMS:

i. Video servers and their peripherals (e.g. audio, IOs, and serial ports)
ii. PTZ
iii. Camera sequences
iv. Recording and archiving schedules

e. The Directory Role shall support the configuration/management of the following components specific to ACS:

i. Door controllers, and input and output (IO) modules
ii. Doors, Elevators, and Access rules
iii. Cardholders and cardholder groups, credentials, and badge templates

f. The Directory Role shall support the configuration/management of the following components specific to ALPR:

i. ALPR units and cameras
ii. Hotlists, permit lists, and overtime rules

6. The Video Archiver Role shall be responsible for managing cameras and encoders under its control and archiving.

7. The Media Router Role shall be responsible for routing video and audio streams across local and wide area networks from the source (for example DVS) to the destination (for example CSA).
8. The Access Manager Role shall be responsible for synchronizing access control hardware units under its control, such as door controllers and I/O modules. This role shall also be responsible for validating and logging all access activities and events when the door controllers and I/O modules are online.
9. The Automatic License Plate Recognition (ALPR) Role shall be responsible for synchronizing fixed ALPR units (cameras) and mobile ALPR applications under its control. The ALPR Role shall also be responsible for logging all ALPR activities and events.
10. The Zone Manager Role shall be responsible for managing all software zones (collection of inputs) and logging associated zone events. Zones shall consist of inputs from both access control and video devices.
11. The Health Monitoring Role shall be responsible for monitoring and logging health events and warnings from the various client applications, roles, and services that are part of the USP. This role shall also be responsible for logging events within the Windows Event Log and for generating reports on health statistics and health history.
12. Optional Roles:

    a. The Active Directory Role shall be responsible for synchronizing user accounts and cardholder accounts with a Microsoft Active Directory server.
    b. The Intrusion Manager Role shall be responsible for managing third party intrusion devices such as alarm panels and perimeter detection devices. This role shall also be responsible for logging all intrusion events in a database.
    c. The Asset Manager Role shall be responsible for integrating and synchronizing with third party asset management systems and logging asset related events. This role shall also be responsible for supporting the execution of asset-related reports such as inventory reports and asset activity reports.
    d. The Plug-in Manager Role shall be responsible for the communication between the USP and third party systems such as video analytics, access control, ALPR, video, and building management systems.
    e. The Web SDK Role shall be responsible for connecting the USP to any application or interface developed with the Web Service SDK. Applications developed with the Web Service SDK shall be platform independent and rely on the REST protocol for communications.
    f. The Communication Management Role shall be responsible for registering the SIP communication endpoints and for managing the call routing.
    g. The Web Server Role shall be responsible for managing incoming Web Client connection and hosting the web pages for the Web Client. The Web Server Role acts as a proxy for the client connections and can be installed in a DMZ for additional security.
    h. The Media Gateway Role shall be responsible for connecting any video stream to a third party system using standard RTSP/RTSPS protocol. This role shall provide access to live and playback video.

K. Server Monitoring Service (Watchdog):

1. The USP shall include a Server Monitoring Service that continuously monitors the state of the Server Software Module (SSM) service.
2. The Server Monitoring Service shall be a Windows service that automatically launches at system startup, regardless of whether or not a user is logged into his account.
3. The Server Monitoring Service shall be installed on all PCs/servers running an SSM. In the event of a malfunction or failure, the Server Monitoring Service shall restart the failed

service. As a last resort, the Server Monitoring Service shall reboot the PC/server should it be unable to restart the service.

2.24 USP ACCESS CONTROL, VIDEO, AND ALPR UNIFICATION

A. The Monitoring UI shall present a true Unified Security Interface for live monitoring and reporting of the ACS, VMS, and ALPR. Advanced live video viewing and playback of archived video shall be available through the Monitoring UI.

B. The Configuration UI shall present a true Unified Security Interface for the configuration and management of the ACS, VMS, and ALPR.

C. The user shall be able to associate one or more video cameras to the following entity types: areas, doors, elevators, zones, alarms, intrusion panels, ALPR cameras, and more.

D. It shall be possible to view video associated to access control events when viewing a report.

E. It shall be possible to view video associated to intrusion panel events when viewing a report.

F. It shall be possible to view video associated to ALPR events when viewing a report.

G. The USP shall support the following Alarm Management functionality:

1. Create and modify user-defined alarms. An unrestricted number of user-defined alarms shall be supported.
2. Assign a time schedule or a coverage period to an alarm. An alarm shall be triggered only if it is a valid alarm for the current time period.
3. Set the priority level of an alarm and its reactivation threshold.
4. Define whether to display live or recorded video, still frames or a mix once the alarm is triggered.
5. Provide the ability to display live and recorded video within the same video tile using picture-in-picture (PiP) mode.
6. Provide the ability to group alarms by source and by type.
7. Define the time period after which the alarm is automatically acknowledged.
8. Define the recipients of an alarm. Alarm notifications shall be routed to one or more recipients. Recipients shall be assigned a priority level that prioritizes the order of reception of an alarm.
9. Define the alarm broadcast mode. Alarm notifications shall be sent using either a sequential or an all-at-once broadcast mode.
10. Define whether to display the source of the alarm, one or more entities, or an HTML page.
11. Specify whether an incident report is mandatory during acknowledgment.

H. The workflows to create, modify, add instructions and procedures, and acknowledge an alarm shall be consistent for access control, ALPR, and video alarms.

I. Alarms shall be federated, allowing global alarm management across multiple independent USP, ACS, VMS, and ALPR systems.

J. The USP shall also support alarm notification to an email address or any device using the SMTP protocol.

K. The ability to create alarm-related instructions shall be supported through the display of one or more HTML pages following an alarm event. The HTML pages shall be user-defined and can be interlinked.

L. Alarm unpacking and packing shall be supported where all the entities associated to an alarm can be display in the Monitoring UI with the single click of a button.

M. The user shall have the ability to acknowledge alarms, create an incident upon alarm acknowledgement, and put an alarm to snooze.

N. The user shall be able to spontaneously trigger alarms based on something they see in the system.

O. An alarm shall be configured in such a way that it remains visible until the source condition has been acknowledged.

P. The user shall be able to investigate an alarm without acknowledging it.

2.25 USP THREAT LEVELS

A. The USP shall support Threat Levels to dynamically change the system behavior to respond to critical events.

B. Threat Levels shall be activated and deactivated by the CSA operator with the right privilege.

C. Threat Levels shall be set on an area or on the entire system.

D. Threat Levels shall affect the system behavior by executing any action available in the USP such as: trigger output, start recording, block camera, override recording quality, arm zone, set a door in maintenance mode, and more.

E. The following specific actions shall be available with Threat Level:

1. Set minimum security clearance to restrict or permit access to cardholders on specific areas on top of the restrictions imposed by the access rules.
2. Set minimum user level to automatically log out user from the USP.
3. Set reader mode to change how the doors are accessed (for example card and PIN, or card or PIN).

F. A visible notification shall be displayed in all operator CSA when a Threat Level is activated.

2.26 USP REMOTE TASK

A. The USP shall provide, through a Remote Task, capabilities to remotely monitor and control the content of other workstations running the CSA (Monitoring UI) that are part of the same system.

B. The USP shall support video wall applications by connecting and controlling multiple workstations and monitors simultaneously.

C. The Remote Task shall be a graphical interface showing a replication of the remote workstation running the CSA (Monitoring UI).

D. The Remote Task shall allow the connection to other workstations using a low bandwidth mode to receive only snapshots of video viewed remotely.

E. The Remote Task shall allow the connection to other workstations using a spy mode to remain invisible to the remotely connected workstation. The spy mode option should be available to the user with permission to access the feature.

F. The functionality provided by the remote monitoring and control capability shall include:

1. Remote monitoring and control of the monitoring and alarm monitoring tasks.
2. Ability to remotely switch cameras, doors and zones into display tiles.
3. Ability to remotely control live and playback video.
4. Ability to remotely change the tile pattern.
5. Ability to remotely create and delete tasks.
6. Ability to remotely start/stop task cycling.
7. Ability to remotely go into full screen mode.
8. Ability to remotely save and reload the workspace.

2.27 USP ADVANCED TASK MANAGEMENT

A. USP shall support an infrastructure for managing Monitoring UI tasks used for live monitoring, day to day activities, and reporting.

B. Administrators shall be able to assign tasks and lock the operator's workspace. The user management of their workspace shall be limited by their assigned privileges.

C. Operators shall be able save their tasks as either Public tasks or Private tasks and in a specific partition. Public tasks shall be available to all users. Private tasks shall only be available to the owner of the task.

D. Operators shall be able to share their tasks by sending them to one or more online users. Recipients shall have the option to accept the sent task.

E. Operators shall be able to duplicate a task.

2.28 USP REPORTING

A. The USP shall support report generation (database reporting) for access control, ALPR, video, and intrusion.

B. Each and every report in the system shall be a USP task, each associated with its own privilege. A user shall have access to a specific report task if they have the appropriate privilege.

C. The workflows to create, modify, and run a report shall be consistent for access control, ALPR, and video reports.

D. Reports shall be federated, allowing global consolidated reporting across multiple independent USP, ACS, VMS, and ALPR systems.

E. Access control and ALPR reports shall support cardholder pictures and license plate pictures, respectively.

F. The USP shall support the following types of reports:

1. Alarm reports
2. Video-specific reports (archive, bookmark, motion, and more)
3. Configuration reports (cardholders, credentials, units, access rules, readers/inputs/outputs, and more)
4. Activity reports (cardholder, cardholder group, visitor, credential, door, unit, area, zone, elevator, and more)
5. ALPR-specific reports (mobile ALPR playback, hits, plate reads, reads/hits per day, reads/hits per ALPR zone, and more)
6. Health activity and health statistics reports
7. Other types of reports, including visitor reports, audit trail reports, incident reports, and time and attendance reports

G. Generic Reports, Custom Reports, and Report Templates:

1. The user shall the option of generating generic reports from an existing list, generating reports from a list of user-defined templates, or creating a new report or report template.
2. The user shall be able to customize the predefined reports and save them as new report templates. There shall be no need for an external reporting tool to create custom reports and report templates. Customization options shall include setting filters, report lengths, and timeout period. The user shall also be able to set which columns shall be visible in a report. The sorting of reported data shall be available by clicking on the appropriate column and selecting a sort order (ascending or descending).
3. All report templates shall be created within the Monitoring UI.
4. These templates can be used to generate reports on a schedule in PDF or Excel formats.
5. An unrestricted number of custom reports and templates shall be supported.

H. A reporting task layout shall consist of panes with settings (report length, filters, go and reset commands, etc.), the actual report data in column format, and a pane with display tiles. The user shall be able to drag and drop individual records in a report onto one or more display tiles to view a cardholder's picture ID, playback a video sequence, or an ALPR event.

I. The USP shall support comprehensive data filtering for most reports based on entity type, event type, event timestamp, custom fields, and more.

J. The reporting task shall have the ability to display results through graphics such as line charts, bar charts, stacked bar charts, doughnut charts, and pie charts.

K. The user shall be able to click on an entity within an existing report to generate additional reports from the Monitoring UI.

L. The USP shall support the following actions on a report: print report, export report to a PDF/Microsoft Excel/CSV file, export the graphics chart in JPG/PNG, and automatically email a report based on a schedule and a list of one or more recipients.

2.29 USP DASHBOARDS

A. The USP shall support the ability to create dashboards.

B. Operators shall be allowed to view dashboards if they are granted the appropriate privilege. Modification to dashboards should also be allowed to users granted the appropriate privilege.

C. Dashboards in the system shall be a USP task. A user shall have access to a specific dashboard task if they have the appropriate privilege.

D. Dashboards shall be saved either in a private folder or a public folder.

E. A dashboard shall consist of a canvas with carious widgets displayed on the canvas. All widgets should offer the ability to specify location and size to the widget, a title to the widget, a background color to the widget, and the ability to refresh periodically the content of the widget.

F. Dashboard widget types shall be:

1. Image: provides the ability to display an image (JPG, PNG, GIF, BMP) on a dashboard.
2. Text: provides the ability to display a text on a dashboard. The text style shall be configurable, so font, size, color, and alignment can be specified by the user.
3. Tile: provides the ability to display any entity of the USP inside of a tile.
4. Web page: provides the ability to display a URL on a dashboard.
5. Entity Count: provides the ability to display the total number of a specific entity type in the USP.
6. Reports: provides the ability to display the results of any saved reports in the system. The results shall be displayed either by showing the total number of results in the report, a set of top results from the report, or a visual graph from the data returned by the report.

G. It shall be possible to extend to the widgets of a dashboard using the SDK. This will provide the ability to develop custom widgets to the system.

H. The USP shall support the following actions on a dashboard: print dashboard, export dashboard to PNG file, and automatically email a report based on a schedule and a list of one or more recipients.

2.30 USP FEDERATION FEATURE: MONITORING OF REMOTE SYSTEMS

A. The USP shall support the concept of a Federation feature for access control, video, and ALPR.

B. The Federation feature shall allow multiple independent USP systems (Federated systems) to be unified into a larger virtual system (the Federation feature). This shall facilitate the global monitoring of multiple independent USP systems.

C. The Federation feature shall support the unification of multiple independent video surveillance systems or VMS.

D. Entities that shall be federated and monitored centrally from the Federation feature shall include alarms, areas, cameras, cardholders and cardholder groups, credentials, doors, elevators, ALPR events, and zones (monitored inputs).

E. The Federation feature shall support a cloud-based deployment, whereby the service and infrastructure will be updated automatically and provisioned by the service provider, without need for on-site hardware.

F. The Federation feature shall support Global Alarm Management from the Monitoring UI for access control, video, and ALPR.

G. The Federation feature shall support Global Report Generation from the Monitoring UI for access control, video, and ALPR.

H. The Federation feature shall support dozens of operator actions on remote (federated) entities from the Monitoring UI (for example, generating a global report taking into account events from multiple independent sites or acknowledging remote alarms).

2.31 USP ZONE MANAGEMENT

A. The USP shall support the configuration and management of zones for input point monitoring via the Zone Manager Role. A user shall be able to add, delete, or modify a zone if they have the appropriate privileges.

B. A zone shall monitor the status of one or more inputs points. Zone monitoring or input point monitoring shall be possible through the use of a controller and one or more input modules. Inputs from video cameras or video encoders shall also be accessible via a zone.

C. Depending on the hardware installed, supervised inputs shall be supported. Depending on the input module used, both 3-state and 4-state supervision shall be available.

D. A schedule shall be defined for a zone, indicating when the zone will be monitored.

E. Custom Events shall provide full flexibility in creating custom events tailored to a zone. Users shall be able to associate custom events to state changes in monitored inputs.

F. The ACS shall support one or more cameras per zone. Video shall then be associated to zone state changes.

G. Input/Output (IO) Linking:

1. Zone management shall support Input/Output (IO) Linking. I/O Linking shall allow one or more inputs to trigger one or more outputs.
2. IO Linking shall be available in offline mode when communication between the server and hardware is not available.
3. Custom Output Behaviors shall provide full flexibility in creating a variety of complex output signal patterns: simple pulses, periodic pulses, variable duty-cycle pulses, and state changes.
4. Through the “trigger an output” action, the ACS shall support the triggering of outputs with custom output behaviors.

2.32 USP USER AND USER GROUP SECURITY, PARTITIONS, AND PRIVILEGES MANAGEMENT

A. The USP shall support the configuration and management of users and user groups. A user shall be able to add, delete, or modify a user or user group if they have the appropriate privileges.

B. The USP shall support user authentication with claims-based authentication using external providers. External providers shall include:

1. ADFS (Active Directory Federation Services)
2. Azure Active Directory (through OpenID Connect)
3. Ping Identity (through OpenID Connect)
4. KeyCloak (through OpenID Connect)
5. Other Open ID Connect / SAML2 authentication agents

C. Common access rights and privileges shared by multiple users shall be defined as User Groups. Individual group members shall inherit the rights and privileges from their parent user groups. User group nesting shall be allowed.

D. User privileges shall be extensive in the USP. All configurable entities for the USP, including access control, video, and ALPR shall have associated privileges.

E. Specific entities, such as cardholders, cardholder groups, and credentials shall include a more granular set of privileges, such as the right to access custom fields and change the activation or profile status of an entity.

F. Partitions:

1. The USP shall limit what users can view in the configuration database via security partitions (database segments). The administrator, who has all rights and privileges, shall be allowed to segment a system into multiple security partitions.
2. All entities that are part of the USP can be assigned to one or more partitions.
3. A user who is given access to a specific partition shall only be able to view entities (components) within the partition to which they have been assigned. Access is given by assigning the user as an accepted user to view the entities that are members of a particular partition.
4. A user or user group can be assigned administrator rights over the partition.

G. It shall be possible to specify user and user group privileges on a per partition basis.

H. Advanced logon options shall be available such as dual logon and more.

I. It shall be possible to specify an inactive period for the Monitoring UI after which time the application shall automatically lock, while still preserving access to currently displayed camera feeds.

J. It shall be possible to review user permissions and determine:

1. For any entity in the system, which user group or user can view or modify it.
2. For any user group or user in the system, what are its privileges.
3. For any privilege in the system, which user group or user is allowed to perform the underlying action.

2.33 USP EVENT/ACTION MANAGEMENT

A. The USP shall support the configuration and management of events for video and ALPR. A user shall be able to add, delete, or modify an action tied to an event if he has the appropriate privileges.

B. The USP shall receive all incoming events from one or more ACS, VMS, and/or ALPR. The USP shall take the appropriate actions based on user-define event/action relationships.

C. The USP shall receive and log the following events:

1. System-wide events
2. Application events (clients and servers)
3. Area, camera, door, elevator, and ALPR events (reads and hits)
4. Unit events
5. Zone events
6. Alarm events
7. ALPR events
8. Health Monitoring events

D. The USP shall allow the creation of custom events.

E. The USP shall have the capability to execute an action in response to an access control, video, and ALPR event. The USP shall support the following list of actions, without being limited to:

1. Add bookmark
2. Arm intrusion detection area
3. Arm zone
4. Block and unblock video
5. Bypass input
6. Cancel postpone intrusion detection area arming
7. Clear input bypass
8. Clear task
9. Display a camera on an analog monitor
10. Display an entity in the CSA
11. Email a report
12. Email a snapshot
13. Export report
14. Forgives antipassback violation
15. Go home
16. Go to preset
17. Import from file
18. Override recording quality
19. Override with event recording quality
20. Override with manual recording quality
21. Play a sound
22. Postpone intrusion detection area arming
23. Reboot unit
24. Recording quality as standard configuration
25. Rest area people count

26. Reset parking zone inventory
27. Run a macro
28. Run a pattern
29. Send a message
30. Send a task
31. Send an email
32. Set parking zone occupancy
33. Set reader mode
34. Set the door maintenance mode
35. Set threat level
36. Start/Stop applying video protection
37. Start/Stop recording
38. Start/Stop transfer
39. Synchronize role
40. Temporary override elevator schedules
41. Trigger intrusion alarm
42. Trigger alarm
43. Trigger output
44. Trigger read
45. Unlock door explicitly

F. The USP shall allow a schedule to be associated with an action. The action shall be executed only if it is an appropriate action for the current time period.

2.34 USP SCHEDULES AND SCHEDULED TASKS

A. Schedules

1. The USP shall support the configuration and management of complex schedules. A user shall be able to add, delete, or modify a schedule if they have the appropriate privileges.
2. The USP shall provide full flexibility and granularity in creating a schedule. The user shall be able to define a schedule in 1-minute or 15-minute increments.
3. Daily, weekly, ordinal, and specific schedules shall be supported.

B. Scheduled Tasks

1. The USP shall support scheduled tasks for video, and ALPR.
2. Scheduled tasks shall be executed on a user-defined schedule at a specific day and time. Recurring or periodic scheduled tasks shall also be supported.
3. Scheduled tasks shall support all standard actions available within the USP, such as sending an email or emailing a report.

USP MACROS AND CUSTOM SCRIPTS

A. The USP shall enable users to automate and extend the functionalities of the system through the use of macros or custom scripts for access control, video, and ALPR.

B. Custom macros shall be created with the USP Software Development Kit (SDK).

C. A macro shall be executed either automatically or manually.

D. In the Monitoring UI, a macro shall be launched through hot actions.

2.35 USP DYNAMIC GRAPHICAL MAPS (DGM)

A. The USP shall support mapping functionality for access control, video surveillance, intrusion detection, ALPR, and external applications.

B. The USP shall provide a map centric interface with the ability to command and control all the USP capabilities from a full screen map interface.

C. It shall be possible to span the map over all screens of the USP client station. In the scenario where the map is spanned over all the screens of the USP client station it shall be possible to navigate the map including pan and zoom, and the map's moves shall be synchronized between all screens. Spanning the map over multiple screens must provide the same command and control capabilities than in a single screen display.

D. The DGM shall support the following file format and protocol for importing map background:

1. PDF
2. JPG
3. PNG
4. Web Tile Map Service (WTMS) and Web Map Service (WMS) defined by the Open Geospatial Consortium (OGC)
5. BeNomad
6. AutoCAD (DWG & DXF)

E. The DGM shall provide the following online map providers for use as map background and provide the ability to manage their service license if they require one:

1. Google Map, aerial, terrain (Licensed)
2. Bing Map, aerial, satellite, hybrid (Licensed)
3. ESRI ArcGIS (Licensed)
4. OpenStreet Map aerial (Licensed)
5. OVI hybrid

F. It shall be possible to configure a mixed set of maps made of GIS, online providers, and private imported files and link them together.

G. The DGM shall provide the ability to display all native entities of the USP including:

1. Cameras, fix, and PTZ
2. Doors
3. Camera sequences
4. Areas
5. Intrusion areas
6. Intrusion zones
7. License Plate Recognition cameras
8. Digital inputs

9. Digital outputs
10. Intercoms
11. Alarms
12. Macros
13. Police Car Patrollers

H. The DGM shall provide the ability to draw and display information over the map in the form of:

1. Vectoral shapes: lines, rectangles, polygons, ellipse
2. Pictures
3. Text

I. The DGM shall provide the ability to display any type of third party entities integrated through an SDK.

J. The DGM shall provide the ability to display layer of information in Keyhole Markup Language (KML) format.

K. The DGM shall provide the ability to the operator to manage layers of entities displayed over the map, being able to turn them on and off and changing the superposition order.

L. The DGM shall provide the ability to import data layers from one or more ESRI ArcGIS servers.

M. The DGM shall provide the operators with the ability to manage layers that are imported from ESRI ArcGIS. The operators shall be able to turn the layers on and off, as well as sort the layers.

N. The DGM shall offer built-in map data backup and restore for both map background and layers of entities.

O. The DGM shall provide the ability to import configuration from an eternal file such as:

1. AutoCAD layer for objects
2. CSV, Excel file

P. The DGM shall offer failover capabilities.

Q. The DGM shall scale up to several thousands of entities on a single map and hundreds of maps.

R. The DGM shall provide a means to update a map background without affecting the map object configuration.

S. The DGM shall offer a user-friendly graphical map designer to configure the maps.

T. The DGM shall provide a user friendly and intuitive navigation that includes:

1. The ability to create hierarchies of maps to facilitate navigation within and between various sites and buildings.
2. The ability to define favorites for recurrent position recall.
3. The possibility to create links between maps. The map links shall allow the link from one map to multiple maps representing the floors of a building. Navigating between floors of a building shall keep the zoom level of the map.

U. It shall be possible to monitor the state of entities on the map. It shall be possible to customize the icons of any entities represented on the map.

V. The DGM shall offer the ability to optionally set a graphical display notification of the motion detection.

W. The DGM shall offer a smart selection too to access the video. By clicking the location the user wants to see, the DGM will automatically select the cameras that can see this location and move the PTZ towards that location. This smart selection too shall take obstacles into consideration and not display cameras that cannot see the location because of a wall.

X. It shall be possible to select a location by drawing a zone of interest on the DGM, and to display all the entities that are part of that zone or interest at once.

Y. The user shall be able to select and display the content of multiple USP entities on the map in pop-up windows.

Z. The user shall be able to move, resize, and pain the USP entity pop-up windows to the map.

AA. It shall be possible to access live and playback video from the map.

BB. It shall be possible to monitor all entity event notifications from the DGM. Users shall be able to turn notifications on and off per entity.

CC. The DGM shall offer the ability to fully operate alarm monitoring. It shall be possible to:

1. Center the map on entities related to the alarm.
2. Visualize the Alarm notifications on the map and access the related videos from the map.
3. Trigger and receive alarms.
4. Act on the alarm from the DGM, including acknowledgements, forwarding, and investigation.
5. Visualize that an alarm occurred in an underlying linked map.

DD. The DGM shall provide the following search capabilities:

1. Search and center by entity name.
2. From the Display of an entity in the USP, locate the entity on the map and offer the ability to select another one close-by.
3. By street address, city, landmark, point of interest (using geocoder license from Google, ESRI, or other provider)

EE. Any update of map content by an administrator shall be immediately and dynamically pushed to all DGM users.

FF. The DGM shall support the use of GIS maps, private maps, or a combination of both for the map background.

GG. The DGM shall be compatible with any GIS compliant maps with the OGC and supporting WMTS and WMS. This includes, but is not limited to, ESRI maps. The DGM shall allow the selection of the appropriate GIS layers.

HH. The DGM shall provide an intuitive built-in map designer for entity positioning on the map using drag and drop. Any configuration shall be graphic.

II. It shall be possible to edit and configure multiple map objects at once.

JJ. All map design modifications shall be logged in an audit trail.

KK. Various actions shall be available within maps for execution through simple and intuitive double-click, right-click, or drag-and-drop functionality. Examples of actions available through maps shall include unlocking a door and acknowledging an alarm.

LL. Through the following functionalities, the DGM shall allow the management of USP alarms from the map

1. Locate on the map entities related to the alarm.
2. Display entities of the alarm with a specific icon, color, transparency level, and blinking rate.
3. List, select, and locate alarms.
4. Auto center the map on the highest priority alarm.
5. Handle the alarm from the map, including acknowledgement, forwarding, and investigation.
6. All map containers, such as hotspots or map links, shall reflect the alarm status of the contained entities.

MM. It shall be possible to add advanced functionality to map objects using the SDK. Any functionality available through the USP SDK shall be available within maps.

NN. The DGM shall offer lasso tools for:

1. Displaying entities at one location through a single action.
2. Triggering an action on all entities at one location in a single click.
3. Editing multiple entities at one location simultaneously.

OO. The DGM shall allow the display of USP entities selected from the map on a remote monitor (video wall).

PP. The DGM shall provide the ability to search within the map by entity name.

QQ. The DGM shall allow the use of KML overlay map information for both GIS and private maps. Moveable objects shall be supported using the KML.

RR. The Contractor shall provide licenses for each entity that is required to be shown on the graphical maps.

2.36 USP DIGITAL EVIDENCE MANAGEMENT SYSTEM (DEMS)

A. The USP shall support the ability to electronically share video exports with third parties.

B. The USP shall allow recipients to natively review exported video from a web browser, without the need to install software or browser plugins.

C. Video exported from the UPS will include the original file and timestamp information, as well as the system, workstation, and camera source metadata that can be viewed from the DEMS.

D. The USP shall support the ability to create a case within the DEMS, and assign associated incident details, when exporting video.

2.37 USP AUDIT AND USER ACTIVITY TRAILS (LOGS)

A. The USP shall support the generation of audit trails. Audit trails shall consist of logs of operator/administrator additions, deletions, and modifications.

B. Audit trails shall be generated as reports. They shall be able to track changes made within specific time periods. Querying on specific users, changes, affected entities, and time periods shall also be possible.

C. For entity configuration changes, the audit trail report shall include detailed information of the value before and after the changes.

D. The USP shall support the generation of user activity trails. User activity trails shall consist of logs of operator activity on the USP such as login, camera viewed, ALPR event viewed, badge printing, video export, and more.

E. The ACS shall support the following actions on an audit and activity trail report: print report and export report to a PDF/ Microsoft Excel/CSV file.

2.38 USP INCIDENT REPORTS

A. Incident reports shall allow the security operator to create reports on incidents that occurred during a shift. Both video-related and access control-related incident reports shall be supported.

B. The operator shall be able to create standalone incident reports or incident reports tied to alarms.

C. The operator shall be able to link multiple video sequences to an incident, access them in an incident report, and change the date or time of the sequences later on.

D. It shall be possible to create a list of Incident categories, tag a category to an incident, and filter the search with the category as a parameter.

E. Incident reports shall allow the creation of a custom form on which to input information on an incident.

F. Incident reports shall allow entities, events, and alarms to be added to support at the report's conclusions.

2.39 USP DATA INGESTION

A. The USP Shall allow the possibility to import external data from outside sources to enhance unification of data sources within the USP.

B. Each data source shall be defined by a set of fields and field types that describe the data source. Field types shall be:

1. String
2. 32 bit & 64 bit integer
3. Floating point number
4. Boolean
5. Timestamp
6. Binary (in a file or base 64)

C. The visualization of each data point from a data source shall be configurable to determine what fields from the data should be displayed. The configuration of each field shall be:

1. Which fields are displayed or hidden
2. What order are the fields displayed
3. A label to specify the name of the field (to have a key:value format)
4. An option to specify how to display the field (text value, Image, clipboard value, hyperlink to a web page, hyperlink to an entity in the system, sound file)

D. A privilege should be available for each data source to allow / deny access to specific user & user groups of the USP.

E. Ingested data shall be available in the USP reporting system.

F. Ingested data shall be available to display in the USP Dashboards.

2.40 USP THIRD PARTY INTEGRATION

A. Microsoft Active Directory Integration

1. The USP shall support a direct connection to one or multiple Microsoft Active Directory server via the Active Directory Role(s). Active Directory integration shall enable the synchronization of information from the Active Directory server to the USP.
2. Active Directory integration shall permit the central management of the USP users, user groups, cardholders, and cardholder groups.
3. The USP shall be able to connect to and synchronize data from multiple Active Directory servers (up to 10).
4. The USP shall support synchronizing Active Directory Universal Groups as well as security groups belonging to other domains within the same forest.
5. The USP shall support Microsoft Active Directory encryption using LDAP SSL.
6. When enabled, Active Directory shall manage user logon to the USP client applications through the user's Windows credentials. Logging on to the USP shall utilize native Active Directory password management and authentication features.
7. It shall be possible to synchronize the following USP entities and their information from Active Directory with the USP:

   a. Users (username, first and last names, email address, and more)
   b. User groups (user group name, description, and group email address)
   c. Active Directory attributes to USP custom fields

8. When enabled, the addition, removal, or suspension of a user's Windows account in Active Directory shall result in the creation, deletion, or disabling of the equivalent user account in the USP.
9. Supported synchronization methods for additions, modification, and deletions of synchronized entities shall include on first logon (users only), manual synchronization, and scheduled synchronization.
10. The USP shall support user connections across independent organizations by connecting to an identity provider using claims-based authentication such as ADFS (Active Directory Federation Services), Azure Active Directory, other OpenID Connect & SAML2 providers.

B. Intrusion Detection Integration:

1. The USP shall integrate with third party intrusion panels and devices via an Intrusion SDK. The Intrusion Manager Role shall manage communications with the intrusion panels. Communications with intrusion devices shall be over serial communications and/or an IP network.
2. Integration with intrusion panels shall be possible outside the release cycle of the USP. It shall be possible to add new integrations at any point in time.
3. Functionality available via the integration of intrusion devices with the USP shall include the following (where supported by the intrusion panel):

    a. Arm and disarm intrusion devices (manually, on schedule, or following a USP event).
    b. Activate or trigger intrusion device outputs.
    c. View intrusion events and alarms.
    d. Monitor the status, including arming status, of the intrusion devices.
    e. Video verification of intrusion events and alarms with video panels.
    f. Create USP zones using intrusion device inputs.

4. Currently supported intrusion panels include:

    a. Bosch G Series panels
    b. DSC Power Series panels
    c. DMP XR Series panels
    d. Honeywell Galaxy Dimension and Flex panels
    e. Vanderbilt SPC
    f. UTC Advisor Master and Advanced
    g. Bosch Map 5000

5. Additional intrusion devices supported:

    a. Buytime
    b. Alarm Panel Receiver
    c. Southwest Microwave RPMII

C. Third Party Access Control Systems:

1. The USP shall integrate with third party access control software via the SDK. Communications with access control software shall be over an IP network, and should not support administrative tasks such as cardholder management.

2. Integration with access control software shall be possible outside the release cycle of the USP. It shall be possible to add new integrations at any point in time.
3. Functionality available via the integration of access control software with the USP shall include the following (where supported by the access control solution):

    a. Synchronize access control entities and receive associated events and states within the USP, including:

        i. Cardholders and access rights
        ii. Visitors
        iii. Readers and doors
        iv. Alarms
        v. Inputs and outputs

    b. Monitor access control events.
    c. Monitor and Acknowledge access control alarms.
    d. Trigger actions and outputs in the access control software using hot actions and event-to-actions.
    e. Lock and unlock doors in the access control software.
    f. Video verification of access control events and alarms.
    g. Configure event-to-actions using the access control events and alarms.
    h. Generate Security Center reports using from the in the access control data.
    i. View and monitor states of door entities in the USP maps.

4. Currently supported access control manufacturers include:

    a. Tyco Softwarehouse CCURE
    b. UTC Lenel Onguard
    c. Amag Symmetry
    d. Siemens Sipass
    e. AssaAbloy ARX

D. Third Party Destination Dispatch Systems:

1. The USP shall integrate with third part destination dispatch (elevator control0 software via the SDK. Communications with the destination dispatch software shall be over an IP network.

2. Integration with destination dispatch software shall be possible outside the release cycle of the USP. It shall be possible to add new integrations at any point in time.

3. Functionality available via the integration of destination dispatch software with the USP shall include the following (where supported by the destination dispatch solution):

    a. Destination dispatch entity creation and reception of associated events and states within the USP, including:

        i. Floors and landings
        ii. Elevator cars (front/rear doors) and kiosks
        iii. Cardholders and credentials (if applicable)

b. Monitor destination dispatch events.
c. Trigger manual dispatch actions.
d. Video verification of destination dispatch events.
e. Configure event-to-actions using the destination dispatch events.
f. Generate Security Center reports using the destination dispatch data.
g. Support multiple readers

i. Kiosk internal readers
ii. USP readers

h. Kiosk advanced modes and passenger types.

4. Currently supported destination dispatch manufacturers include:

a. Otis Compass
b. Thyssenkrupp
c. Schindler
d. MCE

E. Asset Management Integration:

1. The USP shall integrate with third party asset management systems via the Asset Management Role.
2. Communications with asset management solutions shall be over an IP network (via software communications).
3. Functionality available via the integration of asset management systems with the USP shall include the following (where supported by the asset management systems):

a. Synchronize asset management system assets with USP asset entities.
b. Live monitoring of asset-related activity events, health events, and activity (asset online, asset offline, asset moves, or low battery).
c. Synchronization of asset management alarms with Security Center alarms.
d. Viewing video tied to asset-related activity and alerts within monitoring and reporting tasks.
e. Acknowledging alarms in Security Center which acknowledges alerts in the asset management system and vice versa.
f. Real-time tracking of asset locations on a per area basis.
g. Asset Management Inventory reporting task that details the current location (area) of an asset.
h. Asset Activity reporting task that provides a historical review of asset-related events and activity.

4. Currently supported asset management systems include:

a. Deister Key management
b. Morse watchmans
c. TRAKA

F. Additional Third Party Integrations:

1. The USP shall support multiple approaches to integrating third party systems. These shall include: Software Development Kits (SDKs), REST-based Web Service SDKs, RTSP Service SDKs, and more.
2. The USP architecture shall support the addition of new connectors to integrate to third party system integration, such as:

    a. Video analytics
    b. Third party video systems
    c. Third party access control systems
    d. ALPR integrations with pay stations, permit vendors, pay-by-phone vendors, and ticketing vendors
    e. Building management systems
    f. Access Control ecosystem (such as ID scanner, card synchronization, Guardtour, Morpho Biometrics)
    g. Transaction monitoring (POS, Barcode scanning, ATM)
    h. Industrial IoT (Modbus, BACnet, OPC, SNMP)
    i. Industrial Protocol Interface (BACnet, Modbus)
    j. Videowall (Barco, Eizo)
    k. Human resource management systems (HRMS)
    l. Autonomous Drone Integration
    m. Intelligent Keys (Salto SVN, Medeco XT, CLIQ)
    n. Gunshot Detection (Shot Spotter, Guardian GunShot)
    o. Dynamic Logbook
    p. Facial Recognition Framework
    q. Real-time Location Services - RTLS (HID)

2.41 USP SOFTWARE DEVELOPMENT KIT (SDK)

A. A USP SDK shall be available to support custom development for the platform.

B. The SDK shall include functionalities specific to the embedded automatic license plate recognition (ALPR), access control (ACS), and video (VMS) systems.

C. Integration with external applications and databases shall be possible with the SDK.

D. The SDK shall enable end-users to develop new functionality (user interface, standalone applications or services) to link the USP to third party business systems and applications, such as Badging Systems, Human Resources Management Systems (HRMS), and Enterprise Resource Planning (ERP) systems.

E. The SDK shall be based on the .NET framework.

F. The SDK shall support dynamic or transactional updates to the USP configuration. It shall also support change notification of USP entity configuration.

G. The SDK shall provide an extensive list of programming functions to view and/or configure core entities such as: users and user groups, alarms, custom events, and schedules, and more.

H. The SDK shall provide an extensive list of programming functions to view and configure ACS, VMS, and ALPR.

I. The SDK shall provide an extensive list of programming functions to view and configure most ACS entities such as: cardholders, cardholder groups, visitors, credentials, access rules (modify only), and custom fields.

J. The SDK shall be able to receive real time events from the following USP entities: users and user groups, areas, zones, cameras, video units, doors, door controllers (units), elevators, cardholders, cardholder groups, and credentials.

K. The SDK shall be able to query the history of events for areas, cameras, zones, alarms, cardholders, credentials, visitors, doors, query license plate read events, license plate hit events, generate a license plate hits report, generate a license plate reads report.

L. The SDK shall support the following alarm functions: view alarms in real time, acknowledge alarms, change priority, and change recipient.

2.42 NETWORK CAMERAS

A. Dome Camera – Scene Cameras

1. 4K indoor dome with IR and deep learning shall be AXIS P3268–LV

2. Provide recessed mounting kits for interior finished spaces.

3. Provide wall mount kits for penthouse areas.

4. Provide pendant kits for garage areas.

B. Dome Camera – Halls or Corridors

1. 4 MP indoor dome with IR and deep earning shall be AXIS M4216-LV

2. Provide recessed mounting kits for interior finished spaces.

C. Panoramic Scene Camera – 180 Degree Dome Camera

1. Panoramic 14 MP network camera shall be AXIS Q3819-PVE

2. Provide recessed mounting kits for interior finished spaces.

3. Provide wall mount kits for penthouse areas.

D. Provide pendant kits for garage areas. Multi Imager Dome Camera – Lobbies, Parking Garage and Building Perimeters

1. Exterior 15MP panoramic network camera shall be AXIS P3719-PLE

2. Provide recessed mounting kits for interior finished spaces.

3. Provide wall mount kits for penthouse areas.

4. Provide pendant kits for garage areas.

5. Provide corner wall mount kits on where shown building exteriors.a

E. Elevator Camera – Elevator Cabs

1. The 3MP fixed dome network camera shall be AXIS P9106-V

F. License Plate Camera – Vehicle Gates

1. The fixed bullet 1080p HDTV license plate camera shall be AXIS Q1700-LE
2. The specified product shall meet or exceed the following design specifications:

   a. The camera shall operate on an open source and Linux-based platform, and include a built-in web server.
   b. The camera shall be equipped with an IR-sensitive progressive scan megapixel sensor.
   c. The camera shall provide a removable IR-cut filter in day mode and infrared-pass filter 720 nm in night mode.
   d. The camera shall be equipped with a 18-137 mm lens.
   e. The camera shall provide a horizontal field of view between 16° and 2.3° and a vertical field of view between 9.6° and 1.3°
   f. The camera shall be manufactured with a wind survivability of 60 m/s (134 mph).
   g. The camera shall provide local video storage utilizing a microSD/microSDHC/microSDXC memory card expansion.
   h. The camera shall be manufactured with an IP66-, IP67-, and NEMA 4X-rated, IK10 impact-resistant aluminum enclosure with integrated dehumidifying membrane, IK08 impact-resistant glass front window and weather shield with black anti-glare coating.

3. The specified product shall meet or exceed the following performance specifications:

   a. Illumination

      1) The camera shall meet or exceed the following illumination specifications:

         i. Color: 0.16 lux
         ii. B/W: 0.03 lux
         iii. 0 lux with IR illumination on

   b. Resolution

      1) The camera shall be designed to provide video streams in HDTV 1080p (1920x1080) at up to 60 frames per second (60Hz mode) or 50 frames per second (50Hz mode) using H.264 or Motion JPEG.
      2) The camera shall support video resolutions including:

         a) 1400x1050 (4:3)
         b) 1280x960 (4:3)
         c) 1920x1080 (HDTV 1080p)
         d) 1280x720 (HDTV 720p)

      3) The camera shall provide maximum pixel density with 8x optical zoom:

a) 25 m (82 ft): 1912 px/m
b) 50 m (164 ft): 956 px/m
c) 250 m (820 ft): 191 px/m

4) The camera shall provide landscape format as well as the possibility to adjust the image to stream in corridor format.

c. Encoding

1) The camera shall provide independently configured simultaneous H.264 and Motion JPEG streams.
2) The camera shall provide configurable compression levels.
3) The camera shall support standard baseline profile with motion estimation.
4) The camera shall support motion estimation in H.264/MPEG-4 Part 10/AVC.
5) The camera shall support the following video encoding algorithms:

a) Motion JPEG encoding in a selectable range from 1 up to 50/60 frames per second.
b) Baseline Profile H.264 encoding with motion estimation in up to 50/60 frames per second.
c) Main Profile H.264 encoding with motion estimation and context-adaptive binary arithmetic coding (CABAC) in up to 50/60 frames per second.
d) High Profile H.264 encoding with motion estimation up to 50/60 frames per second.

6) The camera shall in H.264 | H.265 support combining Average Bit Rate (ABR) and Maximum Bit Rate (MBR)
7) The camera shall be able to deliver predictable storage using Average Bit Rate (ABR) bitrate controlling algorithm based on a bitrate budget and selected retention time.

a) The camera shall be able to deliver predictable storage using Average Bit Rate (ABR) bitrate controlling algorithm based on a bitrate budget and the selected retention time.

b) The ABR bitrate algorithm, depending on the bitrate budget and the selected retention time, shall adjust the bitrate to meet the bitrate budget over the whole retention time.

c) The ABR algorithm shall have a method to keep the video quality even during busy periods by allowing the current bitrate to be significantly above the configured average bitrate during significant parts of the retention time.

8) The camera shall in H.264 | H.265 support flexible retention period for Average Bit Rate (ABR) algorithm up to 1 year.
9) When using Average Bit Rate (ABR) the camera shall keep bitrate history up to at least 30 days.
10) The camera shall in H.264 | H.265 support reuse of past Average Bit Rate (ABR) history if a stream is disconnected and the camera reconnects with the same basic stream parameters.
11) When using Average Bit Rate (ABR), the camera shall in H.264 | H.265 support multiple parallel stream with independent ABR-history.

12) The camera shall issue bitrate degradation events when using Average Bit Rate (ABR) if the configuration is predicted to be

a) unrealistic
b) not fulfilling basic quality requirements
c) not fulfilling the bitrate budget.

13) The camera shall support scene adaptive bitrate control with one of the following capabilities to lower bandwidth and storage:

a) Automatic dynamic Region of Interest to reduce bitrate in unprioritized regions in order to lowering bandwidth and storage requirements.
b) Automatic dynamic Group of Pictures to lower bandwidth and storage requirements
c) Automatic dynamic Frames per Second to lower bandwidth and storage requirements

d. Transmission

1) The camera shall allow for video to be transported over:

d) HTTP (Unicast)
e) HTTPS (Unicast)
f) RTP (Unicast & Multicast)
g) RTP over RTSP (Unicast)
h) RTP over RTSP over HTTP (Unicast)
i) SRTP (Unicast & Multicast)

2) The camera shall support Quality of Service (QoS) to be able to prioritize traffic.

e. Image

1) The camera shall incorporate automatic and manual white balance.
2) The camera shall incorporate an electronic shutter operating in the range of 1/66500s to 2s.
3) The camera shall incorporate capture mode with the following settings:

a) HDTV 1080p (1920x1080) with WDR: 25/30 fps (50/60 Hz)
b) HDTV 1080p (1920x1080) without WDR: Up to 50/60 fps (50/60 Hz)

4) The camera shall incorporate forensic wide dynamic range functionality providing up to 120 dB dynamic range.
5) The camera shall support manually defined values for:

a) Saturation
b) Brightness
c) Sharpness
d) Contrast

6) The camera shall incorporate a function for optimization of low light behavior at different light levels.

7) The camera shall incorporate a function to manually correct barrel distortion, by using a slider to correct distortion in the image.
8) The camera shall allow for rotation of the image in steps of 180º.
9) The camera shall incorporate a function for Electronic Image Stabilization (EIS) for real-time image stabilization.
10) The camera shall incorporate automatic defog functionality.

f. Audio

1) The camera shall meet or exceed the following audio specifications:

a) The camera shall support audio simplex, with input sources
b) External microphone
c) External line device

2) The camera shall support automatic gain control.
3) Encoding

a) The camera shall support:

i. AAC LC at 8/16/32/48 kHz
ii. 24–bit LPCM 48 kHz
iii. G.711 PCM at 8 kHz
iv. G.726 ADPCM at 8 kHz
v. Opus at 8/16/48kHz

4) IR Illumination

a) The camera shall be equipped with built-in IR LEDs with a wavelength of 850 nm and with adjustable angle of illumination and intensity. Range of reach up to 40 m (131 ft) in wide field of view and 50 m (164 ft) in full tele view, or more depending on the scene.

g. User Interface

1) Web server

a) The camera shall contain a built-in web server making video and configuration available to multiple clients in a standard operating system and browser environment using HTTP, without the need for additional software.

2) Optional components downloaded from the camera for specific tasks shall be signed by an organization providing digital trust services.

3) Language Specification

a) The camera shall provide a function for altering the language of the user interface, and shall include support for at least 10 different languages.

4) IP addresses

a) The camera shall support both fixed IP addresses and dynamically assigned IP addresses provided by a Dynamic Host Control Protocol (DHCP) server.
b) The camera shall allow for automatic detection of the camera based on UPnP and Bonjour when using a computer with an operating system supporting this feature.
c) The camera shall provide support for both IPv4 and IPv6.
d) The camera shall provide support for IPv6 USGv6.

5) PTZ functionality

a) Provide digital PTZ functionality.
b) Provide preset positions functionality.
c) Provide optical zoom functionality:

i. Optical zoom: 8x

h. Event functionality
1) The camera shall be equipped with an integrated event functionality:
i. Audio
ii. Device status
iii. Temperature
iv. IP address
v. Network
vi. Shock detection
vii. System ready
viii. Edge storage
ix. I/O
x. PTZ
xi. Malfunctioning
xii. Movement
xiii. Preset position
xiv. Ready
xv. Scheduled and recurring
xvi. Video
xvii. Day-night mode
xviii. Live stream open
xix. Tampering
2) Response to triggers shall include event actions:
i. Day-night mode
ii. Defog
iii. Guard tours
iv. I/O
v. Send images, using FTP, HTTP, HTTPS, SFTP, email or network share
vi. IR illumination
vii. Send notification, using HTTP, HTTPS, TCP and email
viii. Overlay text

ix. Prset positions
x. Prioritized text
xi. Recordings
xii. Send SNMP trap messages
xiii. Send video clip, using FTP, HTTP, HTTPS, SFTP, email or network share
xiv. WDR mode

3) The camera shall provide memory for pre- and post-alarm recordings.

i. Edge storage
1) The camera shall support continuous and event controlled recording to:
i. Local memory added to the cameras microSD-card slot
ii. Network attached storage, located on the local network
2) The camera shall incorporate encryption functionality for the SD card.
3) The camera shall be able to detect and notify edge storage disruptions.

j. Protocol
1) The camera shall incorporate support for at least IPv4, IPv6 USGv6, ICMPv4/ICMPv6, HTTP, HTTPS, HTTP/2, TLS, QoS Layer 3 DiffServ, FTP, SFTP, CIFS/SMB, SMTP, mDNS (Bonjour), UPnP® , SNMP v1/v2c/v3 (MIB-II), DNS/DNSv6, DDNS, NTP, RTSP, RTP, SRTP, TCP, UDP, IGMPv1/v2/v3, RTCP, DHCPv4/v6, SOCKS, SSH, LLDP, CDP, MQTT v3.1.1, Syslog, Link-Local address (ZeroConf).
2) The SMTP implementation shall include support for SMTP authentication.

k. Text overlay
1) The camera shall:
i. Provide embedded on-screen text with support for date & time, and a customer-specific text, camera name, of at least 45 ASCII characters.
ii. Provide the possibility to choose different font sizes for embedded on-screen text, and to use white or black text on at least four different backgrounds.
iii. Provide the ability to manually set up and configure privacy masks to the image.
iv. Allow for the overlay of a graphical image, such as a logotype, into the image.

l. Security
1) The camera shall support the following:
i. Secure web browsing
ii. The use of HTTPS and SSL/TLS, providing the ability to upload signed certificates to encrypt and secure authentication and communication of both administration data and video streams.
iii. Restrict access to the built-in web server by usernames and passwords at three different levels.
iv. Certificate management
v. Provide centralized certificate management, with both pre-installed CA certificates and the ability to upload additional CA certificates. The certificates shall be signed by an organization providing digital trust services.
vi. Enhanced security features
vii. The use of signed firmware validates the firmware’s integrity before accepting to install it.

viii. The use of a secure boot process, based on the use of signed firmware, ensures that the camera can boot only with authorized firmware.
ix. Authentication
x. IEEE 802.1x (EAP-TLS) authentication.
xi. Restrict access to pre-defined IP addresses, commonly known as IP address filtering.
xii. Brute force delay protection

m. API support
1) The camera shall be fully supported by an open and published API (Application Programmers Interface), which shall provide necessary information for integration of functionality into third-party applications.
2) The camera shall conform to ONVIF profile G as defined by the ONVIF Organization.
3) The camera shall conform to ONVIF profile M as defined by the ONVIF Organization.
4) The camera shall conform to ONVIF profile S as defined by the ONVIF Organization.
5) The camera shall conform to ONVIF profile T as defined by the ONVIF Organization.

n. Embedded applications
1) The camera shall provide a platform allowing the upload of third-party applications into the camera.
2) The camera shall provide a license plate capture assistant.
i. Detection range
ii. Day: 20–100 m (66–328 ft)
iii. Night: 20–50 m (66–164 ft), up to 100 m (328 ft) with optional accessory IR-LED Illuminator
iv. Vehicle speed: up to 130 km/h (81 mph)
v. Coverage
vi. Single lane with optional edge analytics
vii. Two lanes with server based analytics

o. Installation and maintenance
1) The camera shall be supplied with Windows-based management software which allows the assignment of IP addresses, upgrade of firmware and backup of the cameras' configuration.
2) The camera shall support the use of SNMP-based management tools according to SNMP v1, 2c & 3 / MIB-II.
3) The camera shall allow updates of the software (firmware) over the network, using FTP or HTTP.
4) The camera shall provide the ability to apply a rectangle of customer-defined number of pixels to the image, which can be used as a pixel counter identifying the size of objects in number of pixels.
5) The camera shall accept external time synchronization from an NTP (Network Time Protocol) server.

6) The camera shall provide a built-in licence plate capture assistant that optimizes video settings based on mounting height, distance to vehicle, and expected vehicle speed.
7) The camera shall provide remote zoom functionality.
8) The camera shall provide autorotation functionality.
9) The camera shall detect tilt and roll angle automatically.

p. Access log
1) The camera shall provide a log file, containing information about the 250 latest connections and access attempts since the unit's latest restart. The file shall include information about the connecting IP addresses and the time of connecting.
2) The camera shall provide a connection list of all currently connected viewers. The file shall include information about connecting IP address, time of connecting and the type of stream accessed.

q. Camera diagnostics
1) The camera shall be equipped with LEDs, capable of providing visible status information. LEDs shall indicate the camera's operational status and provide information about power, communication with receiver, the network status and the camera status.
2) The camera shall be monitored by a Watchdog functionality, which shall automatically re-initiate processes or restart the unit if a malfunction is detected.
3) The camera shall send a notification when the unit has rebooted and all services are initialized.

r. Hardware interfaces
1) Network interface
i. The camera shall be equipped with one 10BASE-T/100BASE-TX Ethernet-port using a RJ45 connector and shall support auto negotiation of network speed (100 MBit/s and 10 MBit/s) and transfer mode (full and half duplex).
2) Inputs/Outputs
i. The camera shall be equipped with two configurable I/O ports, accessible via a removable terminal block. These inputs/outputs shall be configurable to respond to normally open (NO) or normally closed (NC) dry contacts. The output shall be able to provide 12 V DC, 50 mA.
3) Audio
i. The camera shall be equipped with one 3.5 mm jack for line/mic input.
4) Power
i. The camera shall be equipped with a DC power connector.
5) Other
i. The camera shall be equipped with an IDC punchdown connector

s. Enclosure
1) T`he camera shall:
i. Be manufactured with an IP66/67, NEMA250 4X rated, IK10 impact-resistant aluminum enclosure.
ii. Be fitted with a dehumidifying membrane.
iii. Be manufactured with IK08 impact-resistant glass front window.

iv. Be fitted with a weather shield with black anti-glare coating.

t. Power
   1) The camera shall provide power over Ethernet IEEE 802.3af/802.3at Type 1 Class 3
      i. Max: 12.95 W
      ii. Typical: 7.7 W
   2) 20-28 V DC
      i. Max: 13.5 W
      ii. Typical: 7.8 W
   3) 20-24 V AC
      i. Max: 20.0 V A
      ii. Typical: 12.4 V A

u. Environmental
   1) The camera shall:
      i. Operate in a temperature range of -40 ºC to +60 ºC (-40 ºF to 140 ºF)

4. Operate in a humidity range of 10–100% RH (condensing).

2.43 CAMERAS SET-UP AND CONFIGURATION

G. Closed-circuit television cameras shall conform to NTSC. The Contractor shall provide CCTV cameras in accordance with the "CCTV Camera Matrix", drawing which specifies locations, lenses, power requirements, mount type, installation details, and selected applicable sections of this specification.

H. Camera Field of View: The field of view shall be set by the Contractor to produce full view of Field of View. Follow the project construction drawings for design intent. Lack of coverage in accordance with the contractors proposed solution must be proposed with contractor bid documents. Failure to clearly annotate this notice within bid documents proposal mean contractor will provide all required coverage at the specified resolution as shown on the contract documents. The contractor may add or delete cameras where required to provide the required coverage and resolution. Adding or deleting infrastructure may also be in order. Infrastructure may not be reduce on Network Attached Storage in lieu of on board camera recording.

I. Camera Lenses: Camera lenses shall be of the type supplied with the camera from the manufacture. The lens shall be equipped with an auto-iris mechanism unless otherwise specified. Lenses having auto-iris, manual-iris and focus functions shall be supplied with connectors, wiring, receiver/drivers, and controls as needed to operate the lens functions. Lenses shall have sufficient circle of illumination to cover the image sensor evenly. Lenses shall not be used on a camera with an image format larger than the lens is designed to cover. Lenses shall be provided with pre-set capability.

2.44 VIDEO SERVER /STORAGE ENCLOSURE

A. Refer to Division 27

2.45 VIDEO MONITORING CLIENT

A. Refer to Section 28 05 31.10

2.46 SIGNAL TRANSMISSION COMPONENTS

A. Comply with requirements in Section 280513 "Conductors and Cables for Electronic Safety and Security."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine pathway elements intended for cables. Check raceways and other elements for compliance with space allocations, installation tolerance, hazards to camera installation, and other conditions affecting installation.

B. Examine roughing-in for LAN, WAN, and IP network before device installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 WIRING

A. Retain one of first two paragraphs below. Delete both if wiring method is indicated on Drawings.

B. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

C. Wiring Method: Install cables in raceways unless otherwise indicated.

1. Retain one or both of first two subparagraphs below to make exceptions to the wiring method specified above.
2. Except raceways are not required in accessible indoor ceiling spaces and attics.
3. Except raceways are not required in hollow gypsum board partitions.
4. Conceal raceways and wiring except in unfinished spaces.

D. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

E. Splices, Taps, and Terminations: For power and control wiring, use numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

F. For LAN connection and fiber-optic and copper communication wiring, comply with Section 271300 "Communications Backbone Cabling" and Section 271500 "Communications Horizontal Cabling."

G. Retain paragraph below only if required by manufacturer. Show independent-signal circuit-grounding methods and details on Drawings.

H. Grounding: Provide independent-signal circuit grounding recommended in writing by manufacturer.

3.3 VIDEO SURVEILLANCE SYSTEM INSTALLATION

A. Install cameras level and plumb.

B. Coordinate first paragraph below with Drawings.

C. Install cameras with 84-inch- (2134-mm-) minimum clear space below cameras and their mountings. Change type of mounting to achieve required clearance.

D. Set pan unit and pan-and-tilt unit stops to suit final camera position and to obtain the field of view required for camera. Connect all controls and alarms, and adjust.

E. Install power supplies and other auxiliary components at control stations unless otherwise indicated.

F. Retain first paragraph below if not indicated on Drawings, or coordinate with Drawings, schedules, and other Sections. Indicate which components are to be fitted with tamper switches and which Section covers tamper-switch connection.

G. Install tamper switches on components indicated to receive tamper switches, arranged to detect unauthorized entry into system-component enclosures and mounted in self-protected, inconspicuous positions.

H. Identify system components, wiring, cabling, and terminals according to Section 260553 "Identification for Electrical Systems."

3.4 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

B. Retain first paragraph below to require Contractor to perform tests and inspections.

C. Perform tests and inspections.

1. Retain subparagraph below to require a factory-authorized service representative to assist Contractor with inspections, tests, and adjustments.
2. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
3. Inspection: Verify that units and controls are properly installed, connected, and labeled, and that interconnecting wires and terminals are identified.
4. Pretesting: Align and adjust system and pretest components, wiring, and functions to verify that they comply with specified requirements. Conduct tests at varying lighting levels,

including day and night scenes as applicable. Prepare video-surveillance equipment for acceptance and operational testing as follows:

5. Prepare equipment list described in "Informational Submittals" Article.
6. Verify operation of auto-iris lenses.
7. Set back-focus of fixed focal length lenses. At focus set to infinity, simulate nighttime lighting conditions by using a dark glass filter of a density that produces a clear image. Adjust until image is in focus with and without the filter.
8. Set back-focus of zoom lenses. At focus set to infinity, simulate nighttime lighting conditions by using a dark glass filter of a density that produces a clear image. Additionally, set zoom to full wide angle and aim camera at an object 50 to 75 feet (17 to 23 m) away. Adjust until image is in focus from full wide angle to full telephoto, with the filter in place.
9. Set and name all preset positions; consult COR.
10. Set sensitivity of motion detection.
11. Connect and verify responses to alarms.
12. Verify operation of control-station equipment.
13. Test Schedule: Schedule tests after pretesting has been successfully completed and system has been in normal functional operation for at least 14 days. Provide a minimum of 10 days' notice of test schedule.
14. Operational Tests: Perform operational system tests to verify that system complies with Specifications. Include all modes of system operation. Test equipment for proper operation in all functional modes.
15. Video surveillance system will be considered defective if it does not pass tests and inspections.
16. Prepare test and inspection reports.

3.5 ADJUSTING

B. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose. Tasks shall include, but are not limited to, the following:

1. Check cable connections.
2. Check proper operation of cameras and lenses. Verify operation of auto-iris lenses and adjust back-focus as needed.
3. Adjust all preset positions; consult COR.
4. Provide a written report of adjustments and recommendations.

3.6 CLEANING

A. Clean installed items using methods and materials recommended in writing by manufacturer.

B. Clean video-surveillance-system components, including camera-housing windows, lenses, and monitor screens.

3.7 DEMONSTRATION

A. Train personnel to adjust, operate, and maintain video-surveillance equipment.

END OF SECTION

This page is intentionally left blank.

SECTION 28 46 00 - ADDRESSABLE FIRE ALARM SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of contract, including General and Supplementary conditions and Division 01 specification sections, apply to work of this section.

B. Division 07 Penetration Firestopping

C. Division 08 Door Hardware

D. Division 21 Fire Suppression

E. Division 23 Heating Ventilation and Air Conditioning Monitoring & Control (HVAC)

F. Division 26, Basic Electrical Materials and Methods applies to work specified in this section.

G. Division 26 “Electrical Identification” applies to work in this section for labeling of conduit and equipment.

H. Division 28 “Smoke Management” applies to work specified in this section.

I. Division 28 Electronic Safety and Security.

J. Related work specified in other divisions of these specifications.

1. Installation of duct type smoke detectors. Control wiring from Fire Alarm Control equipment to mechanical fans, dampers, control equipment both low voltage and line voltage and all other control wiring associated with mechanical equipment.

1.2 SUMMARY

A. This specification describes an addressable Fire Detection and alarm signaling system. The control panel shall be intelligent device addressable, analog detecting, low voltage and modular, with digital communication techniques, in full compliance with all applicable codes and standards. The features and capacities described in this specification are required as a minimum for this project and shall be furnished by the contractor. This contractor shall be the Engineer of record for the Fire Detection and alarm signaling system.

B. The system shall include all required hardware, raceways, interconnecting wiring and software to accomplish the requirements of this specification and contract drawings, whether or not specifically itemized herein or on Contract Documents.

C. The system shall operate as a noncoded, continuous sounding system, which will sound alarm devise until manually silenced, as herein specified.

D. The system shall be wired as a Class X system for the system networked communication loop and Class B system for all other SLC, IDC and NAC circuits unless otherwise required to be Class A in accordance with local jurisdictional requirements.

E. The system as specified shall be supplied, installed, tested and approved by the local Authority Having Jurisdiction, and turned over to owner in an operational condition.

F. The contractor shall be capable of providing a “UL Listing Certificate” for the complete system.

G. Contractor shall adjust locations and quantities of fire alarm devices as required to comply with local codes. As minimum, an additional 10 audio/visual alarms, 20 smoke detectors, and 25 addressable interface devices shall be included in price including labor.

H. Contractor shall assume all responsibilities for obtaining a fire alarm permit.

1. Contractor / Fire Alarm Installer shall develop a submittal including plan drawings, calculations, etc. to submit to the local jurisdictional authority in order to obtain a permit.
2. Contractor / Fire Alarm Installer shall provide and apply a seal / signature to fire alarm drawings as required by the authority having jurisdiction in order to obtain a permit.

1.3 SUBMITTALS

A. Procedure - prepare and make submittals listed in accordance with Division 01, “Submittals” as required by Local Authority Having Jurisdiction.

B. Submittals shall be submitted in a three-part review process as follows:

1. Product data

    a. Include all project data as required herein.

2. Device layouts

    a. All devices in public areas shall be located on drawings with mounting height. Coordinate device locations with light fixtures, diffusers, fire protections heads, etc.
    b. Devices shall not be located on architectural feature walls.

3. Final shop drawings

    a. Include information as required herein.
    b. Final shop drawings shall be submitted after device location approval.

C. Product Data – For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and furnishings. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories. Complete manufacturer’s catalog data including supervisory power usage, alarm power usage, battery calculations, voltage drop calculations, physical dimensions, and finish and mounting requirements. The data shall include but is not limited to the following:

1. Control panels
2. Cabinets
3. Manual stations
4. Batteries
5. Battery charger
6. Smoke sensors
7. Installer’s training history
8. Visual alarms
9. Audio/visual alarms

10. Addressable interface devices
11. Central processing unit
12. Wiring conductors
13. Wire connectors
14. Thermal sensors
15. Electromagnetic door hold-open devices
16. Remote alpha numeric LCD annunciators with control capabilities.
17. Two-way voice communication system
18. Manufacturer's recommended calibrated test method for smoke sensors and smoke detectors.
19. Include Underwriters Laboratories or Factory Mutual listing cards for equipment provided.

D. Drawings

1. Detailed drawings for the fire alarm system shall consist of illustrations, schedules, performance charts, power calculations, point lists, instructions, riser diagrams, wiring diagrams, device finishes and complete detailed drawings of the fire alarm system.
2. A descriptive index of drawings in the submittal with drawings listed in sequence by drawing number.
3. A legend sheet identifying device symbols, nomenclature, and conventions used in the package.
4. Floor plans drawn to a scale not less than 1/8 inch equals 1 foot which clearly show locations of devices, equipment, risers, panels, electrical power connections, approximate location of conduit runs, and other details required to clearly describe the proposed system.
5. A ¼" scale plan view of the fire command center and security office with dimensioned layout and required clearances of all equipment therein.
6. Location of control panels, detectors, supervisory switches, manual pull stations, visual/audible alarms and electrical devices. Clearly and completely indicate the function of the control panel and devices. Indicate conduit routing and sizes, and the number of conductors contained in each. Indicate points of connection and terminals used for electrical field connections in the system, with a wiring color code. Indicate termination points of devices and indicate the interconnection of modules required for proper operation of the system. Indicate interconnection between modules and devices. Control diagrams shall be supplemented with a narrative description of the system. Point-to-point wiring diagrams shall indicate control panel wiring and make and model of devices and equipment. Signal circuit diagrams shall show current draw and load by device and by circuit.
7. Coordination Drawings: reflected ceiling plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:

    a. Light Fixtures
    b. HVAC registers
    c. Fire protection equipment interfaces
    d. Special suppression system interfaces

8. Provide a fire alarm system function matrix as referenced by NFPA 72. Matrix shall illustrate alarm input/out events in association with initiation devices. Matrix summary shall include system supervisory and trouble output functions.

E. Power Calculations

1. Battery size shall be a minimum of 125% of the calculated requirement. Provide the following supporting information:

    a. Supervisory power requirements for all equipment.
    b. Alarm power requirements for all equipment.
    c. Power supply rating justification showing power requirements for each of the system power supplies. Power supplies shall be sized to furnish a total connected load condition, including future shell space fit-out, plus 25% spare capacity
    d. Voltage drop calculations for wiring runs demonstrating worst-case conditions.
    e. NAC circuit design shall incorporate a minimum 20% spare capacity for future expansion.

F. Field Test Reports

1. Preliminary and acceptance tests.
2. Include the control panel and initiating and indicating devices, a unique identifier for each device with an indication of test results, and signature of the factory-trained technician of the control panel manufacturer and equipment installer. With reports on preliminary tests, include printer information.

G. Record Drawings

1. Upon completion, and before final acceptance of the work, submit a complete set of CADD generated as-built drawings for the fire alarm system, including components and any other associated appurtenances. Include as-built circuit diagrams complete with conductor color codes and a listing of initiating device locations and fixing voltage for each. Submit an electronic set of all documentation. Submit as-built drawings in addition to the record drawings required by Division 01, “Operation and Maintenance Data”.
2. List of FACP alphanumeric address names
3. Request for formal inspection and tests
4. When tests have been completed and corrections made, submit a signed, dated certificate with a request for formal inspection and tests.
5. Software operating and upgrade manuals.
6. Program software backup, complete with data files.

H. Operation and Maintenance Manuals

1. Fire alarm control panel
2. Smoke and thermal sensors
3. Interface and control modules
4. Submit in accordance with Division 01, “Operation and Maintenance Data”. Include current unit prices and source of supply for parts list, and a list of parts recommended by the manufacturer to be replaced after one year and three years of service. Include in the fire alarm control panel, full and comprehensive manufacturer’s repair and service manuals.

1.4 QUALITY ASSURANCE

A. Qualifications the manufacturer's authorized distributor must substantiate that within a 50-mile radius of the job site, there is an established agency which stocks a full complement of parts and offers full service during normal working hours on all equipment to be furnished and that the agency will supply parts without delay and at a reasonable cost.

B. Qualifications of Installer: Prior to installation, submit data for approval showing that the Contractor has successfully installed fully addressable, analog intelligent interior fire alarm systems of the same type as specified herein, or that the Contractor has a firm contractual agreement with a subcontractor having such required experience. Include the names and locations of at least two installations where the Contractor or the subcontractor referred to above, has installed such systems. Indicate the type and design of each system and certify that each system has performed satisfactorily in the manner intended for a period of not less than 18 months. Submit names and phone numbers of points of contact at each site.

C. Codes and Standards: Except as modified by governing codes and where more stringent standards are specified by the contract documents, comply with the latest applicable provisions and the latest recommendations of the following:

1. National Fire Protection Association (NFPA): NFPA 70, "2011 National Electrical Code": NFPA 72, "National Fire Alarm and Signaling Code": NFPA 241, "Standard for Safeguarding Construction, Alteration and Demolition Operations": NFPA 101, "Life Safety Code": NFPA 720, "Standard for the Installation of Carbon Monoxide (CO) Detection and Warning Equipment".
2. Factory Mutual (FM): FM 37825, "1952 Approved Guide".
3. Underwriters Laboratories (UL): UL FPED, "Fire Protection Equipment Directory; UL 268, "Smoke Detectors for Fire Protective Signaling Systems;" UL 164, "Control Units for Fire Protective Signaling Systems, UL 197/ANSI, "Codes applicable to Americans with Disabilities Act Compliance", "Testing for Fire Resistive Cables" UL 2196, "Cables for Power-Limited Fire-Alarm Circuits" UL 1424.
4. Americans with Disabilities Act
5. Local and City Codes and Amendments.
6. International Building Code, IBC-2018 with local amendments.
7. International Fire Code, IFC-2018 with local amendments.

D. Federal Specifications Compliance: Comply with FED-STD-595, "Colors used in Government Procurement".

E. Guarantee - all components, parts and assemblies supplied by the manufacturer shall be guaranteed against defects in materials and workmanship for a period of 12 months upon acceptance. Warranty service shall be provided by a trained specialist of the equipment manufacturer. The specialist shall be based in a fully-staffed branch office located within 50 miles from the job site.

F. Testing - conduct a total system test for Architect/Engineer and Local Fire Department. Tests shall include as a minimum.

1. Verify operation of all manual pull stations and detectors.
2. Verify line supervision of each initiating and indicating circuit.
3. Verify the operation of each initiating circuit.
4. Verify operation of all indicating devices.
5. Verify operation of all alarm-initiated functions.

6. Perform smoke test(s) as directed by the Local Fire Department. Provide electricians, and factory representatives to perform as many tests as required to approve smoke management system. The Engineer, Owner and Architect shall be advised a minimum of five working days before each test.

G. All equipment provided as part of this section shall be the product of a single fire alarm equipment manufacturer.

H. Equipment and devices shall be from a manufacturer who has been manufacturing similar products for a minimum of 5 years. Furnish materials and equipment that are current products of one manufacturer regularly engaged in the production of such equipment.

I. Provide services of a factory trained and certified representative or technician, experienced in the installation and operation of the type of system provided. The representative shall be a minimum NICET Level 2 in Fire alarm and licensed in the State if required by law.

J. Regulatory Requirements

1. Devices and equipment for fire alarm service shall be listed by Underwriters Laboratories, Inc. and listed in UL FPKD or approved by Factory Mutual and listed in FM P7825. The omission of these terms under the description of any item of equipment described shall not be construed as waiving this requirement.

K. Requirements for Fire Protection Service

1. Equipment and material shall have been tested by Underwriters Laboratories, Inc. and listed in UL FPKD or approved by Factory Mutual and listed in FM P7825. The omission of these terms under the description of any item of equipment described shall not be construed as waiving this requirement.

L. Standard Products

1. Materials and equipment shall be standard new products of a manufacturer regularly engaged in the manufacturer of such products. Select material from one manufacturer, and not a combination of manufacturers, for any particular classification of materials.

M. Modification of References

1. In NFPA publications referred to herein, consider advisory provisions to be mandatory, as though the word “shall” had been substituted for “should” wherever it appears; interpret reference to “Authority Having Jurisdiction”.

1.5 DELIVERY, STORAGE AND HANDLING

A. Protect equipment delivered and placed in storage from the weather, humidity and temperature variation, dirt and dust, and other contaminants.

B. Do not deliver or install projects or material until spaces are enclosed and completely dry.

1.6 SPARE PARTS

A. Spare parts shall be directly interchangeable with the corresponding components of the installed system. Spare parts shall be suitably packaged and identified by nameplate, stamping or tagging. Furnish the following:

1. Four keys or tools for resetting manual systems.
2. Four keys for locks of control panels or cabinets.
3. Three (bases and heads) of each type smoke (area and duct) and thermal sensors.
4. Three of each type monitor module.
5. Three of each type control module.
6. Three fuses of each type provided. Spare fuses shall be mounted in the fuse holder located inside each control panel.
7. One of each type audio/visual device.
8. One of each type visual device.

1.7 SERVICE AGREEMENT

A. Technical Support: Beginning with Substantial Completion, provide software support for 1 year.

PART 2 - PRODUCTS

2.1 SYSTEM DESIGN

A. Acceptable Manufacturers: Refer to Section 26 05 03.

B. Scope

1. The work covered by this section of the specifications includes the furnishing of all labor, equipment, materials, and performing all operations in connection with the installation of the multiplex addressable Fire Alarm System as shown on the drawings, as hereinafter specified, and as directed by the architect/engineer.
2. The Fire Alarm System shall consist of all necessary hardware and software equipment to perform the following functions:

a. The Fire Alarm Control Panel and auxiliary power panels shall provide power, annunciation, supervision and control for the system. FACP shall be capable of calling up detailed information for each addressable notification appliances including the appliance location, status, condition, type of appliance and configured appliance settings.
b. Provide Class B initiating device circuits.
c. Provide Class A signaling line circuits for the network.
d. Fire fighters two-way Supervised Voice Communication Operations.
e. Multi-Channel one-way Supervised Automatic Voice Alarm Operations. Arrange circuit to allow individual, selective and all-call voice and visual notification by zone. Notification appliance circuits shall be zoned to correspond with the building fire barriers and other building features.
f. Each stair tower NAC shall be separately zoned.
g. Remote Manual and Automatic Control of elevators, remote monitoring of sprinkler, fire pump, and emergency power systems.

h. Interface to Division 23 smoke control equipment, including but not limit to smoke control related fan systems and smoke dampers, with appropriate outputs, control functions, verification monitoring and graphics.
i. Interface to the building network lighting control system.
j. Supervision of building bi-directional radio amplification system.
k. Interface to building security & access control systems.

3. Each item of the Fire Alarm System shall be listed as a product of a single fire alarm system manufacturer under the appropriate category by the Underwriters' Laboratories, Inc. (UL), and shall bear the "U.L." label. The Control Equipment for all Systems shall be listed under UL category UOJZ as a Single Control Unit.
4. The complete installation shall conform to the applicable sections of NFPA-72, NEC 760, Life Safety Code 101, and Local Authorities Having Jurisdiction.
5. Nodes as defined for this specification shall be intelligent, microprocessor-based devices that connect to, and handle network communications.
6. By programmable selection at each node:

   a. The specific detail information of any point connected to any node in the network may be made accessible (declared public) to the network.
   b. Points within each node shall be able to be grouped by area, type of device, type of function, or any other user selectable category, and custom labeled as a point list. A point list shall be acted upon as though it was a point for purposes of interaction with the node custom control program. Detail information shall not burden the point list messages, only the quantity and type of status shall be broadcast into the network.
   c. System software and configuration updates applied to all network nodes with single download from any node.

7. Multi-Node Networks must be capable of high bandwidth (100mbps) IP based communication.
8. Survivability: All detection and control equipment used for the function of fire smoke control system interface, in addition to meeting requirements of NFPA 70, all wiring, regardless of voltage, shall be fully enclosed within continuous raceways and be 2-hour protected.

C. Alarm System

1. Furnish and install a fully field programmable/addressable analog fire detection system. The System shall determine the number and types of modules installed, the number of analog addressable loops, and all installed devices. It shall determine the type of device and the device number. The System shall use addressable signaling line circuits and addressable indicating appliance circuits with individual device supervision and annunciation, primary and secondary supervision. Include control panels, central processing unit, microphone, signal zone selectors, manual pull stations, smoke sensors, thermal sensors, addressable input interface devices, control and isolation devices, analog/addressable loop modules, audio/visual devices, visual devices, wiring, connections to devices, outlet boxes, junction boxes, and other necessary material for a complete operating system. System shall allow for loading or editing special instructions and operation sequences as required. System shall be site programmable to accommodate and facilitate expansion or changes. System shall be capable of generating the programming necessary to establish a fully functional general alarm system upon initialization. Software operations are to be stored in a non-volatile programmable memory. Loss of primary and secondary power shall not erase the instructions stored in memory. Selective input/output control functions based on ANDing,

Oring, NOTing, timing and special coded operations shall be incorporated in the resident software programming of the system.

D. Job Site Changes

1. To accommodate and facilitate job site changes, initiating and indicating circuits shall be individually configurable on site to provide either alarm/trouble operation, alarm only, trouble only, current limited alarm, no alarm, normally closed device monitoring, a non-latching circuit or an alarm verification circuit.

E. Operations

1. Display

a. Under normal condition, front panel shall display a “SYSTEM NORMAL” or equivalent message and the current time and date.

2. Sequence of Operation

a. Operation of manual stations or activation of area smoke sensors and thermal sensors including any manual or automatic initiating device shall cause the following unless noted otherwise or as required by AHJ:

1) Annunciate device type, location by building, floor, circuit and time on FACP mounted alphanumeric annunciator and graphics panel.
2) Log into the system history archives all activity pertaining to the alarm condition.
3) Print alarm condition to system printer.
4) Trip communications dialer to alert monitoring agent/Fire Department. (Response will be required to reset FACP.)
5) Building audio/visual devices to sound, except activation of a single smoke detector shall not sound devices until a second device of any type is activated, on devices programmed for Alarm Verification. Speakers and visual devices shall be activated in the area of alarm or as required by AHJ.
6) Operate prioritized outputs to release magnetically held smoke doors throughout the building and as indicated on the contract drawings. Any designated normally locked doors shall be unlocked via an interface to the security and access control system.
7) Operate prioritized outputs to signal the elevator recall trip functions. Activation of heat detector in elevator machine room or shaft shall activate an elevator power shunt trip function.
8) Operate prioritized outputs for controlling operation of dampers and fans, as required, and integration of signal/control to all other systems.
9) Automatic Voice Evacuation Sequence shall perform as outlined below:

a) Sound a pre-announced tone followed by a field programmable digitized custom evacuation message, on the floor of alarm, the floor below and the floor above. The visual signals shall operate in a similar pattern.
b) A simultaneous message shall be delivered via all alarm speakers installed on the remaining floors indicating the requirement for occupants of these floors to remain alert for further instruction.
c) An automatic announcement or tone evacuation signal shall be capable of interruption by the operation of the system microphone to

give voice evacuation instructions overriding the pre-programmed sequences.

10) Firefighter Two-Way Voice Communication Sequence shall perform as outline below:

a) The system shall incorporate a Firefighter Two-Way Communication operation. All fire phone locations shall be connected to the Master phone, located at the fire alarm control panel. The operation shall be as follows:
b) The act of plugging a handset into an emergency jack or removal of any warden phone from its normal hook position shall cause the appropriate phone circuit LED to flash and a distinctive audible device to sound at the control panel. The subsequent selection of the indicated circuit, and picking up on the Master phone, shall silence the audible tone, and cause the flashing LED to turn steady. This action shall couple the remote phone to the Master phone to provide direct and private communication. Attempting to use a subsequent phone on the same circuit shall not activate the LED or tone for that circuit. Any new circuits activated shall, however, cause their discrete phone circuit LED and tone to activate.
c) The Two-Way Communications system shall provide the capacity to handle simultaneous use of multiple remote phones. The system shall be configured to allow for remote paging from any remote phones location via the system speakers, as manually selected at the fire alarm control panel.

11) Operate prioritized outputs to Public Address system.

3. Supervisory Conditions

a. Display the origin of the supervisory condition report at the local fire alarm control panel graphic LCD display.
b. Activate supervisory audible and dedicated visual signal. Audible signals shall be silenced from the control panel by the supervisory acknowledge switch.
c. Record within system history the initiating device and time of occurrence of the event.
d. Print supervisory condition to system printer.
e. Send the event information to the Management Station with device type and custom message.

4. Trouble Condition

a. Display the origin of the trouble condition report at the local fire alarm control panel graphic LCD display.
b. Activate trouble audible and dedicated visual signal. Audible signals shall be silenced from the control panel by the trouble acknowledge switch.
c. Trouble conditions that have been restored to normal shall be automatically removed from the trouble display queue and not require operator intervention. This feature shall not prelude the logging of trouble events to the historical file.
d. Record within system history the occurrence of the event, the time of occurrence and the device initiating the event.
e. Print supervisory condition to system printer.
f. Send the event information to the Management Station with device type and custom message.

5. System Reset

    a. “System Reset” button shall be used to return to its normal state after an alarm condition has been remedied. The display shall step the user through the reset process.
    b. Should an alarm condition continue to exist, system will remain in an abnormal state. System control relays shall not reset. The panel audible signal and the alarm LED shall be on. The display will indicate the total number of alarms and troubles present in the system along with a prompting to review the points.

6. History Logging

    a. The control panel shall have the ability to store multiple events in an event buffer. These events shall be stored in a battery-protected memory. Events shall also be printed to the alarm printer.

7. Access Levels

    a. There shall be a minimum of four access levels provided for operators and supervisors via user-defined pass codes. Changes to pass codes shall be made only by authorized personnel.
    b. Should an invalid code be entered the operator shall be notified with a message.
    c. Access to a level will only allow the operator to perform actions within that level and actions of lower levels, not higher levels.
    d. The following functions shall have access levels associated with them:

        1) System Reset
        2) Set Time/Date
        3) Manual Control
        4) On/Off/Auto Control
        5) Disable/Enable
        6) Clear Historical Log
        7) Change Alarm Verification
        8) Program Update

8. Detection Operation (Smoke Sensors)

    a. Smoke sensors shall be smoke density measuring devices having no self-contained alarm set point (fixed threshold.) The alarm decision for each sensor shall be determined by the fire alarm control panel. The control panel shall determine the condition of each sensor by comparing the sensor value to the stored values.
    b. Control panel shall maintain a moving average of the sensors’ smoke chamber value to automatically compensate (move the threshold) for dust and dirty conditions that could affect detection operations. System shall automatically maintain a constant smoke obscuration sensitivity for each sensor (via the floating threshold) by compensating for environmental factors. Smoke obscuration sensitivity shall be adjustable at least twice a day and within UL 26B window (0.5 percent to 4.0 percent) to compensate for any environment.
    c. System shall automatically indicate when an individual sensor needs cleaning. When a sensor’s percentage of compensation reaches a predetermined value, a “DIRTY SENSOR” trouble condition or similar display shall be audibly and visually indicated at the control panel for the individual sensor. Additionally, the LED on the sensor base shall glow steady giving a visible indication at the sensor location. To prevent false alarms, these “DIRTY” conditions shall in no way decrease the amount of smoke obscuration necessary for system activation.

d. Control panel shall perform an automatic self-test routine on each sensor which will functionally check sensor sensitivity electronics and ensure the accuracy of the values being transmitted to the control panel. Sensors that fail this test shall indicate a trouble condition with the sensor location at the control panel.
e. An operator at the control panel, having a proper access level, shall have the capability to manually access the following information for each initiating device:

1) Primary status
2) Device type
3) Present average value
4) Present sensitivity selected
5) Sensor range (normal, dirty, etc.)

f. An operator at the control panel, having a proper access level, shall have the capability to manually control the following for each sensor:

1) Alarm detection sensitivity values.
2) Enable or disable the point.
3) Control a sensor's relay driver output.

g. It shall be possible to program the control panel to automatically change the sensitivity settings of each sensor based on time-of-day and day-of-week (for example, to be more sensitive during unoccupied times and less sensitive during occupied periods.)
h. Control panel shall have the capability of being programmed for a pre-alarm or two-stage function. This function allows an indication to occur when, for example, a 3 percent sensor reaches a threshold of 2.5 percent smoke obscuration.
i. For increased smoke detection assurance, individually addressed smoke sensors shall be provided with field adjustable alarm verification. Only a verified alarm shall initiate the alarm sequence operation. System shall be initially set up with a 30-second verification period.

9. Detection Operation (Thermal Sensors)

a. Thermal sensors shall be combination rate-of-rise/fixed temperature sensing. The alarm decision for each sensor shall be determined by the fire alarm control panel. The control panel shall determine the condition of each sensor by comparing sensor value to stored values. Sensor shall have the ability from the control panel to adjust its temperature setting.
b. Control panel shall maintain a moving average of the sensors' heat sensing value to automatically compensate (move the threshold) for dust and dirty conditions that could affect detection operations. System shall automatically maintain a constant heat sensing sensitivity for each sensor (via the floating threshold) by compensating for environmental factors.
c. System shall automatically indicate when an individual sensor needs cleaning. When a sensor's percentage of compensation reaches a predetermined value, a "DIRTY SENSOR" trouble condition or similar display shall be audibly and visually indicated at the control panel for the individual sensor. Additionally, the LED on the sensor base shall glow steady giving a visible indication at the sensor location. To prevent false alarms, these "DIRTY" conditions shall in no way decrease the amount of heat sensing necessary for system activation.
d. Control panel shall perform an automatic self-test routine on each sensor which will functionally check sensor sensitivity electronics and ensure the accuracy of the values being transmitted to the control panel. Any sensor that fails this test shall indicate a trouble condition with the sensor location at the control panel.

e. An operator at the control panel, having a proper access level, shall have the capability to manually access the following information for each initiating device:

1) primary status
2) Device type
3) Present average value
4) Present sensitivity selected
5) Sensor range (normal, dirty, etc.)

f. An operator at the control panel, having a proper access level, shall have the capability to manually control the following for each sensor:

1) Alarm detection sensitivity values.
2) Enable or disable the point.
3) Control a sensor's relay driver output.

F. Primary Power

1. Obtain primary power 208/120 VAC 50/60hz, at the emergency panel in the electrical room location as indicated. Primary power source shall be identified FIRE ALARM SYSTEM with a red and white engraved plastic sign permanently affixed to the face of the switch. Install lock clips on circuit breakers in the "ON" position.

G. Auxiliary Power (Secondary Power)

1. Provide for system operation in the event of primary power source failure. Transfer from normal to auxiliary (secondary) power or restoration from auxiliary to normal power shall be automatic and shall not cause transmission of a false alarm.

a. Batteries

1) Provide rechargeable lead acid type with sufficient ampere-hour rating to operate the system under supervisory and trouble conditions, including audible trouble signal devices for 24 hours and audible and visual signal devices under alarm conditions for an additional 15 minutes. House batteries either within the control panel or in a separate substantial steel cabinet, and finish on inside and outside with enamel paint; equip with a non-corrosive base and cylinder lock keyed to match FACP. Separate cells to prevent contact between terminals of adjacent cells and between terminals and other metal parts. Locate cabinet to allow convenient viewing and servicing of the batteries. A separate cabinet shall have twice the volume of batteries it will contain. The battery cabinet, if provided, shall be identified FIRE ALARM SYSTEM BATTERY CABINET with a red and white engraved plastic sign permanently affixed to the face of the panel.

b. Battery Charger

1) Provide solid state automatic float type, capable of recharging completely discharged batteries to fully charged condition in 24 hours or less. Locate charger within the control panel or within the battery cabinet. Provide voltmeter and ammeter to indicate battery voltage and charging current.

H. Wiring

1. Conductors

a. Provide in accordance with NFPA 70, NFPA 72 IBC and IFC. Conductors shall be copper. Conductors for 120/208-Volt circuits shall be No. 12 AWG minimum; single conductors for low-voltage D.C. circuits shall be a minimum No. 18 AWG twisted minimum. Conductors shall be color-coded. Provide wiring in electrical metallic tubing conduit in dry locations not enclosed in concrete or where not subject to mechanical damage. Conceal conduit in finished areas. Identify conductors within each enclosure where a tap, splice, or termination is made. Identify conductors by plastic-coated, self-sticking, printed markers or by heat-shrink type sleeves. Wire the alarm initiating and notification signal devices so that removal will cause the system trouble device to sound. Each conductor used for the same specific function shall be distinctively color-coded. Use two different color codes for each interior alarm circuit; one for each loop. Each circuit color code wire shall remain uniform throughout circuit. Plenum rated cable can be used where approved by engineer and is concealed but accessible.

2. Terminations

a. Connections, junctions and conductor terminations shall be made with screw terminals at risers only. Terminate strips everywhere except in control panels. Terminations with operating voltage of 50-Volts or more shall be provided with protective cover and shall be labeled with the voltage.

2.2 COMPONENT DESIGN

A. Colors

1. Provide finish colors under this section in accordance with FED-STD-595.

B. Fire Alarm Control Panel (FACP)

1. Requirements

a. FACP shall comply with the applicable requirements of UL 864 10th Edition. Panel shall be modular, installed in a surface-mounted steel cabinet with cylinder lock. The door shall be hinged to allow access for service. Control panel shall be a neat, compact assembly containing components and equipment required to provide the specified operating and supervisory functions of the system. Control panel switches shall be within the locked cabinet. A suitable means shall be provided for testing the control panel visual indicating devices (meter or lamps.) Meter and lamps shall be plainly visible when the cabinet of the control unit is closed. Each initiating circuit shall be powered and supervised so that a signal on one zone does not prevent the receipt of signals from other zones. Loss of power, including any batteries, shall not require the reloading of a program from any source. Upon restoration of power, start-up shall be immediate, automatic and shall not require manual operation. Loss of primary power or the sequence of applying primary or emergency power shall not affect the transmission of alarm, supervisory or trouble signals. Enclosures shall be provided with ample gutter space to allow proper clearance between the enclosure and live parts of the panel equipment.

b. Each FACP shall be intelligent, with its own microprocessor and memory. Each FACP shall be UL listed independently as a fire alarm control unit. Each FACP shall be capable of automatically updating the initial System Program to accommodate added or deleted devices on any analog circuit. Each FACP shall be capable of identifying and programming a General Alarm condition for all installed devices. The system shall be capable of identifying the number of analog addressable circuits, the number of devices on all circuits, the device type and location. The System shall be capable of incorporating all new devices into the System program. System shall display at the control panel, the sensitivity of remote addressable photoelectric or ionization smoke sensor devices and thermal heat sensor devices. The system shall be capable of displaying 160 characters of system and user text (4x40 alphanumeric display). Control panel shall automatically return the normal mode after a predetermined time (1 hour) after being in the service mode. Addressable devices shall be individually identified by the system, and any quantity of addressable devices shall be in alarm at any time up to the total number connected to the system. Control panel shall be capable of supporting non-addressable as well as addressable devices. The Control panel shall be capable of supporting conventional zones in addition to analog/addressable circuits. The Control Panel shall provide for addressable remote conventional zones that are hardwired to any device addressability as well as remote sensitivity measurement shall be performed on the same pair or wires. System shall be capable of having multiple addressable devices in alarm simultaneously. FACP shall have a service mode to permit the arming and disarming of individual detection or output devices as well as manually operating output devices. Status of these devices shall be displayed upon command from the FACP. Control panel shall automatically return to normal mode in the event the panel remains unattended in the service mode. Control panel shall be able to receive and process alarms even in the service mode. FACP shall be capable of:

1) Smart Start auto initialization.
2) Smart Start Program Update.
3) Program all functions from the FACP front panel.
4) Counting the number of addressable devices within a “circuit” which are in alarm.
5) Counting “circuits” which are in alarm.
6) Counting number of addressable devices which are in alarm on system.
7) Differentiating among types of addressable devices such as ionization smoke sensors, photoelectric smoke sensors, thermal heat sensors, control elements, collective zone interfaces, point identification devices, and manual stations.
8) Assigning priorities to type of detectors, circuits or groups of detectors.
9) Provide remote serial alpha numeric LCD display for all remote annunciator locations.
10) Indicate on FACP alphanumeric display, as a minimum, the following: Building Number, Floor, Type of Device, and Device Address.
11) Supporting 2500 addressable devices.
12) Provide Fireman’s Override Control Panel as required by IBC, to override control of air handling equipment, dampers and smoke control devices as required. This panel shall comply with the requirements of U.L. smoke control listing.
13) Automatic evacuation voice message which operates as a multi-channel system, allowing evacuation tones and voice messages be transmitted simultaneously to different zones. Visual alarms shall operate in unison with voice alarm system.

2. The system shall be compliant with requirement of NFPA 720 as a Carbon Monoxide Detector Control Unit and shall meet UL 2075 listing requirements. all inputs from CO sensor shall be indicated visually and audibly at the control panel. CO sensor inputs shall be distinct and descriptively annunciated from other signals.
3. The system modules shall communicate with an RS485 network communication protocol. All module wiring shall be to terminal blocks, which shall plug into the system card cage.
4. Logic

    a. The fire alarm system shall support generic functions that deal with binary states (True/False, high/low), and produce desired outputs from one or more binary inputs (for example, alarm outputs from spot detectors, VESDA detectors, monitor modules or manual station inputs). AND, OR, NOT, Any N, D Latch, RS Latch, Time Base Control, Start Timer, Restart Timer are generic functions. Generic functions can be used as inputs to other function.

5. Supervision

    a. FACP shall supervise each individual device on an initiating circuit such that trouble supervisory, normal, pre-alarm and alarm thresholds are individually annunciated. Each device on an addressable initiating circuit shall be checked to include the following: Sensitivity, response, opens, shorts, ground faults, functionality and status.

6. Reporting a Failure

    a. FACP shall report the failure of a device’s transmitting components, open or shorted, on an addressable initiating circuit. Device shall be recognized and identified by location within the circuit to the specific devices, and other devices on the circuit shall continue to function properly.

7. Devices

    a. FACP shall report by specific device and address, any device which has been removed from an addressable initiating circuit and shall not disrupt the operation of the remaining devices to function. The system shall be capable of sounding a Trouble if the device replaced is a different device type than the device removed.

8. Accessories

    a. FACP shall be completely equipped and be provided with 25 percent spare initiating and indicating circuits, including modules, enclosure space, terminal strips, internal electronic memory and other necessary accessories complete and ready to accept future circuits. The FACP shall be capable of automatically updating the System Program to adjust for such changes.

9. Power

    a. FACP shall provide power necessary for the devices connected to it, including relay and remote annunciators. Provide a green LED to indicate normal system power is functioning.

10. Hardware and Software

    a. Hardware and software which define system configuration and operation shall be provided. Memory data and operating system software shall be contained in a non-volatile memory.

11. Smoke Sensors

    a. Smoke sensors shall be provided with alarm verification with field-adjustable time from 0 to 60 seconds. System shall initially set up with a 30-second verification period.

12. Detector Sensitivity

    a. FACP shall be capable of measuring and adjusting the sensitivity of sensors. Provide an alphanumeric display to display custom messages and give readings of sensor sensitivity, sensor by sensor. It shall not be possible to change the sensor sensitivity from the FACP within maximum and minimum values as defined by the UL listing of the sensors. System shall be capable of listing sensor sensitivity settings on the printer for permanent record.

13. Self-Test Routine

    a. Control panel shall continuously perform an automatic self-test routine on each sensor which will functionally check sensor sensitivity and ensure the accuracy of the values being transmitted to the control panel. Any sensor that fails this test shall indicate a trouble condition with the sensor location at the control panel.

14. Resetting and Testing the System

    a. It shall be possible to test, reset and alarm silence from the FACP. New unacknowledged alarms and troubles shall be distinctively displayed on both the visual display and the printer and differentiated from previous alarm and troubles. System shall automatically indicate the total quantity of alarms and trouble which have occurred prior to reset at the control unit. No alarm or trouble indication shall be resettable until it has been acknowledged. It shall not be possible to reset the system until alarms have been acknowledged.

15. FACP Switches

    a. FACP switches shall allow authorized personnel to accomplish the following, independent of the main operating console:

        1) Trouble silencing switch which transfers trouble signals to an indicating lamp.
        2) Evacuation alarm silencing switch which, when activated during alarm, silences alarm devices and, upon clearing the alarm, causes operation of the system trouble signals until the switch is returned to the normal position. Upon activation of a second alarm while silenced, causes the evacuation alarm to re-sound. Operation of the switch when there is no evacuation alarm causes operation of the system trouble signals.
        3) Reset zones after initiating devices have been returned to normal.
        4) Perform a complete operation test of the microprocessor with a visual indication of satisfactory communications with each board.

5) Test panel LEDs for proper operation without causing a change in the condition on any zone.

16. Field Programming Equipment

a. Provide field programming equipment, software devices, software, computers and other equipment necessary, including interconnection cables to accommodate field software programming changes to be made by the owner to change device descriptions, sensitivity setting, control, device type and addition or deletion of devices.

17. Management Station

a. A Management Station shall be a PC based, display and software package UL listed for this application. The Management Station shall have as a minimum, the following:

1) Intuitive graphic user interface.
2) Global and local command abilities.
3) Time-based control for entire system.
4) SVGA graphics support.
5) Event display by color and icon.
6) Full touch screen support.
7) Integration with building management station.
8) Provide a UPS with minimum 1-hour full speed operating capacity (including any required Network repeaters) for each workstation.
9) Printers: Each workstation shall have one (1) printer.
10) Printer shall be dedicated to FA System alarms and shall be provided with a minimum 1-hour UPS.

18. Lockable Equipment

a. Lockable equipment shall have a keyed lock. All devices and cabinets shall be keyed alike.

19. Networking

a. Digital communication capabilities using either DC digital or fiber optic technologies or combinations of both as required for the control panel to communicated with remote transponders or network nodes.
b. Capability shall exist within the system to extend the network at any node.

C. System Enclosure

1. Enclosure needed to hold all the cards and modules as specified with at least spare capacity for extra cards. The enclosure outer door shall be either black or red. Provide the color as to the local AHJ requirements. The outer doors shall be capable of being a left hand open or a right hand open.
2. Provide system enclosure for all amplifiers. Where required by the manufacturer, provide means for venting heat from the enclosure either by having enclosure sides and top vented or the doors vented.

D. System Printer

1. The logging printer shall be UL listed with the system. This parallel printer shall be supervised for: online/offline, out of paper, paper jam, power off and system connection. The printer shall be a: high speed, 24 dot matrix, wide carriage, and capable of using tractor or friction fed paper. Supervised network connection shall be either Style 4 or 7 as required by local requirements.

E. Manual Stations

1. Provide an addressable noncoded double action type with mechanical reset features. Locate stations as indicated. Stations shall be die cast aluminum semi-flush or surface-mounted. Surface-mounted boxes shall be painted the same color as alarm station.
2. Mount stations with the base at 4 feet above finished floor and no more than 5 feet from any door, measured horizontally, as shown.
3. Provide each station with screw-type terminals of proper number and type to perform functions required. Break-glass-front stations will not be permitted; however, a pull-lever, break-glass-rod type is acceptable.
4. The manual alarm station shall require a key to reset or test.

F. Smoke Detectors

1. Provide analog addressable smoke detectors of the photoelectric type which shall communicate actual smoke chamber values to the system fire alarm control panel. Detectors shall be uniquely identifiable to FACP.
2. Detectors shall be listed to UL 268, 7th Edition and shall be documented compatible with the control equipment to which they are connected. Detectors shall be listed for both ceiling and wall-mount applications.
3. Detector shall be UL listed for operation in a 95% relative humidity (RH) environment.
4. Each detector base shall contain a LED that, when the control panel determines that a detector is in the alarm or trouble condition, the control panel shall command the LED on that detector's base to turn on steady, indicating the abnormal condition.
5. Detector's electronics shall be immune from false alarms caused by electromagnetic interference and radio frequency interference.
6. All detector addressing information shall be stored in the fixed base. Addressing information that is stored in the removable detector is not acceptable.
7. Where required, the detectors shall incorporate an addressable Carbon Monoxide (CO) sensor. The CO sensor shall be selectable as an input to the multi-criteria fire detector algorithm and as an independent life-safety CO gas detector, in compliance with NFPA 720. The multi-criteria detector with CO input shall be UL 2075 compliant as a gas and vapor detector.
8. The multi-criteria detector with CO sensor shall support the use of an ambient Carbon Monoxide warning signal at the panel. This ambient CO level shall be user configurable in parts per million (PPM) for the set threshold of the warning and event type generated by the warning. This event can be used to trigger system logic.

G. Duct Smoke Detectors

1. Detectors in duct shall be analog addressable photoelectric type and listed by UL or FM for duct installation.
2. Duct detectors shall be provided with approved duct housing, mounted exterior to the duct, and shall be provided with perforated sampling tubes extending across the width of the duct. Where duct detectors are exposed to the weather a weatherproof enclosure shall be available.

3. Activation of duct detectors shall cause actuation of the fire alarm control panel in the same manner as other supervisory initiating devices and in addition, cause all air handling units to be deactivated.
4. Detector to be provided with indicating lamp and test switch and in test position bypass fan shutdown feature.

H. Heat Detectors

1. Provide analog addressable heat detectors of the combination rate-of-rise and fixed temperature type which shall communicate actual heat values to the system fire alarm control panel. Detector temperature setting shall be accomplished via the FACP. Detectors shall be uniquely identifiable to FACP.
2. Detectors shall be listed to UL 521 and shall be documented compatible with the control equipment to which they are connected. Detectors shall be listed for ceiling applications.
3. Each detector base shall contain an LED that, when the control panel determines that a detector is in the alarm or trouble condition, the control panel shall command the LED on that detector's base to turn on steady, indicating the abnormal condition.
4. Detector's electronics shall be immune from false alarms caused by electromagnetic interference and radio frequency interference.
5. Detectors shall be nominal 24 Vdc powered by initiating circuit.

I. Beam Smoke Detector

1. Beam type smoke detector shall be supplied at the locations shown on the drawings. The beam smoke detector shall consist of a separate transmitter and receiver capable of being powered separately or together. The detector shall operate in either a short range of 30 to 100 ft. or a long range of 100 to 300 ft. The detector shall feature a bank of alignment LEDs on both the transmitter and receiver to ensure proper alignment without the use of special tools. The detector shall utilize an automatic gain control to compensate for gradual signal deterioration from dirt accumulation on the lenses. The detectors shall be powered from the system control panel.

J. Addressable Point Identification Device

1. The Point Identification Device shall be provided to connect single supervised conventional initiating contact type device such as water flow switches, tamper switches, single detectors, and other such devices to any of the two-wire intelligent analog loop cards. The Point Identification Device shall mount in a 4-inch square, 2 1/8-inch-deep electrical box and shall be capable of (Class "A") supervised wiring to the initiating device. The Point Identification Device shall contain an integral LED that annunciates module activation. The Point Identification Device shall provide address setting means switches and store an internal identifying code which the control panel shall use to identify the type of device.

K. Addressable Collective Zone Interface

1. The Collective Zone Interface shall be provided to connect supervised conventional initiating device or zone of supervised conventional initiating devices such as water flow switches, tamper switches, detectors, and other such devices to any of the three -wire intelligent analog loop cards. The Collective Zone Interface shall mount in a 4 11/16-inch-square, 3-inch-deep electrical box and shall be capable of (Class "A") supervised wiring to the initiating device(s). The Collective Zone Interface shall contain an integral LED that annunciates module activation. The Collective Zone Interface shall provide address setting means switches and store an internal identifying code which the control panel shall use to identify the type of device.

L. Addressable Control Element

1. The Addressable Control Element shall be provided to connect and supervise, conventional indicating device or zone of indicating devices that required an external power supply, such as horns, strobes to any of the (2) wire intelligent analog loop cards. The Control Element shall be capable of operating as a relay (dry contact form C,) to control door holders, and other such devices. Control Elements shall mount in a 4 11/16-inch-square, 3-inch-deep electrical box and shall be capable of (Class “A”) supervised wiring to the indicating or control device. Control Element shall contain an integral LED that annunciates module activation. Control Element shall provide address setting means switches and store an internal identifying code which control panel shall use to identify the type of device. The addressable Control element shall be capable of providing feedback to the FACP for positive confirmation of the controlled devices activity.

M. Audio/Visual Alarms

1. Provide recessed and surface-mounted approved combination audio/visual alarm devices consisting of an electronic horn for use in an electrically-supervised circuit and a top-mounted integral flashing strobe light. The alarm horn shall have a sound rating of at least 96 decibels at 10 feet. Provide lamps of the flashing stroboscopic type, powered from the control panel alarm circuit. Lamps shall produce a minimum of 75 candela and be designed for A.D.A. compliance. Lamps shall be protected by a polycarbonate lens and shall be labeled FIRE, and are to be mounted at 80 inches above the floor, unless noted otherwise on the drawings.
2. Visual alarms shall operate in unison with audio alarm system.

N. Visual Alarms

1. Provide flush and surface-mounted lamp assembly suitable for use in an electrically-supervised circuit. Provide lamps of the flashing stroboscopic type, powered from the control panel alarm circuit. Lamps shall produce a minimum of 75 candela and be designed for A.D.A. compliance. Lamps shall be protected by a polycarbonate lens and shall be labeled FIRE, and are to be mounted at 80 inches above the floor, unless noted otherwise on the drawings.
2. Visual alarms shall operate in unison with voice alarm system.

O. Electromagnetic Door Hold-Open Devices

1. Attach to the outlet boxes indicated. Device shall operate on power from the fire alarm control panel. Attach compatible magnetic component to the door. Under normal conditions, the magnets shall attract and hold the door open. Upon activation of the building fire alarm system, the devices shall be de-energized, thus releasing the doors on the circuit. Devices shall be designed for wall or floor mounting as required by location shown on drawings, complete with matching door plate, material and finish to match door hardware. Electromagnet operates from a 24 DC source, and requires no more than 0.070 watts to develop 25 lbs. holding force.

P. Fire Alarm Speakers - High Output

1. Speaker shall be a high efficiency, re-entrant type speaker suitable for voice and tone signals. Speaker shall be able to operate continuously without loss of signal for one hour in any ambient temperature environment from 150°F to -30°F. Speaker shall have a die cast housing and be resistant to water, corrosion, vibration and vermin and shall be imperious to damage from pointed objects. Speaker shall produce a sound pressure level of 87 dB measured at rated power (1 watt) ten (10) feet on axis at 1 Khz.
2. Speakers shall be suitable for semi-flush mounting or recessed as shown on plans. All speakers shall be mounted in the ceiling in office areas.

Q. Fire Alarm Speakers - Medium Output

1. Speaker shall be a high efficiency, re-entrant type speaker suitable for voice and tone signals. Speaker shall be able to operate continuously without loss of signal for one hour in any ambient temperature environment from 150°F to -30°F. Speaker shall have a die cast housing and be resistant to water, corrosion, vibration and vermin and shall be impervious to damage from pointed objects. Speaker shall produce a sound pressure level of 87 dB measured at rated power (1 watt) ten (10) feet on axis at 1 Khz. Speakers shall have transformer taps of 2, 1, ½ and ¼ watts RMS audio power rating. Speaker shall be provided with pigtail leads for wiring terminations. Speaker shall be semi-flush mounted on a standard 4 x 4 electrical box with extension ring, or fully recessed as noted on the plans. All speakers in general space shall be medium output.
2. Where speakers are indicated to be installed flush mounted, provide with a white circular metal baffle with perforated holes meeting the Architect's approval.

R. Outdoor Fire Light and Horn

1. Outdoor fire lights and horn suitable for wet locations complete with high intensity flashing light and alarm horn as integral unit.
2. The electrical light source shall be sealed in silicone and protected by a Lexan lens. The word "fire" shall appear on the lens.
3. The minimum sound level shall be 95 dB at ten (10) feet.

S. Firefighters' Two-Way Telephone Communication

1. Dedicated two-way, supervised, telephone voice communication links between fire alarm control panel and remote fire fighters' telephone stations. Supervised telephone lines shall be connected to talk circuits by controls in a control module. The system shall include the following.

    a. Selective-talk type for use by fighters and fire wardens.
    b. Controls to disconnect phones from talk circuits if too many phones are in use simultaneously. An indicator lamp shall flash if a phone is disconnected from the talk circuits.
    c. Selector panel controls to provide simultaneous operation of up to six telephones. Indicate ground faults and opens or shorted telephone lines on the panel front by individual LEDs.
    d. Graphic digital to indicate location of caller.
    e. Remote telephone cabinet shall be flush or surface mounted cabinet, factory standard red finish.

2. Remote telephone jacks shall be single gang, stainless steel plate mounted plug, engraved "Fire Emergency Phone"

3. Portable handsets shall be push-to-talk with noise cancelling microphone, with a 5 ft coiled cord on a telephone plug. Provide six handsets stored in cabinet adjacent to fire alarm control panel in the fire command center.

T. Firefighters' Smoke Control System

1. Comply with sequence of operation as described in Section 28 31 10/23 09 03 "Smoke Management".
2. Fire alarm system shall provide all interfaces and control point required to properly activate smoke management systems.
3. First fire alarm system initiating device to go into alarm condition shall activate the smoke control functions. Subsequent devices going into alarm condition shall have no effect on the smoke control mode.

U. Remote Indicator Lights

1. Remote indicator lights shall be lighted red when the associated device is in alarm. Light shall be mounted in a stainless-steel cover plate with the appropriate legend engraved thereon. Indicators shall be a highly visible red LED.

V. Graphic Annunciator Panel

1. A hard-graphic annunciator shall be provided on each level depicting all fire alarm devices on that entire level and the status condition of each device via a led. Detector locations shall be represented by red LED lamp. Normal system operation shall be indicated by green LED lamp. Trouble and supervisory alarms shall be represented by amber LED.
2. Comply with UL 864.
3. Graphic representation of the facility shall be a CAD drawing and each detector shall be represented by an LED in is actual location. CAD drawing shall be 1/8"-1'-0" scale or larger.

W. Remote Annunciator

1. Annunciator functions shall match those of fire-alarm control unit for alarm, supervisory, and trouble indications. Manual switching functions shall match those of fire-alarm control unit, including acknowledging, silencing, resetting, and testing.
2. Display Type and Functional Performance: Alphanumeric display and LED indicating lights shall match those of fire-alarm control unit. Provide controls to acknowledge, silence, reset, and test functions for alarm, supervisory, and trouble signals.

X. Digital Communicator

1. The Multi-Point Digital Alarm Communicator shall be UL864 listed to provide point identification of alarm, supervisory and trouble events to a Central or Remote Receiving Station. The digital communicator shall support the following:

    a. Ademco Contact ID or SIA protocol
    b. Ademco Contact ID selection shall provide the ability to transmit events for up to 999 individual zones.
    c. SIA selection shall provide the ability to transmit events for up to 10000 individual points.
    d. Programming of accounts and phone numbers.
    e. Cellular connectivity.
    f. Line fault monitoring.

g. Automatic 24-hour test.
h. Supports configurable alarm, alarm restoral, trouble, trouble restoral, supervisory, supervisory restoral and reset events.
i. Supports Ademco Contact ID alarm event codes for general alarm, smoke detector alarm, waterflow alarm, duct alarm and manual alarm events.

Y. Nameplates

1. Major components of equipment shall have the manufacturer's name, address, type or style, model or serial number, catalog number, date of installations, installing Contractor's name and address, and the contract number provided on a new plate permanently affixed to the item or equipment. Major components include, but are not limited to, the following:

a. Fire Alarm Control Panels

1) Furnish to obtain approval by the Engineer/Fire Department before installation. Nameplates shall be etched metal or plastic, permanently attached by screws to panels or adjacent walls.

Z. Wiring

1. Provide Wiring materials under this section as specified in division 26, "Wires and Cables", with the addition and modifications specified herein.

PART 3 - EXECUTION

3.1 INSTALLATION

A. The work includes providing a new fully field programmable/addressable analog interior fire alarm and smoke detection system including associated equipment and appurtenances. Provide each system complete and ready for operation. Equipment, materials, installation, workmanship, inspection, and testing shall be in strict accordance with the required and advisory provisions of NFPA 70, NFPA 72 and NFPA 241, except as modified herein.

B. Provide intelligent, analog addressable type manual pull stations, smoke sensors, thermal sensors, and audio/visual devices, including a stand-alone fire alarm control panel as located on the drawings and required by the fire department.

C. Provide additional voice alarm speakers where sound level is not above 15dB above ambient noise level.

D. Pre-inspection - examine areas and conditions under which work of this section is to be performed. Do not proceed with work until unsatisfactory conditions have been corrected.

3.2 INSTALLATION CRITERIA

A. All fire alarm wiring shall be in conduit. All alarm and signal wiring shall be in accordance with the manufacturer's recommendations and installed in an approved raceway specified in Section 26 05 33. Plenum rated cable is acceptable in concealed accessible areas where installed in open cable tray systems or J-hooks.

B. Wiring integrity and survivability requirements shall be specified on shop drawings per NFPA 72, Chapter 12.

C. The contractors shall fully coordinate with all other trades for the proper wiring and control of all systems.

D. Wiring in the Fire Command Center may utilize surface-mounted wireways. Sizes and locations of such wireway shall be indicated on the shop drawings.

E. All wiring shall be identified at the Fire Command Center and at each terminal and junction box.

F. VCS speakers shall be wired in parallel.

G. Control panel, annunciators, standby power module must be mounted with sufficient clearance for observation and testing. Fasten equipment to structural members of building or metal supports attached to structure. Final arrangement and location must be approved by the Architect/Engineer and Fire Department

H. Flexible connectors are to be used for all devices mounted in suspended lay-in ceiling panels. All conduit, mounting boxes, junction boxes and panels are to be securely hung and fastened with appropriate fittings to insure positive grounding throughout the entire system. No wiring other than that directly associated with fire alarm detection, alarm or auxiliary functions will be permitted in fire alarm raceways.

I. Conductors in cabinets must be carefully formed and harnessed so that each drops off directly opposite to its terminal. Cabinet terminals must be numbered and coded.

J. Wiring splices are to be avoided to the extent possible, and, if need, they must be made using solderless connectors and only in junction boxes which are to be painted fire-alarm red.

K. Color codes must be used throughout. Transposing or changing color coding of wire will not be permitted. Wire nut-type connections are not acceptable. All conductors in conduit pull boxes or cabinets containing more than one wire must be labeled on each end with “E-Z Markers” or equivalent.

L. Provide all necessary emergency power to the complete Fire Alarm System in accordance with the manufacturer’s requirements.

3.3 PAINTING

A. Paint exposed electrical, fire alarm conduit and surface metal raceway to match adjacent finishes in exposed areas. Paint conduit and surface metal raceways red in unfinished areas and above finished ceilings.

3.4 FIELD QUALITY CONTROL

A. Preliminary Tests

1. Conduct the following tests during installation of wiring and system components. Correct any deficiencies pertaining to these requirements prior to formal functional and operational tests of the system.

2. Ground Resistance

    a. Measure the resistance of each connection to ground. Ground resistance shall not exceed 10 ohms.

3. Dielectric Strength and Insulation Resistance

    a. Test dielectric strength and the insulation resistance of system interconnecting wiring by means of an instrument capable of generating 500-Volts D.C. and equipped to indicate leakage current in 1000 mega-ohms. For the purpose of this test, instrument shall be connected between each conductor on the line and between each conductor and ground at control panel and of line, with the other extremity open circuited and series-connected devices shunted or in place. System shall withstand test without breakdown and indicate a resistance of not less than 500,000 ohms, the measurement being taken after an electrification of not more than 1.0 minute with a dc potential of not less than 100-Volts nor more than 550-Volts. Dielectric tests shall be witnessed by Engineer or their designee.

4. Smoke and Thermal Sensor Tests

    a. Prior to formal inspection and tests, clean and perform sensitivity tests on each smoke and thermal sensor. Clean the smoke and thermal sensors in accordance with the manufacturer's recommended procedures. Perform voltage activation sensitivity test on each sensor and record the results. Remove sensors with a sensitivity level above or below the UL accepted sensitivity range for that sensor and replace with new sensors. Present recorded data at the formal inspection for verification. Approved copies shall become part of the operations and maintenance manual for the fire alarm system.

5. Field Inspection and Test

    a. Before final acceptance of the work, test each system to demonstrate compliance with the contract requirement. Each system shall be subjected, at minimum, to complete functional and operational tests including tests in place of each smoke sensor and detector, each thermal sensor, each manual station and visual and audio/visual device, tests of wiring supervision and tests of control panel functions. Preliminary tests shall be performed in accordance with manufacturer's published testing instructions and in accordance with NFPA 72. Furnish one extra Operations and Maintenance Manual with the formal request for final acceptance testing. The system shall be operational, with no trouble or alarm conditions, a minimum of 14 consecutive days prior to formal tests. Printer shall be operational during the preliminary tests and break-in period. Provide printer records with the request for formal inspection as evidence of completion of required preliminary test.

6. Formal Inspection and Test

    a. The Authority Having Jurisdiction will witness formal tests after receipt of written certification that preliminary tests have been completed and that the system is ready for final inspection. The system manufacturer's technical representative shall be present for the inspection and test. At minimum, preliminary tests shall be repeated and functional and operation tests conducted, as requested by the Architect/Engineer. Correct defects and conduct additional tests to demonstrate that the system conforms to contract specifications. Contractor shall provide two-way radios, personnel, ladders, scaffold and test equipment required for conducting tests. Smoke detectors shall be tested using the manufacturer's calibrated test method. In addition, formal testing will require real smoke to be used to test smoke detectors. Canned smoke will not be permitted.

7. Manufacturer's Field Service

    a. Manufacturer's Representative

        1) Furnish the services of a factory-trained fire alarm system manufacturer's representative or technician, experienced in the installation and operation of the type of system being provided, to supervise the installation, testing, including formal testing, adjustment of the system, and instruction to the facility personnel. Furnish names and phone numbers of the factory-trained fire alarm system representatives or technicians.

B. Training

1. Equipment manufacturer shall provide 40 hours on site technical training to the owner or its representative (for two persons designated by Owner). Training shall allow for individual hands on programming, troubleshooting and diagnostics exercises. Training shall occur within 2 months of system acceptance.

C. Adjustments

1. Equipment manufacturer shall provide necessary subsequent custom reprogramming to modify and adjust operations and individual identification nomenclature to the owner satisfaction four months after final system acceptance and twelve months after system acceptance. Reprogramming is to be done at the job site and witnessed by the Authority Having Jurisdiction representative. Revision of as-built and record drawings shall be by the installing Contractor.

END OF SECTION

This page is intentionally left blank.

SECTION 28 46 10 - SMOKE MANAGEMENT 23 09 03 AND 28 46 10

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplemental Conditions of the Construction Contract and Division 1 Specification Sections, apply to this Section.

1.2 SUBMITTALS

A. PRELIMINARY SUBMITTAL: Prospective smoke management contractors shall submit for review by the Owner's authorized representatives a preliminary written description of his proposed smoke management systems, including block diagrams showing all major components and panels and other processing devices and required cabling between each.

1. Include manufacturer's literature for each type of panel, controller or device that may be shown on the block Diagram.
2. Block Diagram shall show, schematically, the entire building system with all major components identified.
3. Include information about proposed communications buss and data transmission, including UL listings.
4. Provide a written explanation of any characteristics, items of equipment or control intent, which differs from the requirements of this Division. Explain what, if any, alternative characteristics, items of equipment or control intent will be provided.
5. Alternate systems, characteristics, items of equipment or control intent, which do not comply with these specifications, may be rejected if not acceptable to the Engineer. Any rejected alternate system, characteristics, items of equipment or control intent shall be replaced by the specified system, characteristics, items of equipment or control intent at no extra cost to the project.

B. The following data/information shall be submitted for approval:

1. FSCS and all associated components, including panel layout.
2. Complete sequence of operation including detailed matrix.
3. Smoke control dampers, including parallel BMS and smoke control interface requirements.
4. Air piping.
5. Communications wiring including survivability and supervisory requirements.
6. Smoke control system Cad generated drawings including all pertinent data to provide a functional operating system.
7. Smoke control damper schedules showing size, configuration, capacity and location of all equipment.
8. Data sheets for all hardware and software control components.
9. A description of the installation materials including conduit, wire, flex, etc.
10. Smoke control system panel locations.

C. The smoke management contractor shall provide submitted drawings for the entire control system for review and approval before work shall begin. Included in the submittal drawings shall be a diagram depicting the system architecture complete with a communications riser. Drawings shall include point-to-point wiring diagrams and must show all controls, start-stop arrangement for each piece of equipment, equipment interlocks, wiring terminal numbers and any special connection information required for properly controlling the mechanical equipment. The submittal shall include a bill of material reference list as well as equipment sequences of operation.

D. The submittals shall include a specification compliance analysis for review and approval before work shall begin. The compliance document shall address each paragraph of this specification by indicating COMPLY, EXCEED, or EXCEPTION. Do not indicate COMPLY unless the proposed system exactly meets the paragraph requirement. If EXCEED or EXCEPTION is indicated, then provide a clear and concise explanation of the variance from the specifications and the net effect this would have on the specified system performance.

E. Wiring diagrams shall include internal wiring of all electrical control devices.

F. Submit completed computer graphics for all the equipment and building floor plans showing respective smoke control zones prior to scheduled completion of the project for approval.

1.3 STANDARDS

A. Materials shall comply with the following standards.

1. NFPA 92 (2015 Edition)
2. NFPA 70 National Electrical Code
3. NFPA 72 National Fire Alarm Code
4. NFPA 101 Life Safety Code
5. Local Code Requirements and Amendments
6. Life Safety Report as prepared by Life Safety Report by Code Consultant
7. UL 555 Standard for Safety Fire Dampers
8. UL 555S Standard for Safety Leakage Rated Dampers for Use in Smoke Control Systems
9. UL 864/UUKL

1.4 RELATED WORK

A. Section 21 13 00 – Fire Suppression Sprinkler Systems

B. Section 23 34 00 – Fans

C. Section 23 33 00 – Ductwork Accessories

D. Section 23 09 00 – Building Automation and Automatic Temperature Control Systems.

E. Section 23 05 93 – Test Adjust and Balance

F. Section 28 46 00 – Addressable Fire Alarm System

PART 2 - PRODUCTS

2.1 DESCRIPTION OF SYSTEM(S)

A. Provide a fully functioning Smoke Management System. This system shall be fully coordinated with other life-safety within the building.

B. System shall include the use of both passive (architectural) and mechanical means to remove and prevent the movement of smoke. Mechanical methods include the following:

1. Stairwell pressurization**.**
2. Zoned smoke exhaust systems.

C. The intent of the Smoke Management System is to prevent the flow of smoke into egress areas of the building, and provide a tenable environment in the areas protected for a period of time sufficient to evacuate the building. It should be noted that smoke would exist in these areas.

D. All components of the Smoke Management System shall be able to operate during a fire event for not less than 20 minutes.

2.2 FIRE FIGHTERS' SMOKE CONTROL STATION (FSCS)

A. A Fire Fighters' Smoke Control Station (FSCS) shall be provided for full monitoring and manual override and control of all devices associated with the Smoke Management System. The FSCS and all control components shall be UUKL listed.

B. The FSCS shall have the highest priority of control over all other operational states, including automatic activation of the Smoke Management System. The FSCS shall bypass all other building automation functions and local "hard-wired" controls such as Hand-Off-Auto switches, high-limit status pressure switches, freeze stats and smoke detectors.

C. The FSCS shall not bypass controls intended to provide for electrical overloads, personal safety when servicing equipment or prevent system damage.

D. The FSCS shall not bypass duct-mounted smoke detectors on supply air systems that are not part of the Smoke Management System.

E. The FSCS shall include a graphic representation of the building, the smoke zones and the Smoke Management System. Fans, dampers, ductwork and other devices shall be clearly indicated on the FSCS along with direction of airflow.

F. The status of each component shall be indicated by a pilot light according to the following legend:

1.	GREEN	-	Devices in their ON or OPEN state.
2.	WHITE	-	Devices in their NORMAL or OPERATING state.
3.	YELLOW	-	Devices in their TROUBLE or FAULT state.
4.	RED	-	Devices in their OFF or CLOSED state.

G. The FSCS shall include switches for all devices associated with the Smoke Management System as follows:

1. ON-AUTO-OFF
   Control over each device that can be controlled from other locations or systems.

2. OPEN-AUTO-CLOSED
   Control over each damper that can be controlled from other locations or systems.

3. ON-OFF or OPEN-CLOSED
   Control over each device that is solely intended for use in the Smoke Management System.

H. When a switch is in the AUTO position, other automatic or manual devices shall be allowed to control the Smoke Management device, however once a control function is issued from the FSCS, no other system or device within the building shall countermand this action.

I. When a switch is in the AUTO position, the device's status shall be indicated (ON, OFF, OPEN, CLOSED) as noted above.

J. VAV terminal units that are all located within and serve only one Smoke Management zone may be controlled collectively.

K. A push-to test switch shall be provided to test all pilot lights.

L. The FSCS shall be labeled in plain English having a font equivalent to 12-point Helvetica bold.

M. A full-scale color drawing of the FSCS shall be submitted to the Engineer and the local Authority Having Jurisdiction for review and approval.

2.3 ACTIVATION

A. The Smoke Management System shall be automatically activated by a signal from any of the following devices within the appropriate smoke zone:

1. Sprinkler waterflow in zone.

   a. Sprinkler zones must match smoke zones

2. Fire department manual controls.
3. Beam detector.
4. Area smoke detectors.
5. Heat detectors.

B. The Smoke Management System shall also be manually activated and deactivated from the FSCS.

C. Response Times:

1. The Smoke Management System shall be activated immediately upon receipt of initiation signal (manual or automatic).

a. Devices within the system shall be activated and report the desired state or operational mode to the FSCS within the following timeline:

1)	Damper closing (start)	15 Seconds
2)	Damper opening (start)	15 Seconds
3)	Completion of damper travel	60 Seconds
4)	Fan energizing (start)	15 Seconds
5)	Fan de-energizing (start)	Immediately
6)	Fan volume modulation	30 Seconds
7)	Fan at desired state	75 Seconds
8)	Pressure control modulation	15 Seconds
9)	Temperature control override	Immediately
10)	Positive indication of status	15 Seconds

11) Total response time from detection to full equipment operation shall be no more than 110 seconds.

b. Response times indicated above shall be the same whether the system has been activated manually from the FSCS or automatically from any initiation device.
c. Components shall be sequenced as necessary to avoid physical damage to components and the system.

2.4 EQUIPMENT

A. All devices associated with the Smoke Management System shall be UL listed for their application.

B. Where applicable, all devices associated with the Smoke Management System shall be designed to withstand temperatures of 250 °F.

C. Dampers:

1. All dampers used in engineered Smoke Management Systems shall be UL listed in accordance with UL 555 Standard for Safety Fire Dampers and UL 555S Standard for Safety Leakage Rated Dampers for use in Smoke Control Systems.
2. Dampers shall be minimum Class II, rated for 250°F.

D. Fans:

1. Where applicable, fans shall be designed and certified by the manufacturer to withstand temperatures of 250 °F.
2. All fans used in conjunction with the Smoke Management System shall be equipped with 1.5 times (minimum of two) the number of belts required for operation.
3. Fan motors shall have a minimum service factor of 1.15.
4. Fans shall be supported in accordance with the building code, from non-combustible components.
5. Where fans are utilized for stair pressurization, they shall be enclosed in a 2-hour rated field assembled enclosure including (2) 12”x12” fire dampered openings for ventilation. All enclosure supports and associated power and control wiring shall be protected by a 2-hour rated system.

E. Ductwork: Ductwork shall be constructed and supported in accordance with the Mechanical Code. Ductwork shall be constructed to withstand temperatures of 250°F. Where shafts are used for pressurization or smoke evacuation, they shall be constructed to a minimum rating of +/- 25 lbs./sf or as indicated on structural documents.

F. Air Piping Used as Part of Smoke Control Systems: Hard copper tubing, Type L, wrought, copper or brass fittings installed per IBC Section 909.

2.5 ELECTRICAL POWER

A. All electrical installations shall comply with NFPA 70 National Electrical Code

B. All devices associated with the Smoke Management System requiring electrical power shall be provided with both normal and stand-by power. Transfer to stand-by power shall be automatic and occur within 10 seconds upon loss of normal power.

C. Devices associated with the Smoke Management System relying upon volatile memory shall be provided with an uninterruptible power source able to provide 15 minutes of power.

D. All power wiring shall be installed in conduit. In addition, power wiring serving smokeproof enclosure ventilation systems (such as stair or elevator pressurization systems) shall utilize a 2-hour rated cable or cable system.

E. Variable frequency drives serving smokeproof enclosure ventilation systems shall be provided with 2-hour rated enclosures with 24”x24” fire dampered opening when located indoors. All power wiring associated with such VFDs shall utilize a 2-hour rated cable or cable system per above.

2.6 CONTROLS

A. Wiring: In addition to meeting requirements of the electrical code, all wiring regardless of voltage, in conjunction with the Smoke Management System shall be installed in conduit.

B. Survivability: When wiring connecting the FSCS to any remote mounted controlling device exceeds 100 feet; the wire shall be installed within a 2-hour rated enclosure in addition to conduit. In addition, control wiring serving smokeproof enclosure ventilation systems (such as stair or elevator pressurization systems) shall utilize a 2-hour rated cable or cable system.

C. Supervision

1. Provide supervision of all components in association with the Smoke Management System. Supervision shall include positive confirmation of:

    a. Equipment operation (automatic activation, testing or manual over-ride).
    b. Presence of power down-stream of last point of disconnect for all dampers, fans and doors.
    c. Fans: Provide proof of airflow through the use of differential pressure sensors.
    d. Dampers and Makeup Air Doors: Provide proof of full open and full closed status through the use of end switches.

2. Supervision of devices shall be indicated at the FSCS.

PART 3 - EXECUTION

3.1 INDEPENDENT INSPECTOR

A. The Smoke Management System testing shall be carried out by an independent third-party Special Inspection Agency. Independent Inspector shall be a Consultant to the General Contractor.

B. The Special inspector shall be a licensed register mechanical engineer in the State of Maryland and shall be approved by the Authority Having Jurisdiction for the Smoke Management and Life Safety System.

3.2 TESTING

A. General: All components of the Smoke Management System shall be individually tested. Testing methodology shall include the following subsets:

1. Capacity test.(air volume and static pressure)
2. Functionality test.(equipment operates properly)
3. Sequence test.(equipment energizes as called for)

B. All devices shall be tested to demonstrate the correct operating sequence and output reporting under the following modes:

1. Normal power mode.
2. Stand-by power mode.
3. Manual over-ride.

C. Detection Devices:

1. All detection devices that are associated with the Smoke Management System shall be individually tested.
2. The Smoke Management System shall be tested by activating one representative detection device of each within a zone. For example, if a smoke zone is equipped with smoke detectors and water flow switches, only one smoke detector and one water flow switch need be activated within this zone.

D. Provide test report including the following data:

1. Date and time of tests.
2. Test participants, including local Code Authorities, representatives from the Design Team and the Construction Team.
3. Wind speed, wind direction and outside ambient air temperature.
4. Actual response times required for system operation.
5. Verification of correct operating sequences.
6. Fans:

    a. Examine fans for correct rotation.
    b. Record airflows.
    c. Reference Section 23 05 93 – Test Adjust and Balance for testing procedures.
    d. Provide manufacturer’s fan curve(s) and certification detailing compliance with exposure to elevated temperatures as noted above.

7. Ductwork (Including Shafts Utilized for Smoke Evacuation):

    a. All ductwork shall be leak tested to 1.5 times the maximum design pressure. Leakage shall not exceed 5% of design flow.
    b. Reference Section 23 05 93 – Test Adjust and Balance for testing procedures.

8. Inlets and outlets:

    a. Record airflow at all inlets and outlets.
    b. Reference Section 23 05 93 – Test Adjust and Balance for testing procedures.

9. Dampers: Each damper shall be tested to verify functionality.
10. Pressurization: Measure pressure differential between floors and between stairwell, vestibule and corridor(s). Measure door opening force at enclosed stairway doors.

3.3 SEQUENCE OF OPERATIONS

A. The Smoke Management System shall accomplish the following sequence reference plans of operation when activated:

END OF SECTION

SECTION 28 50 10 - AREA OF RESCUE ASSISTANCE SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

A. Furnish, install, and wire all equipment associated with the installation of a digital Area of Rescue Assistance System designed for IBC, NFPA -72 and ADA (Americans with Disabilities Act) requirements. This work shall include, but not limited to, a main control panel, remote control panels, remote call stations, power supply(s), outlet boxes, cables and wiring as shown on the drawings and as specified herein.

B. The Area of Rescue Assistance System shall include remote dialing that will automatically call an approved off-site monitoring company in the event there is no answer at the main control panel.

1.2 SUBMITTALS

A. General: Data sheets on all equipment being provided as well as recommended cable types. Internal control cabinet drawings showing internal block diagram connections shall be provided. Wiring diagrams showing typical field wiring connections as well as single line floor plan indicating equipment locations as well as cable routings and quantities.

B. Product Data: Submit product data, including manufacturer's product sheet, for specified products, including main control panel, call stations and cabling.

C. Shop Drawings: Submit shop drawings showing layout, profiles, and product components, including anchorage and accessories. Include cabling diagrams, wiring diagrams, station installation details, and equipment cabinet details.

D. Quality Assurance Submittals: Submit the following:

1. Test Reports: Certified test reports showing compliance with specified performance characteristics.
2. Manufacturer's Instructions: Manufacturer's installation instructions.
3. Manufacturer's Field Reports: Manufacturer's field reports specified herein.

E. Closeout Submittals: Submit the following:

1. Operation and Maintenance Data: Operation and maintenance data for installed products in accordance with Division 1 Closeout Submittals (Maintenance Data and Operation Data) Section.
2. Warranty: Warranty documents specified herein.

F. Project Closeout

1. A one-year maintenance contract offering continued factory authorized service of this system shall be provided as part of this contract.

2. The contractor shall furnish manufacturer's manuals of the completed system including individual specifications sheets, schematics, inter-panel and intra-panel wiring diagrams.

    a. All information necessary for the proper maintenance and operation of the system must be included.

3. As built drawings that include changes to wiring, wiring designations, junction box labeling, and other pertinent information shall be supplied upon completion of the project.
4. Provide a minimum of four (4) hours of in-service training with the system.

    a. These sessions shall be broken into segments that will facilitate the training of the system users in operating station equipment.
    b. Operating manuals and user's guides shall be provided at the time of training.

1.3 WARRANTY

A. Project Warranty: Refer to Conditions of the Contract for project warranty provisions.

B. Manufacturer's Warranty: Submit, for Owner's acceptance, manufacturer's standard warranty document executed by authorized company official. Manufacturer's warranty is in addition to, and not a limitation of, other rights Owner may have under Contract Documents.

1. Warranty Period: Minimum three (3) years commencing on the Date of Substantial Completion.
2. All materials and installation shall be guaranteed to be free of defects in material and workmanship for one year after final acceptance of installation and tests.

1.4 INSTALLATION STANDARDS

A. The system shall be installed in accordance with the IBC and ADA (Americans with Disabilities Act) requirements.

B. The completed system shall be in compliance with state and local electrical codes.

C. All wiring shall test free from grounds and shorts.

D. Install according to the manufacturer's wiring diagrams.

E. The Area of Rescue Assistance System requires installation by factory trained authorized dealers/distributors, in accordance with ANSI/NFPA 70 National Electrical Code and NFPA 72 Fire Alarm Code.

F. Properly trained personnel, familiar with Telecommunications Industry Associations 568 TIA/EIA standard, are required for proper installation. Failure to terminate the wiring correctly will cause damage to the system and void the warranty.

G. The Area of Rescue Assistance System shall be installed in a controlled, indoor dry environment, with temperatures maintained between 55°F and 95°F.

1.5 SYSTEM OPERATIONS

A. Furnish, install, and place into operation a Rescue Assistance System as indicated on the drawings and as specified herein.

B. A common control panel shall be provided at the building fire command center as authorized by local authority or the fire department where shown on the drawings to indicate light and tone signals from multiple remote call stations and allow voice communication. A secondary panel shall be installed at the main security office for response.

1. When the system is operational, a LED signals power on.
2. When the remote call station switch is activated, a one shot tone is made at the call station and a LED is lit that is steady. The call is displayed digitally on the control panel(s) with a tone along with a display of the call and its location on a 40-character LCD four line display.
3. When the alarm signal is answered by the control panel, the remote call station is signaled by the LED flashing that voice communication is initiated.
4. Voice communication with the remote call station can then be initiated from the control panel via a handset.
5. External modem connection to a public telephone system shall be provided after a programmable time delay.
6. The system shall supervise all the call stations, control panels and field switches on a continuous basis to identify line faults and defective equipment. Faults will be alerted and displayed at the control panel(s).

PART 2 - PRODUCTS

2.1 RESCUE ASSISTANCE-SYSTEM MANUFACTURER

A. Basis of Design: Rath, Inc.

B. Or approved equal. Equal to match Rath part numbers listed in this specification.

2.2 RESCUE ASSISTANCE SYSTEM AND COMPONENTS

A. Equipment

1. This system shall consist of multiple remote call stations, which will communicate with the main control panel and remote control panels as needed for a complete and operational system. The control panel(s) shall have access to a public telephone system for external alarm notification and two-way voice communication.
2. The system shall include a minimum of one control panel with the capacity to connect up to 255 call stations. Additional control panels shall be networked if additional call stations are required. In any given system there will be at least one Control Panel and between one and 255 Call Stations.
3. System wiring shall be provided per manufacturers requirements.
4. Provide signage as required by code.

B. Control Panel(s)

1. The Command Center (2500 series) shall include both the Base Station and Distribution Module. The Base Station must have a powder coated steel housing (surface or flush mount) or be desk mounted, include a black handset with coil cord and be powered from the Distribution Module.
2. The Command Center must include visual indicators to allow Rescue personnel to know which remote call station needs assistance. The Command Center must allow Rescue personnel to speak to each remote call station individual. The Command Center must include both a handset and speakerphone to communicate back to the remote call stations.
3. Distribution Module must be a surface mount enclosure, include connections for the Call Boxes and power both the Base Station and 2400 series remote call stations. The Distribution Module shall be powered from 120vac power with a battery backup that provides power for a minimum of 4 hours (Rath part # RP7700104 for 12-36 Zone or RP7700105 for 56-Up Zone).
4. The Command Center must provide an audible and visual indicator that a Remote call station has been activated.
5. The 120vac Power Supply Rath part # RP7700104 (12-36 Zone) or RP7700105 (56-Up Zone) must be capable of supplying power to the Distribution Module.
6. The power supply shall be connected to a dedicated 120V, 20A **emergency** circuit and shall include integral emergency battery backup.
7. The internal modem shall be provided to call to a designated location via a dedicated public telephone line to notify them of the alarm after a user programmed delay to allow for local response.
8. Command Center must include wording identifying the location of each Remote call station and light an LED when a particular Call Box has been activated.

C. Remote Call Station Boxes

1. The remote call station shall include a momentary switch, microphone, and loudspeaker.
2. The station shall have hands free voice communication with the control panel.
3. The station shall have silk-screened operating instructions.
4. The remote call station shall be Vandal Resistant. The standard two gang mounting plate can be flush or surface mounted and incorporates heavy-duty switches and speakers along with stainless-steel plates.
5. The station shall be an ADA compliant and vandal resistant speakerphone.
6. The station must be capable of being programmed and re-programmed on-site.
7. Provide protective covers as required on the Call Boxes per local municipal codes, use Rath 2400-XXXSSPC2.

D. Communication Sequence

1. The remote call station shall be hands-free and be a push-button-once to talk system. Once the button has been pushed, the remote call station will call the Base Station. If no answers at the Base Station, it will automatically call a pre-programmed emergency number. The remote call station must be capable of being programmed with up to 2 emergency numbers (either both off-site or Base Station and one off-site).
2. The remote call station shall have location message capability. Remote call station must have a minimum 18 second recordable message capability, programmable to play 1 or 2 times. Remote call station shall notify called party of the location of the call upon being received at the emergency dispatch center.
3. The remote call station shall be capable of allowing the called party to replay the location message, if necessary, to ensure an understanding of the caller location.

4. If system is not attended to 24 hours a day, the control panel must dial a secondary location outside the building to activate two-way off-site person to person voice communications.
5. Once a call has been made (button pushed), the call can only be terminated by the called party.
6. The station must have a red LED that will light up upon push of the button. The light shall be a solid color when the remote call station is activated, and will flash when call has been answered.

PART 3 - EXECUTION

3.1 MANUFACTURER'S INSTRUCTIONS

A. Compliance: Comply with manufacturer's product data, including product technical bulletins, product catalog installation instructions, and product carton instructions for installation.

3.2 EXAMINATION

A. Site Verification of Conditions: Verify substrate conditions, which have been previously installed under other sections, are acceptable for product installation in accordance with manufacturer's instructions.

3.3 INSTALLATION

A. Command Center

1. The Command Center is to be located at a central control point on the first floor or as determined by local Authority having jurisdiction.
2. The Command Center and remote call stations (2400 series) are to be powered by the Distribution Module.
3. Distribution Module shall be powered by the Rath part # RP7700104 or RP7700105 Power Supply. It shall require a dedicated 120 VAC power and provide battery backup capable of providing a minimum of 4 hours of electrical backup in case of building power failure.
4. The Base Station shall connect to the Distribution Module with single wire pair (12-16 zone), two wire pairs (28-56 zone) and three wire pairs (76-up zone).

B. Remote Call Stations

1. Provide remote call station in each elevator lobby that is above or below the exit discharge level.
2. Provide remote call station every 5th floor in each stairway.
3. The remote call stations must allow the programming of a specific location message of the unit. This allows rescue personnel to know the location of the activated Call Box.
4. The remote call stations are to be located no higher than 48” front reach, or 54” side reach to the center of the button above ground level to ensure conformance with the ADA requirements.
5. The remote call stations are to be flush mounted.

C. Cabling Requirements

1. Wiring from the control panel to secondary control panels, field switches and the call stations shall be per manufacturer's requirements.
2. Each Remote call station shall connect to the Distribution Module with a single wire pair. Wire pairs shall be shielded if near any power runs, otherwise standard pair is acceptable. Wiring shall be Rath Custom Communication Cable (part # RP7500094). If CI 2-hour fire-rated cable is required, use Rath Communication Cable (part # RP6600300M). For a UL Listed option use part # RPP66010002.
3. Provide monitoring of the system integrity as required per NFPA 72, use Rath Supervisor Board 2500-XXSPVSR.
4. Cabling for two-way communication system shall meet the applicable requirements for pathway survivability. Cabling installation shall consist of one or more of the following:

    a. 2-hour fire-rated circuit integrity (CI) cable
    b. 2-hour fire-rated cable system

D. Rescue Assistance Signal System - Audio/Visual Installation

1. Complete system shall be installed in strict accordance with manufacturer's recommendations.
2. Wiring shall be installed in raceways throughout the building, minimum ¾" conduit.

E. Rescue Assistance System Signage

1. System shall consist of a minimum of one 120/277 VAC edge light sign (part # 7050 or 7050E), a "location" and "instruction" sign (part # 7049) to clearly indicate location of designated area.
2. A tactile sign (part # 7043/7044 or 7087) with raised letter and Braille shall be located at entrance to area.
3. Command Center must include wording identifying the location of each Remote call station and light an LED when a particular remote call station has been activated.
4. The Remote call station wording must include "Emergency Phone", International Phone Symbol and raised Braille lettering.

3.4 FIELD QUALITY REQUIREMENTS

A. Site Tests (Post Installation Testing): Checkout final connections to the system shall be made by a factory technician authorized by the manufacturer of the products installed.

1. Factory authorized technicians shall demonstrate operation of the complete system and each major component to the staff.
2. System field wiring diagrams shall be provided to the subcontractor by the manufacturer prior to installation.

B. Inspection: Perform a complete functional test of the system upon completion of the installation and instruct the staff in the operation and maintenance of the system.

3.5 CLEANING

A. Cleaning: Repair or replace damaged installed products. Remove construction debris from project site and legally dispose of debris.

END OF SECTION

This page is intentionally left blank.

SECTION 28 50 20 - EMERGENCY RESPONDER RADIO SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

A. Per IFC section 510, all new buildings shall have approved radio coverage for emergency responders within the building based upon the existing coverage levels of the public safety communications systems of the jurisdiction at the exterior of the building, with the following exceptions:

1. Where approved by the building official and the fire code official, a wired communication system may be permitted in lieu of an approved radio coverage system.
2. Where it is determined by the fire code official that the ERRS is not needed.
3. In facilities where the ERRS is required but the systems components could have a negative impact on the normal facility operations, the fire code official shall have the authority to accept an automatically activated ERRS.

B. Contractor shall provide turnkey Emergency Responder Radio System (ERRS) to provide coverage for emergency responder 2-way radio signals within the entire building, compliant with all adopted codes including, but not be limited to IBC-916, IFC-510 and NFPA-72. Note, this system may also be referenced as Emergency / First Responder DAS or Public Safety DAS.

C. Any reference to “DAS” within this specification section is for ERRS only. Cellular DAS (where applicable) is covered in another scope of work.

D. Provide RF site survey to establish benchmark signal level. Coordinate timing of site survey with Owner and General Contractor.

E. The following frequencies shall be supported and enhanced consistent with the results of the site survey and input from the local AHJ to confirm required frequencies. For pricing purposes, coverage for 700-800 MHz frequencies shall be considered the base / minimum requirement with alternate costs for adding 150 MHz and 450 MHz frequencies, where required.

1. 700 MHz
2. 800 MHz
3. VHF / 150 MHz
4. UHF / 450 MHz

F. Coverage and signal strength shall be provided per International Fire Code section 510, including requirements for radio signal strength, secondary power, installation and testing procedures.

G. The following design and installation scope is to be provided by the selected ERRS Contractor / Integrator, including but not limited to:

1. Donor antennas
2. Active DAS components (bi-directional amplifiers, head-end, remote units, etc.)
3. Passive DAS components (cabling, splitters, couplers, antennas, etc.)
4. Power supplies and 24 hours UPS battery back-up (to support active equipment)
5. Power circuits / outlets fed from base building electrical panels
6. Raceway (conduits, sleeves, j-hooks, etc.)

7. Penetrations (roof, floor, walls) and appropriate fireproofing and/or weather seals
8. Fire-wrap to satisfy 2-hour pathway survivability for riser coax (as necessary)
9. Fire alarm monitoring interface for 24/7 monitoring of system.

1.2 GENERAL REQUIREMENTS

A. The term “provide” used throughout this specification and drawings shall mean “furnish, install, test, and certify”.

B. Contractor shall fully coordinate with Authority Having Jurisdiction (AHJ) including all necessary system requirements, frequency allocations reviews and approvals with Building Department, Fire Department, Police Department, and/or other departments for determining system acceptance.

C. Contractor shall coordinate project schedule, installation schedule, phasing and any other requirements deemed necessary with Owner, CM, and all necessary Trades to ensure successful completion of work.

D. Contractor shall confirm if Union labor is required and include costs as applicable.

E. Contractor shall design, furnish, install, and configure turnkey DAS passive and active equipment, system management and monitoring software. Work shall include all necessary DAS system components and installation thereof required including raceway, penetrations (roof, floor, walls), fireproofing, weather-sealing, conduit 2-hour fire-wrapping (riser locations), cable, cable terminals, transceivers/media converters, amplifiers, equipment, power supplies, battery back-up, AC power circuits, fire alarm monitoring, drywall repair, etc. for a fully operational and functional DAS.

F. The DAS design shall be (virtually) developed, modeled and optimized using wireless computer software such as iBwave for establishing antenna locations based on electronic architectural drawings and various wireless frequency bands. Construction materials shall be inputted into the software program for structure, walls, floors, and ceilings.

G. The DAS wireless coverage and signal strength shall be field tested and verified, certified, and guaranteed upon installation, compliant with IFC-510 testing requirements.

H. The Contractor shall coordinate support systems requirements directly required by the DAS such as architectural, HVAC, electrical, and technology systems.

I. The installation of the DAS system shall comply with all local building codes, and applicable rules and regulations of the AHJ, FCC, BICSI, EIA, IEEE, NEC, TIA, UL, IFC, NFPA and other industry standards, codes, and methods.

J. All cabling shall comply with NFPA-72 pathway survivability requirements as adopted by the local AHJ. Specifically, Contractor shall confirm if AHJ considers building fully sprinkled and if there are any exceptions to the level-1 pathway survivability requirement. (Note: to comply with level-1 pathway survivability, all cabling shall be routed in metallic conduit, thus use of j-hooks or routing cable in cable tray is not allowed, unless specifically approved by the AHJ.)

K. All riser coax cables shall be routed within 2-hour rated enclosure to comply with NFPA-72 pathway survivability. Contractor shall confirm if Telecom and Electrical riser rooms are 2-hr rated or not. If riser rooms are not 2-hour rated spaces, all riser coax shall be installed in conduit that is wrapped with multiple layers of 3M (or equivalent manufacturer) fire wrap, as directed per manufacturer requirements. Additionally, splitters that tap off of riser coax shall be installed in pull-box that is also wrapped with fire wrap.

L. Plenum rated cable is required for all horizontal cable runs.

M. DAS head-end equipment and remote units shall be installed in NEMA-4X enclosures

1.3 SUBMITTALS

A. Product Data: The DAS Product Data Submittal shall be submitted for review and approval by AHJ prior to starting any work. Copies shall be provided to ME Engineers for reference only. Information shall include detailed parts list for all components and manufacturer's product data for each component to be installed.

B. Virtual Wireless Model: After project award, provide plan drawings based on architectural background or model indicating device and antenna placement based on wireless modeling computer software. Construction materials shall be inputted into the software program for structure, walls, floors, and ceilings as well as radio frequencies, zones, and capacity to help predict coverage and placement of antennas and associated coverage patterns. Information submitted shall include coverage drawing (heat map) as well as placement of antennas, equipment, cable and conduit routing, reflected ceiling plan layer, etc. Models shall be developed using iBwave or equivalent industry recognized software. Drawings shall be submitted for review and approval by AHJ prior to starting any work. Copies shall be provided to ME Engineers for reference only.

C. Field Test Reports: Indicate and interpret test results for compliance with performance requirements of installed systems as well as acceptance by AHJ.

D. Commissioning: The Contractor shall complete commissioning of the system and issue a final report. Commissioning shall be performed upon completion of system, and after its testing and retuning. Report shall be completed and finalized by the Contractor prior to system acceptance by the Owner.

E. Warranties: The Contractor shall provide a warranty on all parts, components, and labor Warranty period shall start based on acceptance by Owner upon completion of all installation, testing and optimization.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: The installation supervisor for both installation and maintenance of units required for this Project must be an experienced installer who is an authorized representative of the DAS Vendor.

1. Contractors shall have at least five (5) years of successful installation experience with projects utilizing wireless systems including DAS.
2. The company shall be a certified installer of the DAS manufacturer, and shall provide a 1-year warranty on installation/applications.

B. Electrical Components, Devices, and Accessories: These shall be listed and labeled as defined in NFPA 70, NEC, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use. All materials shall be Underwriters Laboratories (UL) Listed unless otherwise noted or required by AHJ.

1.5 CODES AND STANDARDS

A. All work including materials and installation shall conform to all applicable sections of currently adopted editions of the codes and standards listed below or the codes, standards and specifications published by the organizations listed below:

1. All applicable / adopted national, state and local codes.
2. ANSI: American National Standards Institute (ANSI).
3. ANSI/EIA/TIA standards as applicable to DAS.
4. ASTM: American Society for Testing and Materials
5. BICSI TDM Telecommunications Distribution Methods Manual (current edition).
6. BICSI Wireless Design Reference Manual (current).
7. Emergency Responder Requirements as determined by AHJ, Fire Department, Police Department, and Ambulance/EMS.
8. ICEA: Insulated Cable Engineers Association
9. IEEE: Applicable requirements and recommended installation practices of IEEE Standards 80, 81, 141 and 142 pertaining to grounding and bonding of systems, circuits and equipment.
10. IEEE-1100-1999: Recommended Practice for Powering and Grounding Sensitive Electronic Equipment.
11. International Fire Code
12. National Electrical Code
13. NESC: National Electrical Safety Code
14. NEMA: Applicable requirements of NEMA Standards/Pub No.'s OS1, OS2 and PUB 250 pertaining to raceways, outlet and device boxes, covers, and box supports.
15. NFPA-70/NEC: National Electrical Code.
16. NFPA-70B: "Recommended Practice for Electrical Equipment Maintenance" pertaining to installation of cable tray systems.
17. NFPA-72: National Fire Alarm and Signaling Code
18. UL Compliance: Applicable requirements of UL 50, UL 514-series, and UL 886 pertaining to electrical boxes and fittings.
19. UL Compliance: Applicable requirements of UL Standards No.'s 467, Electrical Grounding and Bonding Equipment", and 869 "Electrical Service Equipment", pertaining to grounding and bonding of systems, circuits and equipment. In addition, comply with UL Standard 486A, "Wire Connectors and soldering Lugs for Use with Copper Conductors." Provide grounding and bonding products which are UL-listed and labeled for their intended usage.

1.6 SEQUENCING AND HANDLING

A. All work shall be reviewed and coordinated with the Owner and/or Construction Manager prior to commencing.

B. DAS, infrastructure, and equipment are sensitive to environmental conditions including but not limited to temperature, dirt, dust, and water. The contractor shall ensure the storage and installation of all system components are sequenced and scheduled accordingly to prevent any damage, loss of performance, and warranty voiding.

C. Installation shall be coordinated with all Ceilings, Structural, Electrical, HVAC, Plumbing, Fire Protection, and other trades to eliminate disruption and/or conflict with other systems.

1.7 WARRANTY

A. Warranty periods shall be provided on the components noted below and as listed within this section. Contractor shall submit all standard manufacturer product warranty information, including warranty length for each major component, including but not limited to passive devices (antennas, splitters, couplers, etc.), cabling (coaxial, fiber, and power), active components (remote radios, head-end equipment, etc.) and power supplies (power plants, rectifiers, batteries, etc.).

B. A warranty on the Work shall be provided by the Contractor. If, within warranty time period after the date of final acceptance by Owner of the installation or within such longer period of time as may be prescribed by law or by the terms of any applicable special warranty required by the Contract Documents or provided by a manufacturer, any of the work or equipment is found to be defective or not in accordance with the Contract Documents, the Contractor shall correct it promptly including all parts and labor after receipt of notice from the Owner to do so unless the Owner has previously given the Contractor a written acceptance of such condition. This obligation shall survive termination of the contract. The Owner shall give such notice promptly after discovery of the condition. Such notice shall be provided by Owner representatives, to be identified, either verbally or in writing. Warranty period shall start based on acceptance by Owner upon completion, testing and acceptance of the installation by the Wireless Carriers.

C. The cabling Manufacturer shall provide a warranty for all cable infrastructure components. This warranty shall cover all components including cable, terminations, patch panels, and wiring panels, etc. to maintain the specified performance and physical criteria. Any such components, link, or channel shall be replaced by the Manufacturer at no cost to Owner during this period. The Contractor and Manufacturer shall submit all information and documentation on Warranty.

1.8 INSTALLATION

A. General:

1. The Contractor shall examine areas and conditions under which DAS infrastructure is to be installed. Notify Owner, Architect, and Engineer in writing of conditions detrimental to proper completion of the work. Do not proceed with work until unsatisfactory conditions have been corrected in a manner acceptable to the installer.
2. The Contractor shall be knowledgeable of work to be performed by other trades and take necessary steps to integrate and coordinate their work with other trades.
3. The Contractor shall verify space requirements and locations before starting cable installations and terminations. Inappropriate conditions shall be immediately reported to Construction Manager, Owner, Architect, and Engineer prior to initiating installation.
4. All DAS communications infrastructure shall be installed for optimal performance.
5. All DAS and communications infrastructure shall be installed to allow for easy additions, moves, and other changes in the future.
6. Final labeling scheme for all DAS and communications components shall be coordinated with the Owner and Engineer, prior to initiating work. Labeling scheme shall include but not be limited to communications rooms, cabinets, racks, cable terminal blocks and patch panels, antennas, outlets, cables, etc.
7. The Contractor is required to coordinate their efforts with the other trades and sub-contractor who may be working within the same vicinity to avoid conflict and lost time.

8. The Contractor shall supply all necessary tools, equipment, accessories, safety equipment, protective clothing, etc., as customary for the craft and necessary for the installation.
9. The contractor shall not install any component in a manner or condition that will void manufacturer and/or contractor warranty. Any such conditions that prevent an acceptable install shall be immediately reported to Construction Manager or General Contractor, Owner, Architect, and Engineer prior to initiating installation. All mis-installed components will be removed and replaced with new, appropriate components at the Contractor's expense. No additional cost will be submitted to Owner.
10. All equipment shall be installed in a neat and workmanlike manner, arranged for convenient operation, testing and future maintenance.

B. Raceway Installation:

1. Contractor shall comply with all industry codes and standards for DAS raceway installation, including but not limited to, appropriate conduit size, fill ratio, bend radii, number of bends and/or distance between pull-boxes, etc.
2. Fire seal all raceway penetration and openings to maintain fire rating after communications cables are installed.
3. Provide labels on all communications pull-boxes and junction-boxes.
4. Identify conduits at cable tray end by architectural room number.

C. Cable Installation: The following procedures shall apply to cable installation:

1. All distribution cable, backbone cable, horizontal cable, and antenna cable must be plenum rated.
2. All DAS and communications cables routed within Telecom Rooms shall be bundled and combed to provide a neat and organized appearance, per industry standards.
3. Install cables concealed in accessible ceilings. Install cables according to manufacturer's recommended installation practices using approved hangers at a maximum spacing of every 48 inches (1.2m), where deemed acceptable by AHJ.
4. Cable bends shall not be less than that recommended by the manufacturer of the cable. Do not exceed manufacturer's minimum bending radii and other cable requirements.
5. The contractor shall not install any cable in conduits that does not have the appropriate protect bushings on conduit ends.
6. Do not install bruised, kinked, scored, deformed, or abraded cable. Remove and discard cable if damaged during installation and replace it with new cable.
7. All exposed conduit routing shall be coordinated with the Architect prior to installation. Contractor shall not route any cable exposed to view. Exposed cable (when allowed by AHJ) shall only be routed in cable trays or in j-hooks above accessible ceiling.
8. Care shall be taken so as not to damage cable during the installation process and that the manufacturer's and industry standard's pull tension specification is not exceeded.

D. Antenna Installation: The following procedures shall apply to antenna installation:

1. All antenna locations shall be coordinated with ME Engineers prior to initiating any work.
2. Install antennas per manufacturer's requirements.
3. Contractor shall install antennas with all necessary supports to ensure safe installation and support to prevent falling.
4. Antennas shall be rated accordingly and as applicable for the installation type, location, condition, and application supported.

E. Equipment Installation: The following procedures shall apply to equipment installation:

1. Install surge suppressors where ac-power-operated devices are not protected against voltage transients by integral surge suppressors specified in UL1449. Install surge suppressors at the devices' power-line terminals. Comply with Division 26 Section "Transient Voltage Suppression."
2. Mount electronic equipment in the types of cabinets recommended by manufacturer. Group related items in methodical sequence.
3. Arrange equipment to facilitate access for maintenance and to preserve headroom and passage space.
4. Interface DAS equipment with all base station equipment as required during installation period of DAS.
5. Label all equipment and interfaces.

F. System Management and Monitoring Software Installation: The following procedures shall apply to system management and monitoring software installation:

1. Coordinate all work with fire alarm contractor for interface to FACP for monitoring.
2. The system management and monitoring software shall be fully set up, programmed, and configured.

G. Design Coordination: All components proposed by the Contractor shall be coordinated with the Owner and Architect.

H. Record documentation shall be submitted to the Owner by the Contractor at the completion of the DAS installation. The contractor shall submit all information necessary to operate and maintain the system including but not limited to the following:

1. As-Built Documents
2. Operations and Maintenance Manuals
3. Maintenance Schedule (with Company Contact Information)
4. Troubleshooting Guide
5. Product Data and Manufacturer Cut-Sheets
6. Warranty Information and Contact
7. Manufacturer’s Product and Installation Certificate
8. Log (troubleshooting, replacement, expansion, and replacements)
9. Labeling Scheme

This page is intentionally left blank.

SECTION 28 51 00- INFORMATION MANAGEMENT AND PRESENTATION

PART 1 - GENERAL

1.1 RELATED WORK

A. Division 14 – General Elevator Requirements

B. Section 28 13 00 – Electronic Access Control System

C. Section 28 23 00 – Video Surveillance

1.2 DEFINITIONS

A. ACS – Access Control System

B. CSA – Client Software Application

C. DGM – Dynamic Graphical Maps

D. DVS – Digital Video Server

E. CDMS – Collaborative Decision Management System

F. ALPR – Automatic License Plate Recognition

G. SDK – Software Development Kit

H. SMA – Software Maintenance Agreement

I. SSM – Server Software Module

J. UI – User Interface

K. USP – Unified Security Platform

L. USW – Unified Web Client

M. VMS – Video Management System

1.3 QUALIFICATIONS

A. The system programmer shall have attended manufacturer training and obtained certification in Genetec Security Center - Omnicast™ Technical Certification.

B. Optionally, the system programmer shall have attended manufacturer training and obtained certification in Genetec Security Center - Enterprise Technical Certification.

C. The system programmer shall be a Genetec certified partner with the following level of qualification:

1. Unified Elite Reseller

D. The system programmer shall submit proof of certifications.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS

A. The CDMS shall be seamlessly embedded in the Unified Security Platform (USP).

B. The CDMS shall be based on a true open architecture that shall allow the use of non-proprietary workstation and server hardware, non-proprietary network infrastructure, and non-proprietary storage.

C. The CDMS shall offer a complete and scalable operational toolset that allows real-time monitoring and situation management, as well as post-event analysis capabilities.

D. The CDMS shall be provided by the same manufacturer as the core of the USP and shall interface natively with all components of the USP including, but not limited to, VMS, ACS, communication, intrusion, plugins, and add-ons.

E. The USP and CDMS shall be forward compatible so upgrade of one does not prevent from using the other.

F. The CDMS shall be seamlessly compatible with the USP and any of its components.

G. The CDMS shall offer the following operational tools:

1. Incident management
2. Document management
3. Rules Engine
4. Automation workflow
5. Standard operating procedures
6. Incident monitoring operator interface
7. Incident reports

H. The CDMS shall provide situational intelligence to the operator with a map-centric approach and detailed overview of incident data, combining incident history, operator comments, workflow and operator action logs, standard operating procedures, relevant live and playback video, and an aggregated events sequence of the incident. Aggregation of events shall have the option to be based on the entities themselves or on designated areas on a per category basis.

I. The CDMS shall be scalable to support an average continuous flow of up to 600 events per second, with temporary bursts of 5,000 events per second. It shall be capable of dispatching a minimum of 20 incidents per second and executing associated automation workflows.

J. The CDMS architecture shall be highly reliable with zero single points of failure. The CDMS servers shall have the capacity to fail over with less than 1 minute of downtime and a guarantee of zero loss of events and incidents. No action from the user shall be required in the event of a server failure.

K. The communication between components of the CDMS shall be encrypted, robust and reliable.

L. The CDMS shall offer an SDK to customize the incident triggering, the incident closing conditions, the automation workflow activities, the incident data, and the incident details view. It shall also be possible to design custom widgets within the CDMS user interface.

M. The CDMS shall offer a standard API to trigger and dispatch incidents, get incident configurations, get incident details including content of the dynamic standard operating procedures, change incident states, change incident priorities, change incident descriptions, link incidents, change incident locations, change incident types, set incident external id, query history of an incident.

N. The standard API shall provide a notification mechanism to subscribe to incident updates

O. Any of the devices or features that are already licensed in the USP shall not require additional licenses to work within the CDMS.

P. The CDMS shall allow operator-based configuration of the CDMS users. The role-based privileges are inherited from the USP privileges.

Q. The CDMS shall log all configuration changes in an audit trail with before and after configurations.

R. The CDMS shall log all the user activities that are executed during the time that an incident is active.

S. The CDMS shall provide the capability to copy an incident configuration in part or in full to one or multiple incident types.

T. The CDMS shall provide the ability to configure incidents in a test mode that would allow user with the appropriate privilege to validate different parameters before activating the incident configuration.

2.2 CDMS GRAPHICAL USER INTERFACE

A. The CDMS shall offer a simple and user-friendly GUI within the USP GUI. The CDMS tools shall be a series of additional tasks.

B. The CDMS shall provide tasks to the USP for:

1. Incident monitoring
2. Incident detail view
3. Incident reporting
4. Incident management

C. Incident monitoring shall provide:

1. A list of current incidents. The list of current incidents shall be adaptable to the operator’s role and needs, with tools such as multi-level grouping of incidents, and advanced filtering and searching.
2. A Dynamic Graphical Map displaying incident locations and providing full situational awareness of the security in a geographical area.

3. An Incident Detail Panel with all related information for the selected incident:
    a. Overview
    b. Latest activities
    c. Related incidents
    d. Related entities
    e. Related documents
    f. Custom views (SDK)
4. Access to all controls available in the USP.

D. CDMS shall be designed for optimal use with multiscreen workstations, allowing a combination of the incident list, the dynamic graphical map, and the incident details to be displayed on each screen. The CDMS GUI shall be capable of synchronizing all screens so that the selection of an incident will automatically focus all other screens to this incident data. The screens shall have the capability of being synchronized by one or any combination of incident selection, view filter or column view settings.

E. The Dynamic Graphical Map shall provide a tooltip with incident summary when selecting an incident on the map. Multiple incidents at the same location will cluster into one object on the map. The cluster shall display the incident with the highest priority level and the number of incidents in the cluster. It shall also be possible to display a list of all the incidents within the cluster.

F. It shall be possible to configure a map to display all incidents from all maps in a single view based on their relative GPS coordinates.

G. The Incident Monitoring task can be configured to display the list of incidents, the incident map, the incident details, or any combination of these elements.

H. The incident list shall allow the operator to group the incident by:
1. Incident category
2. Incident type
3. Incident priority
4. Incident state
5. Incident location
6. Incident owner
7. Any custom incident attributes

I. It shall be possible to save the operator interface, and the configuration of the GUI shall remain the same after an operator logon or logoff.

J. The CDMS GUI shall provide advanced tools to assist operators when focusing on a mission. The filter can be applied to the current task or simultaneously on all tasks.

K. The CDMS GUI shall provide an expandable display area for editing the diagram associated with a dynamic Standard Operating Procedure.

2.3 CDMS INCIDENT MANAGEMENT

A. The CDMS shall be the interface that displays all situations as incidents.

B. The CDMS Incident management shall provide the ability to trigger incidents manually or automatically, based on a correlation of events.

C. An incident shall be the holistic description of the situation and support the following attributes:

1. Visual:

a. Color.

b. Icon. Incident management shall provide the ability to customize incident types using a set of imported icons.

2. Sound.

3. Incident category. Incident category shall allow an operator to organize incident types in a logical tree.

4. A location. The location can be an entity (camera, door, zone, area) or a geographical coordinate.

5. A priority level.

6. A description.

7. States.

8. Standard operating procedures.

9. History of activities.

10. Attach Entities. Entities related to the source of events triggering the incident shall be automatically associated to the incident.

11. Attached documents. Documents and URLs providing more information or guidance on the incident and its management.

12. A schedule during which automatic trigger of an incident by the system will be valid.

D. The CDMS shall allow the operator to configure up to 255 priority levels, configurable to respect the operation’s naming convention.

E. The CDMS shall provide a configurable state machine that will define the transition of states. For example, you can configure state E to be available only if the incident is in state C or D. Therefore, if the incident is in state A or B, state E is not available.

F. Incident states shall be configurable so that only specific users have the privilege to change the incident state to a particular state.

G. The Incident management shall provide management of incident ownership. It shall be possible to explicitly request or release the ownership of an incident. Ownership of an incident shall be provided immediately to an operator who starts working on an incident.

H. A supervisor shall be able to view all incidents that are under his supervision and see the ownership of each incident. In the same view, the supervisor shall also be provided with real-time information about who is currently monitoring an incident.

I. The CDMS shall notify the supervisor when an operator skips a step in the standard operating procedure (SOP).

J. The CDMS shall provide the capability to request the current owner's consent before taking ownership of an incident.

K. The CDMS shall provide a way to define collaborative incidents to allow multiple operators to work on the same incident.

L. It shall be possible to configure different SOP and automation workflows for different recipients of a collaborative incident.

M. It shall be possible to change the incident type, manually or automatically.

N. The CDMS shall allow the export of the incident type and category configuration with custom icons. The CDMS shall allow the exported configuration to be imported.

O. The CDMS shall allow the export of all sub-incidents attached to a collaborative incident or all incidents created from a master incident, from the automation workflow by changing the incident type manually.

P. For each incident, it shall be possible to open the incident details or configure the incident to automatically open incident details. The incident details will open on a configurable screen and provide, based on the incident type configuration, the following information:

1. A layout of all live and playback video related to the incident, including the camera associated to the source and location of the incident, as well as the local map centered on the incident location.
2. History of the incident including:
    a. All events related to the incident
    b. System automation workflow activities
    c. Operator actions for the incident
    d. Comments about the incident

Q. Operators shall be able to perform the following actions:

1. Change the incident state.
2. Forward the incident.
3. Transfer the incident.
4. Edit the incident:
    a. Change the description
    b. Change the priority level
    c. Release the ownership
5. Attach additional entities to the incident.
6. Link related incidents.

7. Attach a document as a URL link to the incident.

R. Incident Dispatch:

1. The CDMS shall provide the ability to dispatch an incident to a user or group of users. Dispatching an incident to a restricted number of users will secure the access to information.

    a. Incident dispatch shall have the capability to get dispatched to selected user group based on order of logon (round robin). If all users are logged off, incident dispatch follows the format of ordinary incident dispatch and gets dispatched to everyone in the selected user group.

2. The CDMS shall allow the distribution of specific tasks (managed as sub-incidents) that are associated to a unique incident, to different teams. Procedures can be performed in parallel.

3. Incident supervisors shall be able to see all sub-incidents associated with a main incident.

4. The CDMS shall manage the dispatch of incidents by:

    a. Incident type

    b. Schedule

    c. Location. Where it shall be possible to define the location by:

        1) Entity

        2) Area (group of entities)

5. It shall be possible to trigger a new dispatch during the course of an incident:

    a. By an operator action in the GUI. The user shall have the choice of:

        1) Transferring the incident, meaning that the incident will no longer be in the user’s incident list. The user has the option to request acknowledgement of the transfer.

        2) Forwarding the incident, meaning that the incident will continue to be in the user’s incident list and the user remains a recipient of this incident.

        3) Requesting to take ownership of the incident.

        4) Escalating an incident

6. It shall be possible to define profiles to ensure the adequate distribution of the active incidents among the operators who are currently logged on to the system and filter incidents by type and by occurrence location.

    a. The system shall have the capability to automatically assign incident management profiles to users when they log on.

    b. Profiles shall only be assigned to users that are logged on to the system.

    c. Profiles shall be assigned by the system or by users with the required privileges.

    d. It shall be possible to assign a profile to specific users or user groups.

    e. It shall be possible to specify incident types and locations associated with a profile.

f. When a profile is assigned to an operator, the system shall hide all incidents not specified by the profile from the operator's view.

g. It shall be possible to assign multiple profiles to an operator. When multiple profiles are assigned, the operator shall see the incidents specified by all assigned profiles.

h. It shall be possible to activate or deactivate an existing profile.

i. Modifications to the profile configuration shall be traceable in a report, and the report shall be exportable.

j. The load shall be balanced based on availability of the operators and their privileges

k. Incidents shall be automatically transferred to authorized recipients if no operator is online for a specific profile

S. Ability to define reminders:

a. Reminders for the operator shall be set on a schedule.

b. The reminders shall display specific text messages for the operator. Reminders shall also have to ability to be added automatically through the incident automation workflow.

c. A warning message shall be displayed when an incident is resolved with an active reminder.

2.4 CDMS INCIDENT REPORT

A. The CDMS shall offer a task to manage and generate reports. The ability to run a report is a user privilege.

B. It shall be possible to query the incident history filtering by:

1. Incident type
2. Incident state
3. Location
4. Priority
5. Trigger time range
6. Incident owner
7. Description

C. The result of a report query shall provide a list of incidents as well as a visual of these incident locations on the map. When more than one incident is reported at the location, the GUI will cluster these incidents on the map.

D. Selecting an incident from the list or on the map will display the incident details that contain the same information available in the Incident Monitoring task.

E. For closed incidents, the incident shall be in read-only mode with the exception of adding links to related incidents.

F. The Report task shall also report the user activity log of the USP for the time in which the operator was owner of the incident and was monitoring it, in order to provide a view of all actions taken towards the resolution of this incident.

G. It shall be possible to export all the data included in the details of the incident. The incident export shall at minimum include:

1. The incident overview: state, owner, description, ID, priority, location, and GPS.

2. The activity log, including comments, events, and all actions taken by the system or the operator during the resolution of this incident.

3. Related entities and documents.

4. Map snapshot. It shall be an option for the operator when exporting.

5. Camera snapshot at the time of the aggregated events. It shall be an option for the operator when exporting.

6. Video sequences of the event trigger.

H. The CDMS shall offer all reports in a visual presentation format (such as pie charts, lines, columns, and rows).

I. The CDMS shall support the following report formats:

1. HTML

2. PDF

3. XML

4. Custom format

J. Specific privileges shall be required to modify incidents from the report interface.

K. It shall be possible to generate a report based on the profiles defined for the CDMS.

L. Incident report retention period capability shall be customizable (from one to 9999 days or indefinitely).

1. The profile report shall be exportable and printable.

2. Profile reports shall allow filtering on profile identifier, initiators, recipient, and modification time.

3. Columns for the profile reports shall be configurable.

2.5 CDMS DYNAMIC DOCUMENT MANAGEMENT

A. The CDMS platform shall provide the ability to dynamically index documents to an incident in order to improve the efficiency of access to information for an operator.

B. A document shall be automatically attached to an incident if the document properties match the incident properties. The following properties shall be available:

1. Incident type

2. Schedule

3. Location. Location can be an entity or an area.

4. User or user group of the operator monitoring the incident.

C. The CDMS shall offer the ability to automatically link a document to a step in a standard operating procedure.

D. Document Management shall provide a file system to store all documents as well as the document URLs for the use of third-party file systems.

2.6 CDMS RULES ENGINE

A. The CDMS shall offer an advanced Rules Engine to correlate events and trigger incidents using Boolean rules.

B. Configuring the Rules Engine shall be graphical without need for a script.

C. The Rules Engine shall provide the ability to configure a sequence of conditions with AND and OR so that when the sequence is matched, an incident is triggered.

D. The condition of the Rules Engine shall allow the user to configure:

1. A list of events from different locations or the same location with an OR operand between them.

2. The number of occurrences of any selected events.

3. A max lapse of time during which the condition must be validated.

4. A filter for other events in the system.

E. It shall be possible to configure a complex sequence of rules by applying the occurrence, the interval, and event filtering.

F. It shall also be possible to script the rules in advance and import them into the system later.

2.7 CDMS AUTOMATION WORKFLOW ENGINE

A. The CDMS shall provide an Automation Workflow Engine to automate the response to an incident type.

B. The automation workflow shall be highly scalable and enterprise class, allowing complex business rules to be implemented.

C. The CDMS shall provide a graphical automation workflow designer. No scripting competence shall be required to implement a workflow.

D. It shall be possible to define an automation workflow for each incident type. The automation workflow shall be a series of activities that are sequentially executed.

E. It shall be possible to copy and paste a portion or the entire automation workflow within another automation workflow.

F. The automation workflow shall support the execution of parallel branches.

G. The automation workflow shall support conditional activities using IF/ELSE scenarios.

H. It shall be possible to look at door state (locked, unlocked, secured, unsecured or opened) to enable or disable additional actions.

I. The Automation Workflow Engine shall provide the following activities:

1. Acknowledge alarm
2. Add reminders
3. Aggregate events
4. Arm zones
5. Change display colors
6. Change incident descriptions
7. Change incident states
8. Change incident types
9. Change priorities
10. Close incidents
11. Delay
12. Forward incidents
13. Transfer incidents
14. Disarm zones
15. Display entities
16. Dispatch to
17. Export incidents
18. Play sounds
19. PTZ commands
20. Reset area people count
21. Run a macro
22. Send an email
23. Set threat level
24. Trigger alarms
25. Trigger incidents
26. Unlock door explicitly
27. Wait for events
28. Wait for incident states

29. Custom activities: build your own activities leveraging the SDK to interact with Security Center and/or external systems

30. Play an MP3 or WAV file to a Sipelia™ public addressing system.

31. Triggers output

32. Enable/Disable state transition

33. Wait for incident priority

J. The Automation Workflow Engine shall provide a framework to create custom activities that allow integration into a global business process.

K. The Automation Workflow shall provide a way to access contextual information for Mail and Macro activities.

2.8 CDMS STANDARD OPERATING PROCEDURE

A. The CDMS shall provide guidance for operators in the form of a standard operating procedure (SOP) for the response to an incident type.

B. The SOP shall be interactive and offer an operator-acknowledgement-audit for each SOP step.

C. The SOP shall be dynamic and provide the ability to adapt the next steps in a procedure based on the responses to previous steps in the procedure.

D. The configuration of the dynamic sequence for the SOP shall be visually represented by a flowchart.

E. The CDMS GUI shall provide the ability to skip a step of the SOP and request a justification for skipping the step.

F. It shall be possible to configure an SOP to be either sequential, requiring the validation of each step in order to access the next one, or to be left at the discretion of the operator to execute the steps as a check list in a free order.

G. The SOP shall be configurable so that the validation of all steps in the SOP is required in order to close the incident.

H. Each step shall be optionally associated to a document in the form of a URL, or a document in a supported format (such as Word, PDF, or HTML).

I. The CDMS shall track the elapsed time for each step of the SOP, as well as the total elapsed time from the initial response to resolution.

J. The CDMS shall provide the capability to import and export the SOP individually as CSV files.

K. The CDMS shall provide the ability to configure standard options when defining dynamic steps of the SOP.

L. The CDMS shall provide the ability to configure Dynamic SOP (DSOP) with a decision tree view.

M. The CDMS shall provide the ability to execute specific actions based on DSOP answers. Answers shall be provided via predefined or custom selections. Selections can be made using a mouse or keyboard shortcuts.

N. The CDMS shall provide a GUI to configure the DSOP and connect the different steps based on the operator answer. The CDMS shall provide the ability to call a Sipelia™ device when using Sipelia™ integration from the dynamic SOP step.

O. A maximum delay shall be allowed for a user to initiate the procedure. Automated actions associated with this time to response threshold shall be configurable.

P. A maximum delay shall be allowed for a user to complete the procedure. Automated actions associated with this time to resolution threshold shall be configurable.

Q. A minimum time shall be allocated for a user to complete the procedure. Closing the incident before passing this time to resolution threshold shall trigger automated actions.

R. A visual indicator shall be displayed when maximum time to response or the maximum time to resolution for the incident is exceeded.

2.9 ELECTRONIC ACCESS CONTROL SYSTEM

A. The Information Management & Presentation shall be unified seamlessly with the Access Control System specified in section 28 13 00 within the USP. All the access control features available in the USP shall be available to the Information Management & Presentation software.

B. The Information Management & Presentation shall be unified seamlessly with the Access Control System plugins of the USP. All the access control features available in the USP shall be available to the Information Management & Presentation software.

2.10 VIDEO MANAGEMENT SYSTEM

A. The Information Management & Presentation shall be unified seamlessly with the Video Management System specified in section 28 23 00 within the USP. All video management features available in the USP shall be available to the Information Management & Presentation software.

B. The Information Management & Presentation shall be unified seamlessly with the Video Management System plugins of the USP. All the video management features available in the USP shall be available to the Information Management & Presentation software.

2.11 SERVER ADMINISTRATOR USER INTERFACE REQUIREMENTS

A. The Server Administrator shall be used to configure the SSM and the Directory Role (main configuration) and its database(s), to apply the license, and more.

B. The Server Administrator shall be a web-based application. Through the Server Administrator, it shall be possible to access the SSM across the network or locally on the server.

C. Access to the Server Administrator shall be protected via login name, password, and encrypted communications.

D. The Server Administrator shall allow the administrator (user) to perform the following functions:

1. Manage the system license.

2. Configure the database(s) and database server for the Directory Role.

3. Activate/Deactivate the Directory Role.

4. Manually back up the Directory Role database(s) and/or restore the server database(s), as well as configure scheduled backups of the databases.
5. Define the client-to-server communications security settings.
6. Configure the network communications hardware, including connection addresses and ports.

2.12 SMARTPHONE AND TABLET APP GENERAL REQUIREMENTS

A. The USP shall support mobile apps for various off-the-shelf devices. The mobile apps shall communicate with the USP over any Wi-Fi or mobile network connection.

B. Mobile apps shall communicate with the USP via a Mobile Server Role (MSR). All communication between the mobile apps and the MSR shall be based on standard TCP/IP protocol and shall use TLS encryption with digital certificates to secure the communication channel.

C. Supported device manufacturers shall include (refer to Mobile App specifications for latest compatibility list):

1. Apple devices running iOS 11 or later
2. Android devices 6.0 or later

D. It shall be possible to download the mobile apps from the Central application store (Apple iTunes App Store, Google Play).

E. It shall be possible to push configuration to the mobile devices through a Mobile Device Management solution such as VMWare Workspace One or Microsoft Intune.

F. Functionalities

1. Core

a. Ability to logon/logoff to the USP using an authorized user profile of the system.
b. Ability to support passive authentication from a single sign-on provider (Open ID Connect or SAML2 identity provider)
c. Ability to use biometric features (thumbprint, face ID, etc.) to perform connection to the system.
d. Ability to change the picture or the password of the user of the mobile app.
e. Ability to view the current Threat Level of the system.
f. Ability to change the current Threat Level of the system.
g. Ability to execute hot actions configured in the user profile.
h. Ability to view entities from the USP:

1) Cameras
2) Doors
3) ALPR cameras
4) Web Tile Plugins

5) Layouts

6) Camera Sequences

7) Macros

i. Ability to navigate the system hierarchical view of the entities and search entities in the system.

2. Video

a. Ability to view live and recorded video from the cameras of the USP. A maximum of four cameras shall be displayed.

b. Ability to view video in native format (H.264).

c. Ability to display live and recorded video side-by-side for a specific camera.

d. Ability to perform digital zoom on cameras.

e. Ability to perform actions on cameras such as add a bookmark, control a PTZ, control the iris/focus function, save a snapshot, start/stop recording.

f. Ability to view camera layouts.

g. Ability to view camera sequences.

h. Ability to run a camera events report.

i. Ability to change the video quality on the cameras displayed on the mobile app.

j. Ability to use the camera of the smartphone and stream a live video feed to a video recorder in the system.

3. Access Control

a. Ability to view the door state and the door lock state.

b. Ability to perform actions on a door, such as unlock the door, set the door in maintenance mode, override the door unlocking schedule.

4. Automatic License Plate Recognition

a. Ability to view live events raised by an ALPR camera.

b. Ability to view the read image, context image, and all metadata captured by the ALPR camera

c. Ability to run an ALPR event report.

d. Ability to add a license plate to a hotlist on the system.

5. Alarm Management

a. Ability to receive push notifications to notify mobile operators that an alarm was received.

b. Ability to view all active alarms assigned to the mobile operator.

c. Ability to perform action on an alarm such as acknowledge, forward, or alternate-acknowledge an active alarm.

d. Ability to view entities attached to the alarm.

6. Map

a. Ability to display a geographic map with USP entities geo-located on the map.

b. Ability to view any entity configured on the map.

c. Ability to search for entities or locations on the map.

G. It shall be possible to send a message from the client user interface to a mobile operator.

H. It shall be possible to send a live or playback video sequence from the client UI to a mobile operator.

I. It shall be possible to view mobile operators who enabled location tracking on a map in the system. The location of the mobile operator should update in real time

2.13 HEALTH MONITOR

A. The USP shall monitor the health of the system, log health-related events, and calculate statistics.

B. USP services, roles, agents, units, and client apps will trigger health events.

C. The USP shall populate the Windows Event Log with health events related to USP roles, services, and client apps.

D. A dedicated role, the Health Monitoring Role, shall perform the following actions:

1. Monitor the health of the entire system and log events.

2. Calculate statistics within a specified time frame (hours, days, months).

3. Calculate availability for clients, servers, and video/access/ALPR units.

E. A Health Monitoring task and Health History reporting task shall be available for live and historical reporting.

F. A Health Monitoring dashboard task shall be available in the client application user interface to provide a live display, such as pie charts and event lists, for quick visual assessment on the general health of the system.

G. A web-based, centralized health dashboard shall be available to remotely view unit and role health events of the USP.

H. Detailed system care statistics will be available through a web-based dashboard providing health metrics of USP entities and roles, including Uptime and mean-time-between-failures.

I. All events raised in the system can be used for automating the UPS event/action management.

J. Health events shall be accessible via the SDK (can be used to create SNMP traps).

2.14 USP GENERAL REQUIREMENTS

A. The Unified Security Platform (USP) shall be an enterprise class IP-enabled security and safety software solution.

B. The USP shall support the seamless unification of IP access control system (ACS), IP video management system (VMS), and IP automatic license plate recognition system (ALPR) under a single platform. The USP user interface (UI) applications shall present a unified security interface for the management, configuration, monitoring, and reporting of embedded ACS, VMS, and ALPR systems and associated edge devices.

C. Functionalities available with the USP shall include:

1. Configuration of embedded systems, such as ACS, ALPR, and VMS systems.
2. Live event monitoring.
3. Live video monitoring and playback of archived video.
4. Alarm management.
5. Reporting, including creating custom report templates and incident reports.
6. The Federation feature for global monitoring, reporting, and alarm management of multiple remote and independent ACS, VMS, and/or ALPR systems spread across multiple facilities and geographic areas.
7. Global cardholder management across multiple facilities and geographic areas each with their own independent ACS system.
8. Microsoft Active Directory integration for synchronizing USP user accounts and ACS cardholder accounts.
9. Intrusion device and panel integration (live monitoring, reporting, and arming/disarming).
10. SIP Intercom device integration for bi-directional communication.
11. Integration with third party systems and databases via plug-ins (access control, video analytics, point of sale, and more).
12. Dynamic graphical map viewing.
13. Asset management system integration.

D. The USP shall be deployed in one or more of the following types of installations:

1. Unified access, ALPR, video platform, and any combination thereof.
2. Standalone access control, ALPR, or video platform.
3. Unified access and video platform that federates multiple remote ACS, VMS, and ALPR.
4. Standalone video platform that federates multiple independent remote VMS.
5. Standalone access control that federates multiple independent remote ACS.
6. Standalone access control that federates multiple independent remote ALPR.

E. Licensing:

1. A single central license shall be applied centrally on the configuration server.
2. There shall be no requirement to apply a license at every server computer or client workstation.

3. Based on selected options, one or more embedded systems shall be enabled or disabled.

F. Hardware and Software Requirements:

1. The USP and embedded systems (video, license plate recognition, and access control) shall be designed to run on a standard PC-based platform loaded with a Windows operating system. The preferred operating system shall be coordinated with the Owner following the manufacturer supported operating systems.

2. The core client/server software shall be built in its entirety using the Microsoft .NET software framework and the C# (C-Sharp) programming language.

3. The USP database server(s) shall be built on Microsoft's SQL Server. The preferred SQL version shall be coordinated with the Owner and compatible with the USP.

4. The USP shall be compatible with virtual environments, including VMware and Microsoft Hyper-V.

5. The USP shall use the latest user interface (UI) development and programming technologies such as Microsoft WPF (Windows Presentation Foundation), the XAML markup language, and .NET software framework.

2.15 USP ARCHITECTURE

A. The USP shall be based on a client/server model. The USP shall consist of a standard Server Software Module (SSM) and Client Software Applications (CSA).

B. The USP shall be an IP enabled solution. All communication between the SSM and CSA shall be based on standard TCP/IP protocol and shall use TLS encryption with digital certificates to secure the communication channel.

C. The SSM shall be a Windows service that can be configured to start when the operating system is booted and run in the background. The SSM shall automatically launch at computer startup, regardless of whether or not a user is logged on the machine.

D. Users shall be able to deploy the SSM on a single server or across several servers for a distributed architecture. The USP shall not be restricted in the number of SSM deployed.

E. The USP shall support the concept of The Federation feature whereby multiple independent ACS, VMS, ALPR installations can be merged into a single large virtual system for centralized monitoring, reporting, and alarm management.

F. The USP shall protect against potential database server failure and continue to run through standard off-the-shelf solutions.

G. The USP shall support up to one thousand instances of CSA connected at the same time. However, an unrestricted number of CSA can be installed at any time.

H. The USP shall support an unrestricted number of logs and historical transactions (events and alarms) with the maximum allowed being limited by the amount of hard disk space available.

I. The USP shall support uninterrupted video streaming. The CSA shall keep existing video connections active in the event that an SSM (except Archiver) becomes unavailable.

J. Roles-Based Architecture:

1. The USP shall consist of a role-based architecture, with each SSM hosting one or more roles.
2. Each role shall execute a specific set of tasks related to either core system, automatic license plate recognition (ALPR), video (VMS), or access control (ACS) functionalities, among many others. Installation shall be streamlined through the ability of the USP to allow administrators to:
    a. Deploy one or several SSM across the network prior to activating roles.
    b. Activate and deactivate roles as needed on each and every SSM.
    c. Centralize role configuration and management.
    d. Support remote configuration.
    e. Move roles over from one SSM to another.
3. Each role, where needed, shall have its own database to store events and role-specific configuration information.
4. Roles without databases, such as The Federation feature, Active Directory, and Global Cardholder Management, shall support near real-time standby without any third party failover software being required.
5. Directory Role:
    a. The Directory Role shall manage the central database that contains all the system information and component configuration of the USP.
    b. The Directory Role shall authenticate users and give access to the USP based on predefined user access rights or privileges, and security partition settings.
    c. The Directory Role shall support the configuration/management of the following components common to the ACS, ALPR, and VMS sub-systems:
        1) Security Partitions, users and user groups
        2) Areas
        3) Zones, input/output (IO) linking rules, and custom output behavior
        4) Alarms. Schedules, and scheduled tasks
        5) Custom events
        6) Macros or custom scripts
    d. The Directory Role shall support the configuration/management of the following components specific to VMS:
        1) Video servers and their peripherals (for example audio, IOs, and serial ports)
        2) PTZ
        3) Camera sequences
        4) Recording and archiving schedules

e. The Directory Role shall support the configuration/management of the following components specific to ACS:

1) Door controllers, and input and output (IO) modules

2) Doors, Elevators, and Access rules

3) Cardholders and cardholder groups, credentials, and badge templates

f. The Directory Role shall support the configuration/management of the following components specific to ALPR:

1) ALPR units and cameras

2) Hotlists, permit lists, and overtime rules

6. The Video Archiver Role shall be responsible for managing cameras and encoders under its control and archiving.

7. The Media Router Role shall be responsible for routing video and audio streams across local and wide area networks from the source (for example DVS) to the destination (for example CSA).

8. The Access Manager Role shall be responsible for synchronizing access control hardware units under its control, such as door controllers and I/O modules. This role shall also be responsible for validating and logging all access activities and events when the door controllers and I/O modules are online.

9. The Automatic License Plate Recognition (ALPR) Role shall be responsible for synchronizing fixed ALPR units (cameras) and mobile ALPR applications under its control. The ALPR Role shall also be responsible for logging all ALPR activities and events.

10. The Zone Manager Role shall be responsible for managing all software zones (collection of inputs) and logging associated zone events. Zones shall consist of inputs from both access control and video devices.

11. The Health Monitoring Role shall be responsible for monitoring and logging health events and warnings from the various client applications, roles, and services that are part of the USP. This role shall also be responsible for logging events within the Windows Event Log and for generating reports on health statistics and health history.

12. Optional Roles

a. The Active Directory Role shall be responsible for synchronizing user accounts and cardholder accounts with a Microsoft Active Directory server.

b. The Intrusion Manager Role shall be responsible for managing third party intrusion devices such as alarm panels and perimeter detection devices. This role shall also be responsible for logging all intrusion events in a database.

c. The Asset Manager Role shall be responsible for integrating and synchronizing with third party asset management systems and logging asset related events. This role shall also be responsible for supporting the execution of asset-related reports such as inventory reports and asset activity reports.

d. The Plug-in Manager Role shall be responsible for the communication between the USP and third party systems such as video analytics, ALPR, access control, video, and building management systems.

e. The Web SDK Role shall be responsible for connecting the USP to any application or interface developed with the Web Service SDK. Applications developed with the Web Service SDK shall be platform independent and rely on the REST protocol for communications.

f. The Communication Management Role shall be responsible for registering the SIP communication endpoints and for managing the call routing.

g. The Video Redirector Role shall be responsible for connecting any video stream to a third party system using standard RTSP protocol. This role shall provide access to live video.

K. Server Monitoring Service (Watchdog):

1. The USP shall include a Server Monitoring Service that continuously monitors the state of the Server Software Module (SSM) service.

2. The Server Monitoring Service shall be a Windows service that automatically launches at system startup, regardless of whether or not a user is logged into his account.

3. The Server Monitoring Service shall be installed on all PCs/servers running an SSM. In the event of a malfunction or failure, the Server Monitoring Service shall restart the failed service. As a last resort, the Server Monitoring Service shall reboot the PC/server should it be unable to restart the service.

2.16 USP ACCESS CONTROL, VIDEO, AND ALPR UNIFICATION

A. The Monitoring UI shall present a true Unified Security Interface for live monitoring and reporting of the ACS, VMS, and ALPR. Advanced live video viewing and playback of archived video shall be available through the Monitoring UI.

B. The Configuration UI shall present a true Unified Security Interface for the configuration and management of the ACS, VMS, and ALPR.

C. The user shall be able to associate one or more video cameras to the following entity types: areas, doors, elevators, zones, alarms, intrusion panels, ALPR cameras, and more.

D. It shall be possible to view video associated to access control events when viewing a report.

E. It shall be possible to view video associated to intrusion panel events when viewing a report.

F. It shall be possible to view video associated to ALPR events when viewing a report.

G. The USP shall support the following Alarm Management functionality:

1. Create and modify user-defined alarms. An unrestricted number of user-defined alarms shall be supported.

2. Assign a time schedule or a coverage period to an alarm. An alarm shall be triggered only if it is a valid alarm for the current time period.

3. Set the priority level of an alarm and its reactivation threshold.

4. Define whether to display live or recorded video, still frames or a mix once the alarm is triggered.

5. Provide the ability to display live and recorded video within the same video tile using picture-in-picture (PiP) mode.

6. Provide the ability to group alarms by source and by type.
7. Define the time period after which the alarm is automatically acknowledged.
8. Define the recipients of an alarm. Alarm notifications shall be routed to one or more recipients. Recipients shall be assigned a priority level that prioritizes the order of reception of an alarm.
9. Define the alarm broadcast mode. Alarm notifications shall be sent using either a sequential or an all-at-once broadcast mode.
10. Define whether to display the source of the alarm, one or more entities, or an HTML page.
11. Specify whether an incident report is mandatory during acknowledgment.

H. The workflows to create, modify, add instructions and procedures, and acknowledge an alarm shall be consistent for access control, ALPR, and video alarms.

I. Alarms shall be federated, allowing global alarm management across multiple independent USP, ACS, VMS, and ALPR systems.

J. The USP shall also support alarm notification to an email address or any device using the SMTP protocol.

K. The ability to create alarm-related instructions shall be supported through the display of one or more HTML pages following an alarm event. The HTML pages shall be user-defined and can be interlinked.

L. Alarm unpacking and packing shall be supported where all the entities associated to an alarm can be display in the Monitoring UI with the single click of a button.

M. The user shall have the ability to acknowledge alarms, create an incident upon alarm acknowledgement, and put an alarm to snooze.

N. The user shall be able to spontaneously trigger alarms based on something he or she sees in the system.

O. An alarm shall be configured in such a way that it remains visible until the source condition has been acknowledged.

P. The user shall be able to investigate an alarm without acknowledging it.

2.17 USP THREAT LEVELS

A. The USP shall support Threat Levels to dynamically change the system behavior to respond to critical events.

B. Threat Levels shall be activated and deactivated by the CSA operator with the right privilege.

C. Threat Levels shall be set on an area or on the entire system.

D. Threat Levels shall affect the system behavior by executing any action available in the USP such as: trigger output, start recording, block camera, override recording quality, arm zone, set a door in maintenance mode, and more.

E. The following specific actions shall be available with Threat Level:

1. Set minimum security clearance to restrict or permit access to cardholders on specific areas on top of the restrictions imposed by the access rules.
2. Set minimum user level to automatically log out user from the USP.
3. Set reader mode to change how the doors are accessed (for example card and PIN, or card or PIN).

F. A visible notification shall be displayed in all operator CSA when a Threat Level is activated.

2.18 USP REMOTE TASK

A. The USP shall provide, through a Remote Task, capabilities to remotely monitor and control the content of other workstations running the CSA (Monitoring UI) that are part of the same system.

B. The USP shall support video wall applications by connecting and controlling multiple workstations and monitors simultaneously.

C. The Remote Task shall be a graphical interface showing a replication of the remote workstation running the CSA (Monitoring UI).

D. The Remote Task shall allow the connection to other workstations using a low bandwidth mode to receive only snapshots of video viewed remotely.

E. The Remote Task shall allow the connection to other workstations using a spy mode to remain invisible to the remotely connected workstation. The spy mode option should be available to users with permission to access the feature.

F. The functionality provided by the remote monitoring and control capability shall include:

1. Remote monitoring and control of the monitoring and alarm monitoring tasks.
2. Ability to remotely switch cameras, doors and zones into display tiles.
3. Ability to remotely control live and playback video.
4. Ability to remotely change the tile pattern.
5. Ability to remotely create and delete tasks.
6. Ability to remotely start/stop task cycling.
7. Ability to remotely go into full screen mode.
8. Ability to remotely save and reload the workspace.

2.19 USP ADVANCED TASK MANAGEMENT

A. USP shall support an infrastructure for managing Monitoring UI tasks used for live monitoring, day to day activities, and reporting.

B. Administrators shall be able to assign tasks and lock the operator`s workspace. The user management of their workspace shall be limited by their assigned privileges.

C. Operators shall be able save their tasks as either Public Tasks or Private Tasks and in a specific partition. Public tasks shall be available to all users. Private tasks shall only be available to the owner of the task.

D. Operators shall be able to share their tasks by sending them to one or more online users. Recipients shall have the option to accept the sent task.

E. Operators shall be able to duplicate a task.

2.20 USP REPORTING

A. The USP shall support report generation (database reporting) for access control, ALPR, video, and intrusion.

B. Each and every report in the system shall be a USP task, each associated with its own privilege. A user shall have access to a specific report task if they have the appropriate privilege.

C. The workflows to create, modify, and run a report shall be consistent for access control, ALPR, and video reports.

D. Reports shall be federated, allowing global consolidated reporting across multiple independent USP, ACS, VMS, and ALPR systems.

E. Access control and ALPR reports shall support cardholder pictures and license plate pictures, respectively.

F. The USP shall support the following types of reports:

1. Alarm reports
2. Video-specific reports (archive, bookmark, motion, and more)
3. Configuration reports (cardholders, credentials, units, access rules, readers/inputs/outputs, and more)
4. Activity reports (cardholder, cardholder group, visitor, credential, door, unit, area, zone, elevator, and more)
5. ALPR-specific reports (mobile ALPR playback, hits, plate reads, reads/hits per day, reads/hits per ALPR zone, and more)
6. Health activity and health statistics reports
7. Other types of reports, including visitor reports, audit trail reports, incident reports, and time and attendance reports

G. Generic Reports, Custom Reports, and Report Templates

1. The user shall the option of generating generic reports from an existing list, generating reports from a list of user-defined templates, or creating a new report or report template.
2. The user shall be able to customize the predefined reports and save them as new report templates. There shall be no need for an external reporting tool to create custom reports and report templates. Customization options shall include setting filters, report lengths, and timeout period. The user shall also be able to set which columns shall be visible in a report. The sorting of reported data shall be available by clicking on the appropriate column and selecting a sort order (ascending or descending).
3. All report templates shall be created within the Monitoring UI.
4. These templates can be used to generate reports on a schedule in PDF or Excel formats.

5. An unrestricted number of custom reports and templates shall be supported.

H. A reporting task layout shall consist of panes with settings (report length, filters, go and reset commands, etc.), the actual report data in column format, and a pane with display tiles. The user shall be able to drag and drop individual records in a report onto one or more display tiles to view a cardholder's picture ID, playback a video sequence, or an ALPR event.

I. The USP shall support comprehensive data filtering for most reports based on entity type, event type, event timestamp, custom fields, and more.

J. The reporting task shall have the ability to display results through graphics such as line charts, bar charts, stacked bar charts, doughnut charts, and pie charts.

K. The user shall be able to click on an entity within an existing report to generate additional reports from the Monitoring UI.

L. The USP shall support the following actions on a report: print report, export report to a PDF/Microsoft Excel/CSV file, export the graphics chart in JPG/PNG, and automatically email a report based on a schedule and a list of one or more recipients.

2.21 USP DASHBOARDS

A. The USP shall support the ability to create dashboards.

B. Operators shall be allowed to view dashboards if they are granted the appropriate privilege. Modifications to dashboards should also be allowed to users granted the appropriate privilege.

C. Dashboards in the system shall be a USP task. A user shall have access to a specific dashboard task if they have the appropriate privilege.

D. Dashboards shall be saved either in a private folder or a public folder.

E. A dashboard shall consist of a canvas with various widgets displayed on the canvas. All widgets should offer the ability to specify location and size to the widget, a title to the widget, a background color to the widget, and the ability to refresh periodically the content of the widget.

F. Dashboard widget types shall be:

1. Image: provides the ability to display an image (JPG, PNG, GIF, BMP) on a dashboard.

2. Text: provides the ability to display a text on a dashboard. The text style shall be configurable, so font, size, color, and alignment can be specified by the user.

3. Tile: provides the ability to display any entity of the USP inside of a tile.

4. Web page: provides the ability to display a URL on a dashboard.

5. Entity Count: provides the ability to display the total number of a specific entity type in the USP.

6. Reports: provides the ability to display the results of any saved reports in the system. The results shall be displayed either by showing the total number of results in the report, a set of top results from the report, or a visual graph from the data returned by the report.

G. It shall be possible to extend the widgets of a dashboard using the SDK. This will provide the ability to develop custom widgets to the system.

H. The USP shall support the following actions on a dashboard: print dashboard; export dashboard to PNG file; automatically email a report based on a schedule and a list of one or more recipients.

2.22 USP FEDERATION FEATURE: MONITORING OF REMOTE SYSTEMS

A. The USP shall support the concept of a Federation feature for access control, video, and ALPR.

B. The Federation feature shall allow multiple independent USP systems (Federated systems) to be unified into a larger virtual system (the Federation feature). This shall facilitate the global monitoring of multiple independent USP systems.

C. The Federation feature shall support the unification of multiple independent video surveillance systems or VMS.

D. Entities that shall be federated and monitored centrally from the Federation feature shall include alarms, areas, cameras, cardholders and cardholder groups, credentials, doors, elevators, ALPR events, and zones (monitored inputs).

E. The Federation feature shall support a cloud-based deployment, whereby the service and infrastructure will be updated automatically and provisioned by the service provider, without need for on-site hardware.

F. The Federation feature shall support Global Alarm Management from the Monitoring UI for access control, video, and ALPR.

G. The Federation feature shall support Global Report Generation from the Monitoring UI for access control, video, and ALPR.

H. The Federation feature shall support dozens of operator actions on remote (federated) entities from the Monitoring UI (for example, generating a global report taking into account events from multiple independent sites or acknowledging remote alarms).

2.23 USP ZONE MANAGEMENT

A. The USP shall support the configuration and management of zones for input point monitoring via the Zone Manager Role. A user shall be able to add, delete, or modify a zone if they have the appropriate privileges.

B. A zone shall monitor the status of one or more inputs points. Zone monitoring or input point monitoring shall be possible through the use of a controller and one or more input modules. Inputs from video cameras or video encoders shall also be accessible via a zone.

C. Depending on the hardware installed, supervised inputs shall be supported. Depending on the input module used, both 3-state and 4-state supervision shall be available.

D. A schedule shall be defined for a zone, indicating when the zone will be monitored.

E. Custom Events shall provide full flexibility in creating custom events tailored to a zone. Users shall be able to associate custom events to state changes in monitored inputs.

F. The ACS shall support one or more cameras per zone. Video shall then be associated to zone state changes.

G. Input/Output (IO) Linking:

1. Zone management shall support Input/Output (IO) Linking. I/O Linking shall allow one or more inputs to trigger one or more outputs.
2. IO Linking shall be available in offline mode when communication between the server and hardware is not available.
3. Custom Output Behaviors shall provide full flexibility in creating a variety of complex output signal patterns: simple pulses, periodic pulses, variable duty-cycle pulses, and state changes.
4. Through the “trigger an output” action, the ACS shall support the triggering of outputs with custom output behaviors.

2.24 USP USER AND USER GROUP SECURITY, PARTITIONS, AND PRIVILEGES MANAGEMENT

A. The USP shall support the configuration and management of users and user groups. A user shall be able to add, delete, or modify a user or user group if they have the appropriate privileges.

B. The USP shall support user authentication with claims-based authentication using external providers. External providers shall include:

1. ADFS (Active Directory Federation Services)
2. Azure Active Directory (through OpenID Connect)
3. Ping Identity (through OpenID Connect)
4. KeyCloak (through OpenID Connect)
5. Other Open ID Connect / SAML2 authentication agents

C. Common access rights and privileges shared by multiple users shall be defined as User Groups. Individual group members shall inherit the rights and privileges from their parent user groups. User group nesting shall be allowed.

D. User privileges shall be extensive in the USP. All configurable entities for the USP, including access control, video, and ALPR shall have associated privileges.

E. Specific entities, such as cardholders, cardholder groups, and credentials shall include a more granular set of privileges, such as the right to access custom fields and change the activation or profile status of an entity.

F. Partitions:

1. The USP shall limit what users can view in the configuration database via security partitions (database segments). The administrator, who has all rights and privileges, shall be allowed to segment a system into multiple security partitions.
2. All entities that are part of the USP can be assigned to one or more partitions.
3. A user who is given access to a specific partition shall only be able to view entities (components) within the partition to which they have been assigned. Access is given by assigning the user as an accepted user to view the entities that are members of a particular partition.
4. A user or user group can be assigned administrator rights over the partition.

G. It shall be possible to specify user and user group privileges on a per partition basis.

H. Advanced logon options shall be available such as dual logon and more.

I. It shall be possible to specify an inactive period for the Monitoring UI after which time the application shall automatically lock, while still preserving access to currently displayed camera feeds.

J. It shall be possible to review user permissions and determine:

1. For any entity in the system, which user group or user can view or modify it.

2. For any user group or user in the system, what are its privileges.

3. For any privilege in the system, which user group or user is allowed to perform the underlying action.

2.25 USP EVENT/ACTION MANAGEMENT

A. The USP shall support the configuration and management of events for video and ALPR. A user shall be able to add, delete, or modify an action tied to an event if he has the appropriate privileges.

B. The USP shall receive all incoming events from one or more ACS, VMS, and ALPR. The USP shall take the appropriate actions based on user-define event/action relationships.

C. The USP shall receive and log the following events:

1. System-wide events

2. Application events (clients and servers)

3. Area, camera, door, elevator, and ALPR events (reads and hits)

4. Unit events

5. Zone events

6. Alarm events

7. ALPR events

8. Health Monitoring events

D. The USP shall allow the creation of custom events.

E. The USP shall have the capability to execute an action in response to an access control, video, and ALPR event. The USP shall support the following list of actions, without being limited to:

1. Add bookmark

2. Block and unblock video

3. Display a camera on an analog monitor

4. Display an entity in the CSA

5. Email a report

6. Email a snapshot
7. Export report
8. Go home
9. Go to preset
10. Override recording quality
11. Play a sound
12. Reboot unit
13. Run a macro
14. Run a pattern
15. Send a message
16. Send an email
17. Set threat level
18. Start/Stop applying video protection
19. Start/Stop recording
20. Start/Stop transfer
21. Trigger alarm
22. Trigger output

F. The USP shall allow a schedule to be associated with an action. The action shall be executed only if it is an appropriate action for the current time period.

2.26 USP SCHEDULES AND SCHEDULED TASKS

A. Schedules

1. The USP shall support the configuration and management of complex schedules. A user shall be able to add, delete, or modify a schedule if they have the appropriate privileges.
2. The USP shall provide full flexibility and granularity in creating a schedule. The user shall be able to define a schedule in 1-minute or 15-minute increments.
3. Daily, weekly, ordinal, and specific schedules shall be supported.

B. Scheduled Tasks

1. The USP shall support scheduled tasks for video, and ALPR.
2. Scheduled tasks shall be executed on a user-defined schedule at a specific day and time. Recurring or periodic scheduled tasks shall also be supported.
3. Scheduled tasks shall support all standard actions available within the USP, such as sending an email or emailing a report.

2.27 USP MACROS AND CUSTOM SCRIPTS

A. The USP shall enable users to automate and extend the functionalities of the system through the use of macros or custom scripts for access control, video, and ALPR.

B. Custom macros shall be created with the USP Software Development Kit (SDK).

C. A macro shall be executed either automatically or manually.

D. In the Monitoring UI, a macro shall be launched through hot actions.

2.28 USP DYNAMIC GRAPHICAL MAPS (DGM)

A. The USP shall support mapping functionality for access control, video surveillance, intrusion detection, ALPR, and external applications.

B. The USP shall provide a map centric interface with the ability to command and control all the USP capabilities from a full screen map interface.

C. It shall be possible to span the map over all screens of the USP client station. In the scenario where the map is spanned over all the screens of the USP client station it shall be possible to navigate the map including pan and zoom, and the map's moves shall be synchronized between all screens. Spanning the map over multiple screens must provide the same command and control capabilities than in a single screen display.

D. The DGM shall support the following file format and protocol for importing map background:

1. PDF
2. JPG
3. PNG
4. Web Map Tile Service (WMTS) and Web Map Service (WMS) defined by the Open Geospatial Consortium (OGC)
5. BeNomad
6. AutoCAD (DWG & DXF)

E. The DGM shall provide the following online map providers for use as map background and provide the ability to manage their service license if they require one:

1. Google Map, aerial, terrain (Licensed)
2. Bing Map, aerial, satellite, hybrid (Licensed)
3. ESRI ArcGIS (Licensed)
4. OpenStreet Map aerial (Licensed)
5. OVI hybrid

F. It shall be possible to configure a mixed set of maps made of GIS, online providers, and private imported files and link them together.

G. The DGM shall provide the ability to display all native entities of the USP including:

1. Cameras, fix, and PTZ
2. Doors
3. Camera sequences
4. Areas
5. Intrusion areas
6. Intrusion zones
7. License Plate Recognition cameras
8. Digital inputs
9. Digital outputs
10. Intercoms
11. Alarms
12. Macros
13. Police Car Patrollers

H. The DGM shall provide the ability to draw and display information over the map in the form of:

1. Vectoral shapes: line, rectangles, polygons, ellipse
2. Pictures
3. Text

I. The DGM shall provide the ability to display any type of third party entities integrated through an SDK.

J. The DGM shall provide the ability to display layer of information in Keyhole Markup Language (KML) format.

K. The DGM shall provide the ability to the operator to manage layers of entities display over the map, being able to turn them on and off and changing the superposition order.

L. The DGM shall provide the ability to import data layers from one or more ESRI ArcGIS servers.

M. The DGM shall provide the operators with the ability to manage layers that are imported from ESRI ArcGIS. The operators shall be able to turn the layers on and off, as well as sort the layer.

N. The DGM shall offer built-in map data backup and restore for both map background and layers of entities.

O. The DGM shall provide the ability to import configurations from an external file such as:

1. AutoCAD layer for objects
2. CSV, Excel file

P. The DGM shall offer failover capabilities.

Q. The DGM shall scale up to several thousands of entities on a single map and hundreds of maps.

R. The DGM shall provide a means to update a map background without affecting the map object configuration.

S. The DGM shall offer a user-friendly graphical map designer to configure the maps.

T. The DGM shall provide a user friendly and intuitive navigation that includes:

1. The ability to create hierarchies of maps to facilitate navigation within and between various sites and buildings.
2. The ability to define favorites for recurrent position recall.
3. The possibility to create links between maps. The map links shall allow the link from one map to multiple maps representing the floors of a building. Navigating between floor of a building shall keep the zoom level of the map.
4. A common user experience regarding navigation into the map for both GIS and private maps

U. It shall be possible to monitor the state of entities on the map. It shall be possible to customize the icons of any entities represented on the map.

V. The DGM shall offer the ability to optionally set a graphical display notification of the motion detection.

W. The DGM shall offer a smart selection tool to access the video. By clicking the location the user wants to see, the DGM will automatically select the cameras that can see this location and move the PTZ towards that location. This smart selection tool shall take into consideration the obstacle and not display cameras that cannot see the location because of a wall.

X. It shall be possible to select a location by drawing a zone of interest on the DGM and display all the entities that are part of that zone of interest at once.

Y. The user shall be able to select and display the content of multiple USP entities on the map in popup windows.

Z. The user shall be able to move, resize, and pin the USP entity pop-up windows to the map.

AA. It shall be possible to access live and playback video from the map.

BB. It shall be possible to monitor from the DGM all entities event notification. User shall be able to turn on and off the notification per entity.

CC. The DGM shall offer the ability to fully operate alarm monitoring. It shall be possible to:

1. Center the map on entities related to the alarm.
2. Visualize the Alarms notification on the map and access the related video from the map.
3. Trigger and receive alarms.
4. Act on the alarm from the DGM, including acknowledgements, forwarding, and investigation.

5. Visualize that an alarm occurred in an underlying linked map.

DD. The DGM shall provide the following search capabilities:

1. Search and center by entity name.

2. From the Display of an entity in the USP, locate the entity on the map and offer the ability to select another one close-by.

3. By street address, city, landmark, point of interest (using geocoder license from Google, ESRI, or other provider).

EE. Any update of map content by an administrator shall be immediately and dynamically pushed to all DGM users.

FF. The DGM shall support the use of GIS maps, private maps, or a combination of both or map background.

GG. The DGM shall be compatible with any GIS compliant maps with the OGC and supporting WMTS and WMS. This includes, but is not limited to, ESRI maps. The DGM shall allow the selection of the appropriate GIS layers.

HH. The DGM shall provide an intuitive build-in map designer for entity positioning on the map using drag and drop. Any configuration shall be graphic.

II. It shall be possible to edit and configure multiple map objects at once.

JJ. All map design modifications shall be logged in an audit trail.

KK. Various actions shall be available within maps for execution through simple and intuitive double-click, right-click, or drag-and-drop functionality. Examples of actions available through maps shall include unlocking a door and acknowledging an alarm.

LL. Through the following functionalities, the DGM shall allow the management of USP alarms for the map:

1. Locate on the map entities related to the alarm.

2. Display entities of the alarm with a specific icon, color, transparency level, and blinking rate.

3. List, select, and locate alarms.

4. Auto center the map on the highest priority alarm.

5. Handle the alarm from the map, including acknowledgement, forwarding, and investigation.

6. All map containers, such as hotspots or map links, shall reflect the alarm status of the contained entities.

MM. It shall be possible to add advanced functionality to map objects using the SDK. Any functionality available through the USP SDK shall be available within maps.

NN. The DGM shall offer lasso tools for:

1. Displaying entities at one location through a single action.

2. Triggering an action on all entities at one location in a single click.

3. Editing multiple entities at one location simultaneously.

OO. The DGM shall allow the display of USP entities selected from the map on a remote monitor (video wall).

PP. The DGM shall provide the ability to search within the map by entity name.

QQ. The DGM shall allow the use of KML overlay map information for both GIS and private maps. Moveable objects shall be supported using KML.

RR. The Contractor shall provide licenses for each entity that is required to be shown on the graphical maps.

2.29 USP AUDIT AND USER ACTIVITY TRAILS (LOGS)

A. The USP shall support the generation of audit trails. Audit trails shall consist of logs of operator/administrator additions, deletions, and modifications.

B. Audit trails shall be generated as reports. They shall be able to track changes made within specific time periods. Querying on specific users, changes, affected entities, and time periods shall also be possible.

C. For entity configuration changes, the audit trail report shall include detailed information of the value before and after the changes.

D. The USP shall support the generation of user activity trails. User activity trails shall consist of logs of operator activity on the USP such as login, camera viewed, ALPR event viewed, badge printing, video export, and more.

E. The ACS shall support the following actions on an audit and activity trail report: print report and export report to a PDF/ Microsoft Excel/CSV file.

2.30 USP INCIDENT REPORTS

A. Incident reports shall allow the security operator to create reports on incidents that occurred during a shift. Both video-related and access control-related incident reports shall be supported.

B. The operator shall be able to create standalone incident reports or incident reports tied to alarms.

C. The operator shall be able to link multiple video sequences to an incident, access them in an incident report, and change the date or time of the sequences later on.

D. It shall be possible to create a list of Incident categories, tag a category to an incident, and filter the search with the category as a parameter.

E. Incident reports shall allow the creation of a custom form on which to input information on an incident.

F. Incident reports shall allow entities, events, and alarms to be added to support at the report's conclusions.

2.31 USP DATA INGESTION

A. The USP shall allow the possibility to import external data from outside sources to enhance unification of data sources within the USP.

B. Each data source shall be defined by a set of fields and field types that describe the data source. Field types shall be:

1. String
2. 32-bit & 64-bit integer
3. Floating point number
4. Boolean
5. Timestamp
6. Binary (in a file or base 64)

C. The visualization of each data point from a data source shall be configurable to determine what fields from the data should be displayed. The configuration of each field should be:

1. Which fields are displayed or hidden
2. What order are the fields displayed
3. A label to specify the name of the field (to have a key:value format)
4. An option to specify how to display the field (text value, image, clipboard value, hyperlink to a web page, hyperlink to an entity in the system, sound file)

D. A privilege should be available for each data source to allow / deny access to specific users and user groups of the USP.

E. Ingested data shall be available in the USP reporting system.

F. Ingested data shall be available to display in the USP Dashboards.

2.32 USP THIRD PARTY INTEGRATION

A. Microsoft Active Directory Integration

1. The USP shall support a direct connection to one or multiple Microsoft Active Directory server via the Active Directory Role(s). Active Directory integration shall enable the synchronization of information from the Active Directory server to the USP.
2. Active Directory integration shall permit the central management of the USP users, user groups, cardholders, and cardholder groups.
3. The USP shall be able to connect to and synchronize data from multiple Active Directory servers (up to 10).
4. The USP shall support synchronizing Active Directory Universal Groups as well as security groups belonging to other domains within the same forest.
5. The USP shall support Microsoft Active Directory encryption using LDAP SSL.

6. When enabled, Active Directory shall manage user logon to the USP client applications through the user's Windows credentials. Logging to the USP shall utilize native Active Directory password management and authentication features.

7. It shall be possible to synchronize the following USP entities and their information from Active Directory with the USP:

    a. Users (username, first and last names, email address, and more).

    b. User groups (user group name, description, and group email address).

    c. Active Directory attributes to USP custom fields.

8. When enabled, the addition, removal, or suspension of a user's Windows account in Active Directory shall result in the creation, deletion, or disabling of the equivalent user account in the USP.

9. Supported synchronization methods for additions, modification, and deletions of synchronized entities shall include on first logon (users only), manual synchronization, and scheduled synchronization.

10. The USP shall support user connections across independent organizations by connecting to an external identity provider using claims-based authentication such as ADFS (Active Directory Federation Services), Azure Active Directory, other OpenID Connect & SAML2 providers.

B. Intrusion Detection Integration

1. The USP shall integrate with third party intrusion panels and devices via an Intrusion SDK. The Intrusion Manager Role shall manage communications with the intrusion panels. Communications with intrusion devices shall be over serial communications and/or an IP network.

2. Integration with intrusion panels shall be possible outside the release cycle of the USP. It shall be possible to add new integrations at any point in time.

3. Functionality available via the integration of intrusion devices with the USP shall include the following (where supported by the intrusion panel):

    a. Arm and disarm intrusion devices (manually, on schedule, or following a USP event).

    b. Activate or trigger intrusion device outputs.

    c. View intrusion events and alarms.

    d. Monitor the status, including arming status, of the intrusion devices.

    e. Video verification of intrusion events and alarms with video panels.

    f. Create USP zones using intrusion device inputs.

4. Currently supported intrusion panels include:

    a. Bosch G Series panels

    b. Bosch Map 5000

    c. DSC Power Series panels

    d. DMP XR Series panels

e. Honeywell Galaxy Dimension and Flex panels

f. Vanderbilt SPC

g. UTC Advisor Master and Advanced

5. Additional Intrusion devices supported include:

a. Buytime

b. Alarm Panel Receiver

c. Southwest Microwave RPMII

C. Third Party Access Control Systems

1. The USP shall integrate with third party access control software via the SDK. Communications with access control software shall be over an IP network, and should not support administrative tasks such as cardholder management.

2. Integration with access control software shall be possible outside the release cycle of the USP. It shall be possible to add new integrations at any point in time.

3. Functionality available via the integration of access control software with the USP shall include the following (where supported by the access control solution):

a. Synchronize access control entities and receive associated events and states within the USP, including:

1) Cardholders and access rights

2) Visitors

3) Readers and doors

4) Alarms

5) Inputs and outputs

b. Monitor access control events.

c. Monitor and Acknowledge access control alarms.

d. Trigger actions and outputs in the access control software using hot actions and event-to-actions.

e. Lock and unlock doors in the access control software.

f. Video verification of access control events and alarms.

g. Configure event-to-actions using the access control events and alarms.

h. Generate Security Center reports using from the in the access control data.

i. View and monitor states of door entities in the USP maps.

4. Currently supported access control manufacturers include:

a. Tyco Softwarehouse CCURE

b. UTC Lenel Onguard

c. Amag Symmetry

d. Siemens Sipass

e. AssaAbloy ARX

D. Third Party Destination Dispatch Systems:

1. The USP shall integrate with third part destination dispatch (elevator control0 software via the SDK. Communications with the destination dispatch software shall be over an IP network.

2. Integration with destination dispatch software shall be possible outside the release cycle of the USP. It shall be possible to add new integrations at any point in time.

3. Functionality available via the integration of destination dispatch software with the USP shall include the following (where supported by the destination dispatch solution):

a. Destination dispatch entity creation and reception of associated events and states within the USP, including:

1) Floors and landings

2) Elevator cars (front/rear doors) and kiosks

3) Cardholders and credentials (if applicable)

b. Monitor destination dispatch events.

c. Trigger manual dispatch actions.

d. Video verification of destination dispatch events.

e. Configure event-to-actions using the destination dispatch events.

f. Generate Security Center reports using the destination dispatch data.

g. Support multiple readers:

1) Kiosk internal readers

2) USP readers

h. Kiosk advanced modes and passenger types.

4. Currently supported destination dispatch manufacturers include:

a. Otis Compass

b. Thyssenkrupp

c. Schindler

d. MCE

E. Asset Management Integration

1. The USP shall integrate with third party asset management systems via the Asset Management Role.

2. Communications with asset management solutions shall be over an IP network (via software communications).

3. Functionality available via the integration of asset management systems with the USP shall include the following (where supported by the asset management systems):
    a. Synchronize asset management system assets with USP asset entities.
    b. Live monitoring of asset-related activity events, health events, and activity (asset online, asset offline, asset moves, or low battery).
    c. Synchronization of asset management alarms with Security Center alarms.
    d. Viewing video tied to asset-related activity and alerts within monitoring and reporting tasks.
    e. Acknowledging alarms in Security Center which acknowledges alerts in the asset management system and vice versa.
    f. Real-time tracking of asset locations on a per area basis.
    g. Asset Management Inventory reporting task that details the current location (area) of an asset.
    h. Asset Activity reporting task that provides a historical review of asset-related events and activity.
4. Currently supported asset management systems include:
    a. Deister Key management
    b. Morsewatchmans
    c. TRAKA

F. Additional Third Party Integrations

1. The USP shall support multiple approaches to integrating third party systems. These shall include: Software Development Kits (SDKs), REST-based Web Service SDKs, RTSP Service SDKs, and more.
2. The USP architecture shall support the addition of new connectors to integrate to third party system integration, such as:
    a. Video analytics
    b. Third party video systems
    c. Third party access control systems
    d. ALPR integrations with pay stations, permit vendors, pay-by-phone vendors, and ticketing vendors
    e. Building management systems
    f. Access Control ecosystem (such as ID scanner, card synchronization, Guardtour, Morpho Biometrics)
    g. Transaction monitoring (POS, Barcode scanning, ATM)
    h. Industrial IoT (Modbus, BACnet, OPC, SNMP)
    i. Industrial Protocol Interface (BACnet, Modbus)

j. Videowall (Barco, Eizo)

k. Human resource management systems (HRMS)

l. Autonomous Drone Integration

m. Intelligent Keys (Salto SVN, Medeco XT, CLIQ)

n. Gunshot Detection (Shot Spotter, Guardian GunShot)

o. Dynamic Logbook

p. Facial Recognition Framework

q. Real-time Location Services - RTLS (HID)

2.33 USP SOFTWARE DEVELOPMENT KIT (SDK)

A. A USP SDK shall be available to support custom development for the platform.

B. The SDK shall include functionalities specific to the embedded automatic license plate recognition (ALPR), access control (ACS), and video (VMS) systems.

C. Integration with external applications and databases shall be possible with the SDK.

D. The SDK shall enable end-users to develop new functionality (user interface, standalone applications or services) to link the USP to third party business systems and applications, such as Badging Systems, Human Resources Management Systems (HRMS), and Enterprise Resource Planning (ERP) systems.

E. The SDK shall be based on the .NET framework.

F. The SDK shall support dynamic or transactional updates to the USP configuration. It shall also support change notification of USP entity configuration.

G. The SDK shall provide an extensive list of programming functions to view and/or configure core entities such as: users and user groups, alarms, custom events, and schedules, and more.

H. The SDK shall provide an extensive list of programming functions to view and configure ACS, VMS, and ALPR.

I. The SDK shall provide an extensive list of programming functions to view and configure most ACS entities such as: cardholders, cardholder groups, visitors, credentials, access rules (modify only), and custom fields.

J. The SDK shall be able to receive real time events from the following USP entities: users and user groups, areas, zones, cameras, video units, doors, door controllers (units), elevators, cardholders, cardholder groups, and credentials.

K. The SDK shall be able to query the history of events for areas, cameras, zones, alarms, cardholders, credentials, visitors, doors, query license plate read events, license plate hit events, generate a license plate hits report, generate a license plate reads report.

L. The SDK shall support the following alarm functions: view alarms in real time, acknowledge alarms, change priority, and change recipient.

PART 3 - EXECUTION

3.1 WARRANTY

A. The product shall perform in all material respects in accordance with the accompanying user manual, and the media on which the Software Product resides will be free from defects in materials and workmanship under normal use. Software defects are covered through Service Releases and Cumulative Updates which are available for a period of 1 year from the date of the software purchase.

B. Extended warranty, up to 5 years, shall be available through the purchase of a software maintenance agreement (SMA) which includes the following additional services over the standard warranty:

1. Access to phone support and online chat for technical assistance.
2. Online case management.
3. Online system availability monitor.
4. Access to Major and Minor Release Upgrades.
5. 24/7 pager support and dedicated support specialist.

3.2 DEPLOYMENT SERVICES AND SYSTEM COMMISSIONING

A. General Requirements

1. The contractor shall engage the services of the USP vendor to assist in the management of the deployment of the USP at the end-user site on projects that involve:
    a. Multiple contractors or subcontractors that will be responsible for deploying the USP at multiple client sites in different geographical regions.
    b. Complex enterprise installations involving advanced functionality (for example The Federation feature, failover, plugins) and/or multiple systems (for example access control, video, ALPR) and/or third party integrations.
    c. Extensive use of customized solutions/plugins developed by the vendor that will be integrated into the USP.
2. The USP vendor services shall include Deployment Management and System Configuration and Commissioning.

B. Deployment Management Service

1. The Deployment Management service from the vendor shall include a Project Manager acting as the single point of contact for all communications between the contractor and the vendor organization and who will be responsible for:
    a. Conducting a Risk Assessment of the impact of potential risk factors on the operation of the vendor's USP.
    b. Providing a project plan for the deployment of the vendor's USP.
    c. Managing the development and deployment of the custom solution components that will be integrated into the vendor's USP (if applicable).

d. Providing a scope of work detailing the services to be provided by the vendor to assist in the deployment of the vendor's USP.

e. Coordinating and scheduling the vendor field services with the contractor to assist with the deployment of the vendor's USP.

f. Providing regular project status updates to the contractor regarding the development of custom solutions (if applicable) and the deployment of the vendor's USP.

C. Solution Architect Service

1. The Solution Architect service from the vendor shall include a Solutions Architect Engineer acting as a single technical point of contact throughout the deployment of the USP, and who will be responsible for:

a. Assisting the contractor/subcontractor with the design and architecture of the vendor's USP.

b. Conducting technical consultation activities that may include fit/gap analysis, system design reviews, device compatibility assessments, functional and technical design reviews as well as performance reviews of the vendor's USP.

c. Conducting a system assessment and ensuring best practices of the vendor's USP are followed.

d. Providing upgrade and migration strategy for the vendor's USP where applicable.

e. Providing documentation regarding the system architecture, system design, hardware specifications and compatibility requirements, camera bandwidth calculations, and best practices as they relate to the vendor's USP.

D. System Configuration and Commissioning Service

1. The System Configuration and Commissioning service from the vendor shall include a Field Engineer who will be responsible for:

a. Assisting the contractor's or subcontractor's onsite/remote technicians with the configuration and commissioning of the vendor's USP at the client site.

b. Conducting a test of the USP following the deployment of the system using real-world operator scenarios to ensure optimal system performance.

c. Providing the contractor with a Service Report detailing the tasks completed during the deployment of the USP at the client site, as well as any recommendations for improving the performance of the USP that must be implemented by the contractor.

d. Providing a knowledge transfer of the vendor's USP to the contractor following the deployment of the USP at the client site.

3.3 MANUFACTURER END USER OPERATOR TRAINING

A. The contractor shall engage the services of the USP vendor to assist in the end user training of the USP at the end-user site.

END OF SECTION

PROJECT MANUAL FOR CONSTRUCTION OF

SUPREME COURT OF MARYLAND

Rowe Boulevard
Annapolis, MD
Anne Arundel County
DGS Project #BA-688-200-001
Project Classification H

PROJECT SPECIFICATIONS

END OF TABLE OF CONTENTS

SECTION 31 10 00 - SITE CLEARING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Protecting existing vegetation to remain.
2. Removing existing vegetation.
3. Clearing and grubbing.
4. Stripping and stockpiling topsoil.
5. Stripping and stockpiling rock.
6. Removing above- and below-grade site improvements.
7. Disconnecting, capping or sealing, and removing site utilities.
8. Temporary erosion and sedimentation control.

B. Related Requirements:

1. Section 015000 "Temporary Facilities and Controls" for temporary erosion- and sedimentation-control measures.

C. Related Requirements:

1. Section 01500 "Temporary Facilities and Controls" for temporary erosion- and sedimentation-control measures.

1.3 DEFINITIONS

A. Subsoil: Soil beneath the level of subgrade; soil beneath the topsoil layers of a naturally occurring soil profile, typified by less than 1 percent organic matter and few soil organisms.

B. Surface Soil: Soil that is present at the top layer of the existing soil profile. In undisturbed areas, surface soil is typically called "topsoil," but in disturbed areas such as urban environments, the surface soil can be subsoil.

C. Topsoil: Top layer of the soil profile consisting of existing native surface topsoil or existing in-place surface soil; the zone where plant roots grow.

D. Plant-Protection Zone: Area surrounding individual trees, groups of trees, shrubs, or other vegetation to be protected during construction and indicated on Drawings.

E. Tree-Protection Zone: Area surrounding individual trees or groups of trees to be protected during construction and indicated on Drawings.

F. Vegetation: Trees, shrubs, groundcovers, grass, and other plants.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 MATERIAL OWNERSHIP

A. Except for materials indicated to be stockpiled or otherwise remain Owner's property, cleared materials shall become Contractor's property and shall be removed from Project site.

1.6 INFORMATIONAL SUBMITTALS

A. Existing Conditions: Documentation of existing trees and plantings, adjoining construction, and site improvements that establishes preconstruction conditions that might be misconstrued as damage caused by site clearing.

1. Use sufficiently detailed photographs or video recordings.
2. Include plans and notations to indicate specific wounds and damage conditions of each tree or other plant designated to remain.

B. Topsoil stripping and stockpiling program.

C. Record Drawings: Identifying and accurately showing locations of capped utilities and other subsurface structural, electrical, and mechanical conditions.

1.7 QUALITY ASSURANCE

A. Topsoil Stripping and Stockpiling Program: Prepare a written program to systematically demonstrate the ability of personnel to properly follow procedures and handle materials and equipment during the Work. Include dimensioned diagrams for placement and protection of stockpiles.

1.8 FIELD CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during site-clearing operations.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
2. Provide alternate routes around closed or obstructed trafficways if required by Owner or authorities having jurisdiction.

B. Improvements on Adjoining Property: Authority for performing site clearing indicated on property adjoining Owner's property will be obtained by Owner before award of Contract.

1. Do not proceed with work on adjoining property until directed by Architect.

C. Salvageable Improvements: Carefully remove items indicated to be salvaged and store on Owner's premises.

D. Utility Locator Service: Notify utility locator service for area where Project is located before site clearing.

E. Do not commence site clearing operations until temporary erosion- and sedimentation-control and plant-protection measures are in place.

F. Tree- and Plant-Protection Zones: Protect according to requirements in Section 015639 "Temporary Tree and Plant Protection."

G. Soil Stripping, Handling, and Stockpiling: Perform only when the soil is dry or slightly moist.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Satisfactory Soil Material: Requirements for satisfactory soil material are specified in Section 312000 "Earth Moving."

1. Obtain approved borrow soil material off-site when satisfactory soil material is not available on-site.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect and maintain benchmarks and survey control points from disturbance during construction.

B. Verify that trees, shrubs, and other vegetation to remain or to be relocated have been flagged and that protection zones have been identified and enclosed according to requirements in Section 015639 "Temporary Tree and Plant Protection."

C. Protect existing site improvements to remain from damage during construction.

1. Restore damaged improvements to their original condition, as acceptable to Owner.

3.2 TEMPORARY EROSION AND SEDIMENTATION CONTROL

A. Provide temporary erosion- and sedimentation-control measures to prevent soil erosion and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways, according to erosion- and sedimentation-control Drawings and requirements of authorities having jurisdiction.

B. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross protection zones.

C. Inspect, maintain, and repair erosion- and sedimentation-control measures during construction until permanent vegetation has been established.

D. Remove erosion and sedimentation controls, and restore and stabilize areas disturbed during removal.

3.3 TREE AND PLANT PROTECTION

A. Protect trees and plants remaining on-site according to requirements in Section 015639 "Temporary Tree and Plant Protection."

B. Repair or replace trees, shrubs, and other vegetation indicated to remain or be relocated that are damaged by construction operations according to requirements in Section 015639 "Temporary Tree and Plant Protection."

3.4 EXISTING UTILITIES

A. Owner will arrange for disconnecting and sealing indicated utilities that serve existing structures before site clearing, when requested by Contractor.

1. Verify that utilities have been disconnected and capped before proceeding with site clearing.

B. Locate, identify, disconnect, and seal or cap utilities indicated to be removed.

1. Arrange with utility companies to shut off indicated utilities.

C. Interrupting Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others, unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:

1. Notify Architect not less than seven days in advance of proposed utility interruptions.
2. Do not proceed with utility interruptions without Architect's written permission.

3.5 CLEARING AND GRUBBING

A. Remove obstructions, trees, shrubs, and other vegetation to permit installation of new construction.

1. Do not remove trees, shrubs, and other vegetation indicated to remain or to be relocated.
2. Grind down stumps and remove roots larger than 2 inches in diameter, obstructions, and debris to a depth of 18 inches below exposed subgrade.
3. Use only hand methods or air spade for grubbing within protection zones.
4. Chip removed tree branches and dispose of off-site.

B. Fill depressions caused by clearing and grubbing operations with satisfactory soil material unless further excavation or earthwork is indicated.

1. Place fill material in horizontal layers not exceeding a loose depth of 8 inches, and compact each layer to a density equal to adjacent original ground.

3.6 TOPSOIL STRIPPING

A. Remove sod and grass before stripping topsoil.

B. Strip topsoil to depth of 6 inches in a manner to prevent intermingling with underlying subsoil or other waste materials.

1. Remove subsoil and nonsoil materials from topsoil, including clay lumps, gravel, and other objects larger than 2 inches in diameter; trash, debris, weeds, roots, and other waste materials.

C. Stockpile topsoil away from edge of excavations without intermixing with subsoil or other materials. Grade and shape stockpiles to drain surface water. Cover to prevent windblown dust and erosion by water.

1. Limit height of topsoil stockpiles to 72 inches.
2. Do not stockpile topsoil within protection zones.
3. Dispose of surplus topsoil. Surplus topsoil is that which exceeds quantity indicated to be stockpiled or reused.

3.7 STOCKPILING ROCK

A. Remove from construction area naturally formed rocks that measure more than 1 foot across in least dimension. Do not include excavated or crushed rock.

B. Stockpile rock away from edge of excavations without intermixing with other materials. Cover to prevent windblown debris from accumulating among rocks.

1. Limit height of rock stockpiles to 36 inches.
2. Do not stockpile rock within protection zones.
3. Dispose of surplus rock. Surplus rock is that which exceeds quantity indicated to be stockpiled or reused.

3.8 SITE IMPROVEMENTS

A. Remove existing above- and below-grade improvements as indicated and necessary to facilitate new construction.

B. Remove slabs, paving, curbs, gutters, and aggregate base as indicated.

1. Unless existing full-depth joints coincide with line of demolition, neatly saw-cut along line of existing pavement to remain before removing adjacent existing pavement. Saw-cut faces vertically.
2. Paint cut ends of steel reinforcement in concrete to remain with two coats of antirust coating, following coating manufacturer's written instructions. Keep paint off surfaces that will remain exposed.

3.9 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Remove surplus soil material, unsuitable topsoil, obstructions, demolished materials, and waste materials including trash and debris, and legally dispose of them off Owner's property.

B. Burning tree, shrub, and other vegetation waste is permitted according to burning requirements and permitting of authorities having jurisdiction. Control such burning to produce the least smoke or air pollutants and minimum annoyance to surrounding properties. Burning of other waste and debris is prohibited.

C. Separate recyclable materials produced during site clearing from other nonrecyclable materials. Store or stockpile without intermixing with other materials, and transport them to recycling facilities. Do not interfere with other Project work.

END OF SECTION

SECTION 31 20 00 - EARTH MOVING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Excavating and filling for rough grading the Site.
2. Preparing subgrades for walks, pavements, turf and grasses, and plants.
3. Excavating and backfilling for buildings and structures.
4. Drainage course for concrete slabs-on-grade.
5. Subbase course for concrete walks and pavements.
6. Subbase course and base course for asphalt paving.
7. Subsurface drainage backfill for walls and trenches.
8. Excavating and backfilling trenches for utilities and pits for buried utility structures.
9. Excavating well hole to accommodate elevator-cylinder assembly.

B. Related Requirements:

1. Section 013200 "Construction Progress Documentation" for recording pre-excavation and earth-moving progress.
2. Section 311000 "Site Clearing" for site stripping, grubbing, stripping and stockpiling topsoil, and removal of above- and below-grade improvements and utilities.
3. Section 329200 "Turf and Grasses" for finish grading in turf and grass areas, including preparing and placing planting soil for turf areas.
4. Section 329300 "Plants" for finish grading in planting areas and tree and shrub pit excavation and planting.

1.2 UNIT PRICES

A. Work of this Section is affected by unit prices for earth moving specified in Section 012200 "Unit Prices."

B. Quantity allowances for earth moving are included in Section 012100 "Allowances."

C. Rock Measurement: Volume of rock actually removed, measured in original position, but not to exceed the following. Unit prices for rock excavation include replacement with approved materials.

1. 24 inches outside of concrete forms other than at footings.
2. 12 inches outside of concrete forms at footings.
3. 6 inches outside of minimum required dimensions of concrete cast against grade.
4. Outside dimensions of concrete walls indicated to be cast against rock without forms or exterior waterproofing treatments.
5. 6 inches beneath bottom of concrete slabs-on-grade.
6. 6 inches beneath pipe in trenches, and the greater of 24 inches wider than pipe or 42 inches wide.

1.3 DEFINITIONS

A. Backfill: Soil material or controlled low-strength material used to fill an excavation.

1. Initial Backfill: Backfill placed beside and over pipe in a trench, including haunches to support sides of pipe.
2. Final Backfill: Backfill placed over initial backfill to fill a trench.

B. Base Course: Aggregate layer placed between the subbase course and hot-mix asphalt paving.

C. Bedding Course: Aggregate layer placed over the excavated subgrade in a trench before laying pipe.

D. Borrow Soil: Satisfactory soil imported from off-site for use as fill or backfill.

E. Drainage Course: Aggregate layer supporting the slab-on-grade that also minimizes upward capillary flow of pore water.

F. Excavation: Removal of material encountered above subgrade elevations and to lines and dimensions indicated.

1. Authorized Additional Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions as directed by Architect. Authorized additional excavation and replacement material will be paid for according to Contract provisions for unit prices.
2. Bulk Excavation: Excavation more than 10 feet in width and more than 30 feet in length.
3. Unauthorized Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions without direction by Architect. Unauthorized excavation, as well as remedial work directed by Architect, will be without additional compensation.

G. Fill: Soil materials used to raise existing grades.

H. Rock:

1. Rock material in beds, ledges, unstratified masses, conglomerate deposits, and boulders of rock material 3/4 cu. yd or more in volume that exceed a standard penetration resistance of 100 blows/2 inches when tested by a geotechnical testing agency, according to ASTM D1586.

I. Structures: Buildings, footings, foundations, retaining walls, slabs, tanks, curbs, mechanical and electrical appurtenances, or other fabricated stationary features constructed above or below the ground surface.

J. Subbase Course: Aggregate layer placed between the subgrade and base course for hot-mix asphalt pavement, or aggregate layer placed between the subgrade and a cement concrete pavement or a cement concrete or hot-mix asphalt walk.

K. Subgrade: Uppermost surface of an excavation or the top surface of a fill or backfill immediately below subbase, drainage fill, drainage course, or topsoil materials.

L. Utilities: On-site underground pipes, conduits, ducts, and cables as well as underground services within buildings.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct pre-excavation conference at Project site.

1. Review methods and procedures related to earthmoving, including, but not limited to, the following:

a. Personnel and equipment needed to make progress and avoid delays.
b. Coordination of Work with utility locator service.
c. Coordination of Work and equipment movement with the locations of tree- and plant-protection zones.
d. Extent of trenching by hand or with air spade.
e. Field quality control.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of the following manufactured products required:

1. Geotextiles.
2. Warning tapes.

B. Samples for Verification: For the following products, in sizes indicated below:

1. Geotextile: 12 by 12 inches.
2. Warning Tape: 12 inches long; of each color.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified testing agency.

B. Material Test Reports: For each on-site and borrow soil material proposed for fill and backfill as follows:

1. Classification according to ASTM D2487.
2. Laboratory compaction curve according to ASTM D698.

C. Pre-excavation Photographs or Videotape: Show existing conditions of adjoining construction and site improvements, including finish surfaces that might be misconstrued as damage caused by earth-moving operations. Submit before earth moving begins.

1.7 QUALITY ASSURANCE

A. Geotechnical Testing Agency Qualifications: Qualified according to ASTM E329 and ASTM D3740 for testing indicated.

1.8 FIELD CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during earth-moving operations.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
2. Provide alternate routes around closed or obstructed traffic ways if required by Owner or authorities having jurisdiction.

B. Improvements on Adjoining Property: Authority for performing earth moving indicated on property adjoining Owner's property will be obtained by Owner before award of Contract.

1. Do not proceed with work on adjoining property until directed by Architect.

C. Utility Locator Service: Notify "Miss Utility" for area where Project is located before beginning earth-moving operations.

D. Do not commence earth-moving operations until temporary site fencing and erosion- and sedimentation-control measures specified in Section 015000 "Temporary Facilities and Controls" and Section 311000 "Site Clearing" are in place.

E. Do not commence earth-moving operations until plant-protection measures specified in Section 015639 "Temporary Tree and Plant Protection" are in place.

F. The following practices are prohibited within protection zones:

1. Storage of construction materials, debris, or excavated material.
2. Parking vehicles or equipment.
3. Foot traffic.
4. Erection of sheds or structures.
5. Impoundment of water.
6. Excavation or other digging unless otherwise indicated.
7. Attachment of signs to or wrapping materials around trees or plants unless otherwise indicated.

G. Do not direct vehicle or equipment exhaust towards protection zones.

H. Prohibit heat sources, flames, ignition sources, and smoking within or near protection zones.

PART 2 - PRODUCTS

2.1 SOIL MATERIALS

A. General: Provide borrow soil materials when sufficient satisfactory soil materials are not available from excavations.

B. Satisfactory Soils: Soil Classification Groups GW, GP, GM, SW, SP, and SM according to ASTM D2487, or a combination of these groups; free of rock or gravel larger than 3 inches in any dimension, debris, waste, frozen materials, vegetation, and other deleterious matter.

1. Liquid Limit: 30.
2. Plasticity Index: 15.

C. Unsatisfactory Soils: Soil Classification Groups GC, SC, CL, ML, OL, CH, MH, OH, and PT according to ASTM D2487, or a combination of these groups.

1. Unsatisfactory soils also include satisfactory soils not maintained within 2 percent of optimum moisture content at time of compaction.

D. Subbase Material: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; with at least 90 percent passing a 1-1/2-inch sieve and not more than 12 percent passing a No. 200 sieve.

E. Base Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; with at least 95 percent passing a 1-1/2-inch sieve and not more than 8 percent passing a No. 200 sieve.

F. Engineered Fill: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; with at least 90 percent passing a 1-1/2-inch sieve and not more than 12 percent passing a No. 200 sieve.

G. Bedding Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; except with 100 percent passing a 1-inch sieve and not more than 8 percent passing a No. 200 sieve.

H. Drainage Course: Narrowly graded mixture of washed, crushed stone, or crushed or uncrushed gravel; ASTM D448; coarse-aggregate grading Size 57; with 100 percent passing a 1-1/2-inch sieve and zero to 5 percent passing a No. 8 sieve.

I. Filter Material: Narrowly graded mixture of natural or crushed gravel, or crushed stone and natural sand; ASTM D448; coarse-aggregate grading Size 67; with 100 percent passing a 1-inch sieve and zero to 5 percent passing a No. 4 sieve.

J. Sand: ASTM C33/C33M; fine aggregate.

K. Impervious Fill: Clayey gravel and sand mixture capable of compacting to a dense state.

2.2 GEOTEXTILES

A. Subsurface Drainage Geotextile: Nonwoven needle-punched geotextile, manufactured for subsurface drainage applications, made from polyolefins or polyesters; with elongation greater than 50 percent; complying with AASHTO M 288 and the following, measured per test methods referenced:

1. Survivability:

a. Class 2; AASHTO M 288.
b. As follows:

1) Grab Tensile Strength: 200 lbf; ASTM D4632.
2) Tear Strength: 80 lbf; ASTM D4533.
3) Puncture Strength: 450 lbf; ASTM D4833.

c. Apparent Opening Size: No. 70 sieve, maximum; ASTM D4751.
d. Permittivity: 1.1] per second, minimum; ASTM D4491.
e. UV Stability: 70 percent after 500 hours' exposure; ASTM D4355.

B. Separation Geotextile: Woven geotextile fabric, manufactured for separation applications, made from polyolefins or polyesters; with elongation less than 50 percent; complying with AASHTO M 288 and the following, measured per test methods referenced:

1. Survivability:

    a. Class 2; AASHTO M 288.
    b. As follows:

        1) Grab Tensile Strength: 200 lbf; ASTM D4632.
        2) Tear Strength: 75 lbf; ASTM D4533.
        3) Puncture Strength: 450 lbf; ASTM D4833.

    c. Apparent Opening Size: No. 30 sieve, maximum; ASTM D4751.
    d. Permittivity: 0.05 per second, minimum; ASTM D4491.
    e. UV Stability: 70 percent after 500 hours' exposure; ASTM D4355.

2.3 ACCESSORIES

A. Warning Tape: Acid- and alkali-resistant, polyethylene film warning tape manufactured for marking and identifying underground utilities, 6 inches wide and 4 mils thick, continuously inscribed with a description of the utility; colored as follows:

1. Red: Electric.
2. Yellow: Gas, oil, steam, and dangerous materials.
3. Orange: Telephone and other communications.
4. Blue: Water systems.
5. Green: Sewer systems.

B. Detectable Warning Tape: Acid- and alkali-resistant, polyethylene film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches wide and 4 mils thick, continuously inscribed with a description of the utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches deep; colored as follows:

1. Red: Electric.
2. Yellow: Gas, oil, steam, and dangerous materials.
3. Orange: Telephone and other communications.
4. Blue: Water systems.
5. Green: Sewer systems.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by earth-moving operations.

B. Protect and maintain erosion and sedimentation controls during earth-moving operations.

C. Protect subgrades and foundation soils from freezing temperatures and frost. Remove temporary protection before placing subsequent materials.

3.2 DEWATERING

A. Provide dewatering system of sufficient scope, size, and capacity to control hydrostatic pressures and to lower, control, remove, and dispose of ground water and permit excavation and construction to proceed on dry, stable subgrades.

B. Prevent surface water and ground water from entering excavations, from ponding on prepared subgrades, and from flooding Project site and surrounding area.

C. Protect subgrades from softening, undermining, washout, and damage by rain or water accumulation.

1. Reroute surface water runoff away from excavated areas. Do not allow water to accumulate in excavations. Do not use excavated trenches as temporary drainage ditches.

D. Dispose of water removed by dewatering in a manner that avoids endangering public health, property, and portions of work under construction or completed. Dispose of water and sediment in a manner that avoids inconvenience to others.

3.3 EXPLOSIVES

A. Explosives:

1. Do not use explosives.

3.4 EXCAVATION, GENERAL

A. Unclassified Excavation: Excavate to subgrade elevations regardless of the character of surface and subsurface conditions encountered. Unclassified excavated materials may include rock, soil materials, and obstructions. No changes in the Contract Sum or the Contract Time will be authorized for rock excavation or removal of obstructions.

1. If excavated materials intended for fill and backfill include unsatisfactory soil materials and rock, replace with satisfactory soil materials.
2. Remove rock to lines and grades indicated to permit installation of permanent construction without exceeding the following dimensions:

a. 24 inches outside of concrete forms other than at footings.
b. 12 inches outside of concrete forms at footings.
c. 6 inches outside of minimum required dimensions of concrete cast against grade.
d. Outside dimensions of concrete walls indicated to be cast against rock without forms or exterior waterproofing treatments.
e. 6 inches beneath bottom of concrete slabs-on-grade.
f. 6 inches beneath pipe in trenches and the greater of 24 inches wider than pipe or 42 inches wide.

B. Classified Excavation: Excavate to subgrade elevations. Material to be excavated will be classified as earth and rock. Do not excavate rock until it has been classified and cross sectioned by Architect. The Contract Sum will be adjusted for rock excavation according to unit prices included in the Contract Documents. Changes in the Contract Time may be authorized for rock excavation.

1. Earth excavation includes excavating pavements and obstructions visible on surface; underground structures, utilities, and other items indicated to be removed; and soil, boulders, and other materials not classified as rock or unauthorized excavation.

    a. Intermittent drilling; blasting, if permitted; ram hammering; or ripping of material not classified as rock excavation is earth excavation.

2. Rock excavation includes removal and disposal of rock. Remove rock to lines and subgrade elevations indicated to permit installation of permanent construction without exceeding the following dimensions:

    a. 24 inches outside of concrete forms other than at footings.
    b. 12 inches outside of concrete forms at footings.
    c. 6 inches outside of minimum required dimensions of concrete cast against grade.
    d. Outside dimensions of concrete walls indicated to be cast against rock without forms or exterior waterproofing treatments.
    e. 6 inches beneath bottom of concrete slabs-on-grade.
    f. 6 inches beneath pipe in trenches and the greater of 24 inches wider than pipe or 42 inches wide.

3.5 EXCAVATION FOR STRUCTURES

A. Excavate to indicated elevations and dimensions within a tolerance of plus or minus 1 inch. If applicable, extend excavations a sufficient distance from structures for placing and removing concrete formwork, for installing services and other construction, and for inspections.

1. Excavations for Footings and Foundations: Do not disturb bottom of excavation. Excavate by hand to final grade just before placing concrete reinforcement. Trim bottoms to required lines and grades to leave solid base to receive other work.

B. Excavations at Edges of Tree- and Plant-Protection Zones:

1. Excavate by hand or with an air spade to indicated lines, cross sections, elevations, and subgrades. If excavating by hand, use narrow-tine spading forks to comb soil and expose roots. Do not break, tear, or chop exposed roots. Do not use mechanical equipment that rips, tears, or pulls roots.
2. Cut and protect roots according to requirements in Section 015639 "Temporary Tree and Plant Protection."

3.6 EXCAVATION FOR WALKS AND PAVEMENTS

A. Excavate surfaces under walks and pavements to indicated lines, cross sections, elevations, and subgrades.

3.7 EXCAVATION FOR UTILITY TRENCHES

A. Excavate trenches to indicated gradients, lines, depths, and elevations.

1. Beyond building perimeter, excavate trenches to allow installation of top of pipe below frost line.

B. Excavate trenches to uniform widths to provide the following clearance on each side of pipe or conduit. Excavate trench walls vertically from trench bottom to 12 inches higher than top of pipe or conduit unless otherwise indicated.

1. Clearance: 12 inches each side of pipe or conduit.

C. Trench Bottoms:

1. Excavate trenches 4 inches deeper than bottom of pipe and conduit elevations to allow for bedding course. Hand-excavate deeper for bells of pipe.

a. Excavate trenches 6 inches deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.

D. Trenches in Tree- and Plant-Protection Zones:

1. Hand-excavate to indicated lines, cross sections, elevations, and subgrades. Use narrow-tine spading forks to comb soil and expose roots. Do not break, tear, or chop exposed roots. Do not use mechanical equipment that rips, tears, or pulls roots.
2. Do not cut main lateral roots or taproots; cut only smaller roots that interfere with installation of utilities.
3. Cut and protect roots according to requirements in Section 015639 "Temporary Tree and Plant Protection."

3.8 EXCAVATION FOR ELEVATOR CYLINDER

A. Drill well hole plumb in elevator pit to accommodate installation of elevator-cylinder assembly. Coordinate with applicable requirements for diameter and tolerances in Section 142400 "Hydraulic Elevators."

B. Provide well casing as necessary to retain walls of well hole.

3.9 SUBGRADE INSPECTION

A. Notify Architect when excavations have reached required subgrade.

B. If Architect determines that unsatisfactory soil is present, continue excavation and replace with compacted backfill or fill material as directed.

C. Proof-roll subgrade below the building slabs and pavements with a pneumatic-tired and loaded 10-wheel, tandem-axle dump truck weighing not less than 15 tons to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades.

1. Completely proof-roll subgrade in one direction, repeating proof-rolling in direction perpendicular to first direction. Limit vehicle speed to 3 mph.
2. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by Architect, and replace with compacted backfill or fill as directed.

D. Authorized additional excavation and replacement material will be paid for according to Contract provisions for unit prices.

E. Reconstruct subgrades damaged by freezing temperatures, frost, rain, accumulated water, or construction activities, as directed by Architect, without additional compensation.

3.10 UNAUTHORIZED EXCAVATION

A. Fill unauthorized excavation under foundations or wall footings by extending bottom elevation of concrete foundation or footing to excavation bottom, without altering top elevation. Lean concrete fill, with 28-day compressive strength of 2500 psi, may be used when approved by Architect.

1. Fill unauthorized excavations under other construction, pipe, or conduit as directed by Architect.

3.11 STORAGE OF SOIL MATERIALS

A. Stockpile borrow soil materials and excavated satisfactory soil materials without intermixing. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.

1. Stockpile soil materials away from edge of excavations. Do not store within drip line of remaining trees.

3.12 BACKFILL

A. Place and compact backfill in excavations promptly, but not before completing the following:

1. Construction below finish grade including, where applicable, subdrainage, dampproofing, waterproofing, and perimeter insulation.
2. Surveying locations of underground utilities for Record Documents.
3. Testing and inspecting underground utilities.
4. Removing concrete formwork.
5. Removing trash and debris.
6. Removing temporary shoring, bracing, and sheeting.
7. Installing permanent or temporary horizontal bracing on horizontally supported walls.

B. Place backfill on subgrades free of mud, frost, snow, or ice.

3.13 UTILITY TRENCH BACKFILL

A. Place backfill on subgrades free of mud, frost, snow, or ice.

B. Place and compact bedding course on trench bottoms and where indicated. Shape bedding course to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits.

C. Trenches under Footings: Backfill trenches excavated under footings and within 18 inches of bottom of footings with satisfactory soil; fill with concrete to elevation of bottom of footings. Concrete is specified in Section 033000 "Cast-in-Place Concrete."

D. Trenches under Roadways: Provide 4-inch-thick, concrete-base slab support for piping or conduit less than 30 inches below surface of roadways. After installing and testing, completely encase piping or conduit in a minimum of 4 inches of concrete before backfilling or placing roadway subbase course. Concrete is specified in Section 033000 "Cast-in-Place Concrete."

E. Backfill voids with satisfactory soil while removing shoring and bracing.

F. Initial Backfill:

1. Soil Backfill: Place and compact initial backfill of satisfactory soil, free of particles larger than 1 inch in any dimension, to a height of 12 inches over the pipe or conduit.

a. Carefully compact initial backfill under pipe haunches and compact evenly up on both sides and along the full length of piping or conduit to avoid damage or displacement of piping or conduit. Coordinate backfilling with utilities testing.

G. Final Backfill:

1. Soil Backfill: Place and compact final backfill of satisfactory soil to final subgrade elevation.

H. Warning Tape: Install warning tape directly above utilities, 12 inches below finished grade, except 6 inches below subgrade under pavements and slabs.

3.14 SOIL FILL

A. Plow, scarify, bench, or break up sloped surfaces steeper than 1 vertical to 4 horizontal so fill material will bond with existing material.

B. Place and compact fill material in layers to required elevations as follows:

1. Under grass and planted areas, use satisfactory soil material.
2. Under walks and pavements, use satisfactory soil material.
3. Under steps and ramps, use engineered fill.
4. Under building slabs, use engineered fill.
5. Under footings and foundations, use engineered fill.

C. Place soil fill on subgrades free of mud, frost, snow, or ice.

3.15 SOIL MOISTURE CONTROL

A. Uniformly moisten or aerate subgrade and each subsequent fill or backfill soil layer before compaction to within 2 percent of optimum moisture content.

1. Do not place backfill or fill soil material on surfaces that are muddy, frozen, or contain frost or ice.
2. Remove and replace, or scarify and air dry, otherwise satisfactory soil material that exceeds optimum moisture content by 2 percent and is too wet to compact to specified dry unit weight.

3.16 COMPACTION OF SOIL BACKFILLS AND FILLS

A. Place backfill and fill soil materials in layers not more than 8 inches in loose depth for material compacted by heavy compaction equipment and not more than 4 inches in loose depth for material compacted by hand-operated tampers.

B. Place backfill and fill soil materials evenly on all sides of structures to required elevations and uniformly along the full length of each structure.

C. Compact soil materials to not less than the following percentages of maximum dry unit weight according to ASTM D698:

1. Under structures, building slabs, steps, and pavements, scarify and recompact top 12 inches of existing subgrade and each layer of backfill or fill soil material at 95 percent.
2. Under walkways, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill soil material at 92 percent.
3. Under turf or unpaved areas, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill soil material at 85 percent.
4. For utility trenches, compact each layer of initial and final backfill soil material at 85 percent.

3.17 GRADING

A. General: Uniformly grade areas to a smooth surface, free of irregular surface changes. Comply with compaction requirements and grade to cross sections, lines, and elevations indicated.

1. Provide a smooth transition between adjacent existing grades and new grades.
2. Cut out soft spots, fill low spots, and trim high spots to comply with required surface tolerances.

B. Site Rough Grading: Slope grades to direct water away from buildings and to prevent ponding. Finish subgrades to elevations required to achieve indicated finish elevations, within the following subgrade tolerances:

1. Turf or Unpaved Areas: Plus or minus 1 inch.
2. Walks: Plus or minus 1 inch.
3. Pavements: Plus or minus 1/2 inch.

C. Grading inside Building Lines: Finish subgrade to a tolerance of 1/2 inch when tested with a 10-foot straightedge.

3.18 SUBSURFACE DRAINAGE

.

A. Subsurface Drain: Place subsurface drainage geotextile around perimeter of subdrainage trench. Place a 6-inch course of filter material on subsurface drainage geotextile to support subdrainage pipe. Encase subdrainage pipe in a minimum of 12 inches of filter material, placed in compacted layers 6 inches thick, and wrap in subsurface drainage geotextile, overlapping sides and ends at least 6 inches.

1. Compact each filter material layer with a minimum of two passes of a plate-type vibratory compactor.

B. Drainage Backfill: Place and compact filter material over subsurface drain, in width indicated, to within 12 inches of final subgrade, in compacted layers 6 inches thick. Overlay drainage backfill with one layer of subsurface drainage geotextile, overlapping sides and ends at least 6 inches.

1. Compact each filter material layer with a minimum of two passes of a plate-type vibratory compactor.
2. Place and compact impervious fill over drainage backfill in 6-inch- thick compacted layers to final subgrade.

3.19 SUBBASE AND BASE COURSES UNDER PAVEMENTS AND WALKS

A. Place subbase course and base course on subgrades free of mud, frost, snow, or ice.

B. On prepared subgrade, place subbase course and base course under pavements and walks as follows:

1. Install separation geotextile on prepared subgrade according to manufacturer's written instructions, overlapping sides and ends.
2. Place base course material over subbase course under hot-mix asphalt pavement.
3. Shape subbase course and base course to required crown elevations and cross-slope grades.
4. Place subbase course and base course 6 inches or less in compacted thickness in a single layer.
5. Place subbase course and base course that exceeds 6 inches in compacted thickness in layers of equal thickness, with no compacted layer more than 6 inches thick or less than 3 inches thick.
6. Compact subbase course and base course at optimum moisture content to required grades, lines, cross sections, and thickness to not less than 95 percent of maximum dry unit weight according to ASTM D698.

3.20 DRAINAGE COURSE UNDER CONCRETE SLABS-ON-GRADE

A. Place drainage course on subgrades free of mud, frost, snow, or ice.

B. On prepared subgrade, place and compact drainage course under cast-in-place concrete slabs-on-grade as follows:

1. Install subdrainage geotextile on prepared subgrade according to manufacturer's written instructions, overlapping sides and ends.
2. Place drainage course 6 inches or less in compacted thickness in a single layer.
3. Place drainage course that exceeds 6 inches in compacted thickness in layers of equal thickness, with no compacted layer more than 6 inches thick or less than 3 inches thick.
4. Compact each layer of drainage course to required cross sections and thicknesses to not less than 95 percent of maximum dry unit weight according to ASTM D698.

3.21 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified geotechnical engineering testing agency to perform tests and inspections.

B. Allow testing agency to inspect and test subgrades and each fill or backfill layer. Proceed with subsequent earth moving only after test results for previously completed work comply with requirements.

C. Footing Subgrade: At footing subgrades, at least one test of each soil stratum will be performed to verify design bearing capacities. Subsequent verification and approval of other footing subgrades may be based on a visual comparison of subgrade with tested subgrade when approved by Architect.

D. Testing agency will test compaction of soils in place according to ASTM D1556, ASTM D2167, ASTM D2937, and ASTM D6938, as applicable. Tests will be performed at the following locations and frequencies:

1. Paved and Building Slab Areas: At subgrade and at each compacted fill and backfill layer, at least one test for every 2000 sq. ft. or less of paved area or building slab but in no case fewer than three tests.
2. Foundation Wall Backfill: At each compacted backfill layer, at least one test for every 100 feet or less of wall length but no fewer than two tests.
3. Trench Backfill: At each compacted initial and final backfill layer, at least one test for every 150 feet or less of trench length but no fewer than two tests.

E. When testing agency reports that subgrades, fills, or backfills have not achieved degree of compaction specified, scarify and moisten or aerate, or remove and replace soil materials to depth required; recompact and retest until specified compaction is obtained.

3.22 PROTECTION

A. Protecting Graded Areas: Protect newly graded areas from traffic, freezing, and erosion. Keep free of trash and debris.

B. Repair and reestablish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or where they lose compaction due to subsequent construction operations or weather conditions.

1. Scarify or remove and replace soil material to depth as directed by Architect; reshape and recompact.

C. Where settling occurs before Project correction period elapses, remove finished surfacing, backfill with additional soil material, compact, and reconstruct surfacing.

1. Restore appearance, quality, and condition of finished surfacing to match adjacent work, and eliminate evidence of restoration to greatest extent possible.

3.23 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Remove surplus satisfactory soil and waste materials, including unsatisfactory soil, trash, and debris, and legally dispose of them off Owner's property.

END OF SECTION

SECTION 32 12 16 - ASPHALT PAVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Hot-mix asphalt paving.
2. Hot-mix asphalt overlay.
3. Cold milling of existing asphalt pavement.
4. Hot-mix asphalt patching.

B. Related Requirements:

1. Section 024116 "Structure Demolition" for demolition and removal of existing asphalt pavement.
2. Section 312000 "Earth Moving" for subgrade preparation, fill material, separation geotextiles, unbound-aggregate subbase and base courses, and aggregate pavement shoulders.
3. Section 321313 "Concrete Paving" for concrete pavement and for separate concrete curbs, gutters, and driveway aprons.
4. Section 321373 "Concrete Paving Joint Sealants" for joint sealants and fillers at pavement terminations.
5. Section 321400 "Unit Paving" for bituminous setting bed for pavers and for stone and precast concrete curbs.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to hot-mix asphalt paving including, but not limited to, the following:

a. Review proposed sources of paving materials, including capabilities and location of plant that will manufacture hot-mix asphalt.
b. Review requirements for protecting paving work, including restriction of traffic during installation period and for remainder of construction period.

1.4 ACTION SUBMITTALS

A. Product Data: Include technical data and tested physical and performance properties.

1. Herbicide.

2. Paving geotextile.
3. Joint sealant.

B. Hot-Mix Asphalt Designs:

1. Certification, by authorities having jurisdiction, of approval of each hot-mix asphalt design proposed for the Work.
2. For each hot-mix asphalt design proposed for the Work.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For paving-mix manufacturer and testing agency.

B. Material Certificates:

1. Aggregates.
2. Asphalt binder.
3. Asphalt cement.

C. Field quality-control reports.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A paving-mix manufacturer registered with and approved by the Maryland State Highway Administration.

B. Testing Agency Qualifications: Qualified in accordance with ASTM D3666 for testing indicated.

C. Regulatory Requirements: Comply with materials, workmanship, and other applicable requirements of AASHTO and the Standards and Specifications of the Maryland State Highway Administration for asphalt paving work.

1. Measurement and payment provisions and safety program submittals included in standard specifications do not apply to this Section.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Do not apply asphalt materials if subgrade is wet or excessively damp, if rain is imminent or expected before time required for adequate cure, or if the following conditions are not met:

1. Prime Coat: Minimum surface temperature of 60 deg F.
2. Asphalt Base Course: Minimum surface temperature of 40 deg F and rising at time of placement.
3. Asphalt Surface Course: Minimum surface temperature of 60 deg F at time of placement.

PART 2 - PRODUCTS

2.1 AGGREGATES

A. General: Use materials and gradations that have performed satisfactorily in previous installations.

B. Coarse Aggregate: ASTM D692/D692M, sound; angular crushed stone, crushed gravel, or cured, crushed blast-furnace slag.

C. Fine Aggregate: ASTM D1073, sharp-edged natural sand or sand prepared from stone, gravel, cured blast-furnace slag, or combinations thereof.

1. For hot-mix asphalt, limit natural sand to a maximum of 20 percent by weight of the total aggregate mass.

2.2 ASPHALT MATERIALS

A. Asphalt Binder: AASHTO M 320 binder designation PG 64-22.

B. Asphalt Cement: In accordance with Maryland State Highway Administration standards and specifications.

C. Tack Coat: In accordance with Maryland State Highway Administration standards and specifications.

D. Water: Potable.

E. Undersealing Asphalt: ASTM D3141/D3141M; pumping consistency.

2.3 AUXILIARY MATERIALS

A. Herbicide: Commercial chemical for weed control, registered by the EPA, and not classified as "restricted use" for locations and conditions of application. Provide in granular, liquid, or wettable powder form.

B. Joint Sealant: In accordance with Maryland State Highway Administration standards and specifications.

2.4 MIXES

A. Hot-Mix Asphalt: Dense-graded, hot-laid, hot-mix asphalt plant mixes approved by Maryland State Highway Administration Standards and Specifications and complying with the following requirements:

1. Provide mixes with a history of satisfactory performance in geographical area where Project is located.
2. Base Course: 19.0mm Superpave, PG-64S-22.
3. Surface Course: 9.5mm Superpave, PG-64S-22.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that subgrade is dry and in suitable condition to begin paving.

B. Proceed with paving only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Protection: Provide protective materials, procedures, and worker training to prevent asphalt materials from spilling, coating, or building up on curbs, driveway aprons, manholes, and other surfaces adjacent to the Work.

B. Proof-roll subgrade below pavements with heavy pneumatic-tired equipment to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades.

1. Completely proof-roll subgrade in one direction, repeating proof-rolling in direction perpendicular to first direction. Limit vehicle speed to 3 mph.
2. Proof-roll with a loaded 10-wheel, tandem-axle dump truck weighing not less than 15 tons.
3. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by Architect, and replace with compacted backfill or fill as directed.

3.3 COLD MILLING

A. Clean existing pavement surface of loose and deleterious material immediately before cold milling. Remove existing asphalt pavement by cold milling to grades and cross sections indicated.

1. Mill to a depth of 2 inches.
2. Mill to a uniform finished surface free of excessive gouges, grooves, and ridges.
3. Control rate of milling to prevent tearing of existing asphalt course.
4. Repair or replace curbs, driveway aprons, manholes, and other construction damaged during cold milling.
5. Excavate and trim unbound-aggregate base course, if encountered, and keep material separate from milled hot-mix asphalt.
6. Patch surface depressions deeper than 1 inch after milling, before wearing course is laid.
7. Handle milled asphalt material in accordance with approved waste management plan required in Section 017419 "Construction Waste Management and Disposal."
8. Keep milled pavement surface free of loose material and dust.
9. Do not allow milled materials to accumulate on-site.

3.4 PATCHING

A. Asphalt Pavement: Saw cut perimeter of patch and excavate existing pavement section to sound base. Excavate rectangular or trapezoidal patches, extending 12 inches into perimeter of adjacent sound pavement, unless otherwise indicated. Cut excavation faces vertically. Remove excavated material. Recompact existing unbound-aggregate base course to form new subgrade.

B. Portland Cement Concrete Pavement: Break cracked slabs and roll as required to reseat concrete pieces firmly.

1. Undersealing: Pump hot undersealing asphalt under rocking slab until slab is stabilized or, if necessary, crack slab into pieces and roll to reseat pieces firmly.
2. Remove disintegrated or badly cracked pavement. Excavate rectangular or trapezoidal patches, extending into perimeter of adjacent sound pavement, unless otherwise indicated. Cut excavation faces vertically. Recompact existing unbound-aggregate base course to form new subgrade.

C. Tack Coat: Before placing patch material, apply tack coat uniformly to vertical asphalt surfaces abutting the patch. Apply at a rate of 0.05 to 0.15 gal./sq. yd..

1. Allow tack coat to cure undisturbed before applying hot-mix asphalt paving.
2. Avoid smearing or staining adjoining surfaces, appurtenances, and surroundings. Remove spillages and clean affected surfaces.

D. Placing Single-Course Patch Material: Fill excavated pavement areas with hot-mix asphalt base mix for full thickness of patch and, while still hot, compact flush with adjacent surface.

E. Placing Two-Course Patch Material: Partially fill excavated pavements with hot-mix asphalt base course mix and, while still hot, compact. Cover asphalt base course with compacted layer of hot-mix asphalt surface course, finished flush with adjacent surfaces.

3.5 REPAIRS

A. Leveling Course: Install and compact leveling course consisting of hot-mix asphalt surface course to level sags and fill depressions deeper than 1 inch in existing pavements.

1. Install leveling wedges in compacted lifts not exceeding 3 inches thick.

B. Crack and Joint Filling: Remove existing joint filler material from cracks or joints to a depth of 1/4 inch.

1. Clean cracks and joints in existing hot-mix asphalt pavement.
2. Use emulsified-asphalt slurry to seal cracks and joints less than 1/4 inch wide. Fill flush with surface of existing pavement and remove excess.
3. Use hot-applied joint sealant to seal cracks and joints more than 1/4 inch wide. Fill flush with surface of existing pavement and remove excess.

3.6 SURFACE PREPARATION

A. Ensure that prepared subgrade has been proof-rolled and is ready to receive paving. Immediately before placing asphalt materials, remove loose and deleterious material from substrate surfaces.

B. Herbicide Treatment: Apply herbicide in accordance with manufacturer's recommended rates and written application instructions. Apply to dry, prepared subgrade or surface of compacted-aggregate base before applying paving materials.

1. Mix herbicide with prime coat if formulated by manufacturer for that purpose.

C. Tack Coat: Apply uniformly to surfaces of existing pavement at a rate of 0.05 to 0.15 gal./sq. yd..

1. Allow tack coat to cure undisturbed before applying hot-mix asphalt paving.
2. Avoid smearing or staining adjoining surfaces, appurtenances, and surroundings. Remove spillages and clean affected surfaces.

3.7 HOT-MIX ASPHALT PLACEMENT

A. Machine place hot-mix asphalt on prepared surface, spread uniformly, and strike off. Place asphalt mix by hand in areas inaccessible to equipment in a manner that prevents segregation of mix. Place each course to required grade, cross section, and thickness when compacted.

1. Place hot-mix asphalt base course in number of lifts and thicknesses indicated.
2. Place hot-mix asphalt surface course in single lift.
3. Spread mix at a minimum temperature of 250 deg F.
4. Begin applying mix along centerline of crown for crowned sections and on high side of one-way slopes unless otherwise indicated.
5. Regulate paver machine speed to obtain smooth, continuous surface free of pulls and tears in asphalt-paving mat.

B. Place paving in consecutive strips not less than 10 feet wide unless infill edge strips of a lesser width are required.

1. After first strip has been placed and rolled, place succeeding strips and extend rolling to overlap previous strips. Overlap mix placement about 1 to 1-1/2 inches from strip to strip to ensure proper compaction of mix along longitudinal joints.
2. Complete a section of asphalt base course before placing asphalt surface course.

C. Promptly correct surface irregularities in paving course behind paver. Use suitable hand tools to remove excess material forming high spots. Fill depressions with hot-mix asphalt to prevent segregation of mix; use suitable hand tools to smooth surface.

3.8 JOINTS

A. Construct joints to ensure a continuous bond between adjoining paving sections. Construct joints free of depressions, with same texture and smoothness as other sections of hot-mix asphalt course.

1. Clean contact surfaces and apply tack coat to joints.
2. Offset longitudinal joints, in successive courses, a minimum of 6 inches.
3. Offset transverse joints, in successive courses, a minimum of 24 inches.
4. Compact joints as soon as hot-mix asphalt will bear roller weight without excessive displacement.
5. Compact asphalt at joints to a density within 2 percent of specified course density.

3.9 COMPACTION

A. General: Begin compaction as soon as placed hot-mix paving will bear roller weight without excessive displacement. Compact hot-mix paving with hot hand tampers or with vibratory-plate compactors in areas inaccessible to rollers.

1. Complete compaction before mix temperature cools to 185 deg F.

B. Breakdown Rolling: Complete breakdown or initial rolling immediately after rolling joints and outside edge. Examine surface immediately after breakdown rolling for indicated crown, grade, and smoothness. Correct laydown and rolling operations to comply with requirements.

C. Intermediate Rolling: Begin intermediate rolling immediately after breakdown rolling while hot-mix asphalt is still hot enough to achieve specified density. Continue rolling until hot-mix asphalt course has been uniformly compacted to the following density:

1. Average Density, Marshall Test Method: 96 percent of reference laboratory density in accordance with ASTM D6927, but not less than 94 percent or greater than 100 percent.
2. Average Density, Rice Test Method: 92 percent of reference maximum theoretical density in accordance with ASTM D2041/D2041M, but not less than 90 percent or greater than 96 percent.

D. Finish Rolling: Finish roll paved surfaces to remove roller marks while hot-mix asphalt is still warm.

E. Edge Shaping: While surface is being compacted and finished, trim edges of pavement to proper alignment. Bevel edges while asphalt is still hot; compact thoroughly.

F. Repairs: Remove paved areas that are defective or contaminated with foreign materials and replace with fresh, hot-mix asphalt. Compact by rolling to specified density and surface smoothness.

G. Protection: After final rolling, do not permit vehicular traffic on pavement until it has cooled and hardened.

H. Erect barricades to protect paving from traffic until mixture has cooled enough not to become marked.

3.10 INSTALLATION TOLERANCES

A. Pavement Thickness: Compact each course to produce thickness indicated within the following tolerances:

1. Base Course: Plus or minus 1/2 inch.
2. Surface Course: Plus 1/4 inch, no minus.

B. Pavement Surface Smoothness: Compact each course to produce surface smoothness within the following tolerances as determined by using a 10-foot straightedge applied transversely or longitudinally to paved areas:

1. Base Course: 1/4 inch.
2. Surface Course: 1/8 inch.

3.11 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Thickness: In-place compacted thickness of hot-mix asphalt courses will be determined in accordance with ASTM D3549/D3549M.

C. Surface Smoothness: Finished surface of each hot-mix asphalt course will be tested for compliance with smoothness tolerances.

D. In-Place Density: Testing agency will take samples of uncompacted paving mixtures and compacted pavement in accordance with ASTM D979/D979M.

1. Reference maximum theoretical density will be determined by averaging results from four samples of hot-mix asphalt-paving mixture delivered daily to site, prepared in accordance with ASTM D2041/D2041M, and compacted in accordance with job-mix specifications.
2. In-place density of compacted pavement will be determined by testing core samples in accordance with ASTM D1188 or ASTM D2726/D2726M.

a. One core sample will be taken for every 1000 sq. yd. or less of installed pavement, with no fewer than three cores taken.
b. Field density of in-place compacted pavement may also be determined by nuclear method in accordance with ASTM D2950/D2950M and coordinated with ASTM D1188 or ASTM D2726/D2726M.

E. Replace and compact hot-mix asphalt where core tests were taken.

F. Remove and replace or install additional hot-mix asphalt where test results or measurements indicate that it does not comply with specified requirements.

3.12 WASTE HANDLING

A. General: Handle asphalt-paving waste in accordance with approved waste management plan required in Section 017419 "Construction Waste Management and Disposal."

END OF SECTION

SECTION 32 13 13 - CONCRETE PAVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes Concrete Paving**.**

1. Driveways.
2. Curbs and gutters.
3. Walks.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for general building applications of concrete.
2. Section 321316 "Decorative Concrete Paving" for stamped concrete other than stamped detectable warnings.
3. Section 321373 "Concrete Paving Joint Sealants" for joint sealants in expansion and contraction joints within concrete paving and in joints between concrete paving and asphalt paving or adjacent construction.
4. Section 321723 "Pavement Markings."
5. Section 321726 "Tactile Warning Surfacing" for detectable warning mats.

1.3 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of blended hydraulic cement, fly ash, slag cement, and other pozzolans.

B. W/C Ratio: The ratio by weight of water to cementitious materials.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to concrete paving, including but not limited to, the following:

a. Concrete mixture design.
b. Quality control of concrete materials and concrete paving construction practices.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Design Mixtures: For each concrete paving mixture. Include alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified ready-mix concrete manufacturer and testing agency.

B. Material Certificates: For the following, from manufacturer:

1. Cementitious materials.
2. Steel reinforcement and reinforcement accessories.
3. Admixtures.
4. Curing compounds.
5. Bonding agent or epoxy adhesive.
6. Joint fillers.

C. Material Test Reports: For each of the following:

1. Aggregates: Include service-record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.

D. Field quality-control reports.

1.7 QUALITY ASSURANCE

A. Ready-Mix-Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C94/C94M requirements for production facilities and equipment.

B. Testing Agency Qualifications: Qualified according to ASTM C1077 and ASTM E329 for testing indicated.

1. Personnel conducting field tests shall be qualified as ACI Concrete Field-Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.

1.8 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified independent testing agency to perform preconstruction testing on concrete paving mixtures.

1.9 FIELD CONDITIONS

A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.

B. Cold-Weather Concrete Placement: Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing, or low temperatures. Comply with ACI 306.1 and the following:

1. When air temperature has fallen to or is expected to fall below 40 deg F, uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50 deg F and not more than 80 deg F at point of placement.
2. Do not use frozen materials or materials containing ice or snow.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in design mixtures.

C. Hot-Weather Concrete Placement: Comply with ACI 301 and as follows when hot-weather conditions exist:

1. Cool ingredients before mixing to maintain concrete temperature below 90 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated in total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Cover steel reinforcement with water-soaked burlap, so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
3. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

PART 2 - PRODUCTS

2.1 CONCRETE, GENERAL

A. ACI Publications: Comply with ACI 301 unless otherwise indicated.

2.2 FORMS

A. Form Materials: Plywood, metal, metal-framed plywood, or other approved panel-type materials to provide full-depth, continuous, straight, and smooth exposed surfaces.

1. Use flexible or uniformly curved forms for curves with a radius of 100 feet or less. Do not use notched and bent forms.

B. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and that will not impair subsequent treatments of concrete surfaces.

2.3 STEEL REINFORCEMENT

A. Plain-Steel Welded-Wire Reinforcement: ASTM A1064/A1064M, fabricated from galvanized-steel wire into flat sheets.

B. Deformed-Steel Welded-Wire Reinforcement: ASTM A1064/A1064M, flat sheet.

C. Epoxy-Coated Welded-Wire Reinforcement: ASTM A884/A884M, Class A, plain steel.

D. Reinforcing Bars: ASTM A615/A615M, Grade 60; deformed.

E. Epoxy-Coated Reinforcing Bars: ASTM A775/A775M or ASTM A934/A934M; with ASTM A615/A615M, Grade 60 deformed bars.

F. Steel Bar Mats: ASTM A184/A184M; with ASTM A615/A615M, Grade 60 deformed bars; assembled with clips.

G. Plain-Steel Wire: ASTM A1064/A1064M, galvanized.

H. Deformed-Steel Wire: ASTM A1064/A1064M.

I. Epoxy-Coated-Steel Wire: ASTM A884/A884M, Class A; coated, plain.

J. Joint Dowel Bars: ASTM A615/A615M, Grade 60 plain-steel bars; zinc coated (galvanized) after fabrication according to ASTM A767/A767M, Class I coating. Cut bars true to length with ends square and free of burrs.

K. Epoxy-Coated, Joint Dowel Bars: ASTM A775/A775M; with ASTM A615/A615M, Grade 60 plain-steel bars.

L. Tie Bars: ASTM A615/A615M, Grade 60; deformed.

M. Hook Bolts: ASTM A307, Grade A, internally and externally threaded. Design hook-bolt joint assembly to hold coupling against paving form and in position during concreting operations, and to permit removal without damage to concrete or hook bolt.

N. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars, welded-wire reinforcement, and dowels in place. Manufacture bar supports according to CRSI's "Manual of Standard Practice" from steel wire, plastic, or precast concrete of greater compressive strength than concrete specified, and as follows:

1. Equip wire bar supports with sand plates or horizontal runners where base material will not support chair legs.
2. For epoxy-coated reinforcement, use epoxy-coated or other dielectric-polymer-coated wire bar supports.

O. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating, compatible with epoxy coating on reinforcement.

P. Zinc Repair Material: ASTM A780/A780M.

2.4 CONCRETE MATERIALS

A. Cementitious Materials: Use the following cementitious materials, of same type, brand, and source throughout Project:

1. Portland Cement: ASTM C150/C150M, white portland cement Type II.

B. Normal-Weight Aggregates: ASTM C33/C33M, uniformly graded. Provide aggregates from a single source.

C. Air-Entraining Admixture: ASTM C260/C260M.

D. Chemical Admixtures: Admixtures certified by manufacturer to be compatible with other admixtures and to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material.

1. Water-Reducing Admixture: ASTM C494/C494M, Type A.

2. Retarding Admixture: ASTM C494/C494M, Type B.
3. Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type D.
4. High-Range, Water-Reducing Admixture: ASTM C494/C494M, Type F.
5. High-Range, Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type G.
6. Plasticizing and Retarding Admixture: ASTM C1017/C1017M, Type II.

E. Water: Potable and complying with ASTM C94/C94M.

2.5 CURING MATERIALS

A. Absorptive Cover: AASHTO M 182, Class 3, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. dry.

B. Moisture-Retaining Cover: ASTM C171, polyethylene film or white burlap-polyethylene sheet.

C. Water: Potable.

D. Evaporation Retarder: Waterborne, monomolecular, film forming, manufactured for application to fresh concrete.

E. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C309, Type 1, Class B, dissipating.

2.6 RELATED MATERIALS

A. Joint Fillers: ASTM D1751, asphalt-saturated cellulosic fiber in preformed strips.

2.7 CONCRETE MIXTURES

A. Prepare design mixtures, proportioned according to ACI 301, for each type and strength of normal-weight concrete, and as determined by either laboratory trial mixtures or field experience.

1. Use a qualified independent testing agency for preparing and reporting proposed concrete design mixtures for the trial batch method.
2. When automatic machine placement is used, determine design mixtures and obtain laboratory test results that comply with or exceed requirements.

B. Concrete Mixtures: Normal-weight concrete.

1. Compressive Strength (28 Days): 4500 psi.

2.8 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, and mix concrete materials and concrete according to ASTM C94/C94M. Furnish batch certificates for each batch discharged and used in the Work.

1. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

B. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete according to ASTM C94/C94M. Mix concrete materials in appropriate drum-type batch machine mixer.

1. For concrete batches of 1 cu. yd. or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.
2. For concrete batches larger than 1 cu. yd., increase mixing time by 15 seconds for each additional 1 cu. yd..
3. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixing time, quantity, and amount of water added.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine exposed subgrades and subbase surfaces for compliance with requirements for dimensional, grading, and elevation tolerances.

B. Proof-roll prepared subbase surface below concrete paving to identify soft pockets and areas of excess yielding.

1. Completely proof-roll subbase in one direction and repeat in perpendicular direction. Limit vehicle speed to 3 mph.
2. Proof-roll with a pneumatic-tired and loaded, 10-wheel, tandem-axle dump truck weighing not less than 15 tons.
3. Correct subbase with soft spots and areas of pumping or rutting exceeding depth of 1/2 inch according to requirements in Section 312000 "Earth Moving."

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove loose material from compacted subbase surface immediately before placing concrete.

3.3 EDGE FORMS AND SCREED CONSTRUCTION

A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement.

B. Clean forms after each use and coat with form-release agent to ensure separation from concrete without damage.

3.4 INSTALLATION OF STEEL REINFORCEMENT

A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

B. Clean reinforcement of loose rust and mill scale, earth, ice, or other bond-reducing materials.

C. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.

D. Install welded-wire reinforcement in lengths as long as practicable. Lap adjoining pieces at least one full mesh, and lace splices with wire. Offset laps of adjoining widths to prevent continuous laps in either direction.

E. Zinc-Coated Reinforcement: Use galvanized-steel wire ties to fasten zinc-coated reinforcement. Repair cut and damaged zinc coatings with zinc repair material.

F. Epoxy-Coated Reinforcement: Use epoxy-coated steel wire ties to fasten epoxy-coated reinforcement. Repair cut and damaged epoxy coatings with epoxy repair coating according to ASTM D3963/D3963M.

G. Install fabricated bar mats in lengths as long as practicable. Handle units to keep them flat and free of distortions. Straighten bends, kinks, and other irregularities, or replace units as required before placement. Set mats for a minimum 2-inch overlap of adjacent mats.

3.5 JOINTS

A. General: Form construction, isolation, and contraction joints and tool edges true to line, with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline unless otherwise indicated.

1. When joining existing paving, place transverse joints to align with previously placed joints unless otherwise indicated.

B. Construction Joints: Set construction joints at side and end terminations of paving and at locations where paving operations are stopped for more than one-half hour unless paving terminates at isolation joints.

1. Continue steel reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of paving strips unless otherwise indicated.
2. Provide tie bars at sides of paving strips where indicated.
3. Butt Joints: Use bonding agent or epoxy-bonding adhesive at joint locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
4. Keyed Joints: Provide preformed keyway-section forms or bulkhead forms with keys unless otherwise indicated. Embed keys at least 1-1/2 inches into concrete.
5. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.

C. Isolation Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, other fixed objects, and where indicated.

1. Locate expansion joints at intervals of 50 feet unless otherwise indicated.
2. Extend joint fillers full width and depth of joint.
3. Terminate joint filler not less than 1/2 inch or more than 1 inch below finished surface if joint sealant is indicated.
4. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
5. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.

6. During concrete placement, protect top edge of joint filler with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.

D. Contraction Joints: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of the concrete thickness, as follows, to match jointing of existing adjacent concrete paving:

1. Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint with grooving tool to a 1/4-inch radius. Repeat grooving of contraction joints after applying surface finishes. Eliminate grooving-tool marks on concrete surfaces.

   a. Tolerance: Ensure that grooved joints are within 3 inches either way from centers of dowels.

2. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch- wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before developing random contraction cracks.

   a. Tolerance: Ensure that sawed joints are within 3 inches either way from centers of dowels.

3. Doweled Contraction Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.

E. Edging: After initial floating, tool edges of paving, gutters, curbs, and joints in concrete with an edging tool to a 1/4-inch radius. Repeat tooling of edges after applying surface finishes. Eliminate edging-tool marks on concrete surfaces.

3.6 CONCRETE PLACEMENT

A. Before placing concrete, inspect and complete formwork installation, steel reinforcement, and items to be embedded or cast-in.

B. Remove snow, ice, or frost from subbase surface and steel reinforcement before placing concrete. Do not place concrete on frozen surfaces.

C. Moisten subbase to provide a uniform dampened condition at time concrete is placed. Do not place concrete around manholes or other structures until they are at required finish elevation and alignment.

D. Comply with ACI 301 requirements for measuring, mixing, transporting, and placing concrete.

E. Do not add water to concrete during delivery or at Project site. Do not add water to fresh concrete after testing.

F. Deposit and spread concrete in a continuous operation between transverse joints. Do not push or drag concrete into place or use vibrators to move concrete into place.

G. Consolidate concrete according to ACI 301 by mechanical vibrating equipment supplemented by hand spading, rodding, or tamping.

1. Consolidate concrete along face of forms and adjacent to transverse joints with an internal vibrator. Keep vibrator away from joint assemblies, reinforcement, or side forms. Use only square-faced shovels for hand spreading and consolidation. Consolidate with care to prevent dislocating reinforcement, dowels and joint devices.

H. Screed paving surface with a straightedge and strike off.

I. Commence initial floating using bull floats or darbies to impart an open-textured and uniform surface plane before excess moisture or bleedwater appears on the surface. Do not further disturb concrete surfaces before beginning finishing operations or spreading surface treatments.

J. Curbs and Gutters: Use design mixture for automatic machine placement. Produce curbs and gutters to required cross section, lines, grades, finish, and jointing.

K. Slip-Form Paving: Use design mixture for automatic machine placement. Produce paving to required thickness, lines, grades, finish, and jointing.

1. Compact subbase and prepare subgrade of sufficient width to prevent displacement of slip-form paving machine during operations.

3.7 FLOAT FINISHING

A. General: Do not add water to concrete surfaces during finishing operations.

B. Float Finish: Begin the second floating operation when bleedwater sheen has disappeared and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats or by hand floating if area is small or inaccessible to power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture.

1. Medium-to-Fine-Textured Broom Finish: Draw a soft-bristle broom across float-finished concrete surface, perpendicular to line of traffic, to provide a uniform, fine-line texture.

3.8 CONCRETE PROTECTION AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.

B. Comply with ACI 306.1 for cold-weather protection.

C. Evaporation Retarder: Apply evaporation retarder to concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete but before float finishing.

D. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.

E. Curing Methods: Cure concrete by moisture curing, moisture-retaining-cover curing, curing compound, or a combination of these as follows:

1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:

a. Water.
b. Continuous water-fog spray.
c. Absorptive cover, water saturated and kept continuously wet. Cover concrete surfaces and edges with 12-inch lap over adjacent absorptive covers.

2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive. Immediately repair any holes or tears occurring during installation or curing period, using cover material and waterproof tape.

3. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating, and repair damage during curing period.

3.9 PAVING TOLERANCES

A. Comply with tolerances in ACI 117 and as follows:

1. Elevation: 3/4 inch.
2. Thickness: Plus 3/8 inch, minus 1/4 inch.
3. Surface: Gap below 10-feet- long; unleveled straightedge not to exceed 1/2 inch.
4. Alignment of Tie-Bar End Relative to Line Perpendicular to Paving Edge: 1/2 inch per 12 inches of tie bar.
5. Lateral Alignment and Spacing of Dowels: 1 inch.
6. Vertical Alignment of Dowels: 1/4 inch.
7. Alignment of Dowel-Bar End Relative to Line Perpendicular to Paving Edge: 1/4 inch per 12 inches of dowel.
8. Joint Spacing: 3 inches.
9. Contraction Joint Depth: Plus 1/4 inch, no minus.
10. Joint Width: Plus 1/8 inch, no minus.
11. ADA accessible pathways are to be constructed with a maximum of 5% running slope and a 2% cross slope. There is no tolerance for exceeding these slopes.
12. ADA accessible ramps, with handrails, are to be constructed with a maximum running slope of 8.33% (1:12). There is no tolerance for exceeding these slopes.
13. Landings within an ADA accessible pathway or ramp shall be sloped at 2% or less in all directions. There is no tolerance for exceeding these slopes.
14. ADA accessible parking shall be sloped at 2% or less in all directions. There is no tolerance for exceeding these slopes.

3.10 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Testing Services: Testing and inspecting of composite samples of fresh concrete obtained according to ASTM C172/C172M shall be performed according to the following requirements:

1. Testing Frequency: Obtain at least one composite sample for each 100 cu. yd. or 5000 sq. ft. or fraction thereof of each concrete mixture placed each day.

a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

2. Slump: ASTM C143/C143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
3. Air Content: ASTM C231/C231M, pressure method; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
4. Concrete Temperature: ASTM C1064/C1064M; one test hourly when air temperature is 40 deg F and below and when it is 80 deg F and above, and one test for each composite sample.
5. Compression Test Specimens: ASTM C31/C31M; cast and laboratory cure one set of three standard cylinder specimens for each composite sample.
6. Compressive-Strength Tests: ASTM C39/C39M; test one specimen at seven days and two specimens at 28 days.

    a. A compressive-strength test shall be the average compressive strength from two specimens obtained from same composite sample and tested at 28 days.

C. Strength of each concrete mixture will be satisfactory if average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.

D. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.

E. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.

F. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect.

G. Concrete paving will be considered defective if it does not pass tests and inspections.

H. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

I. Prepare test and inspection reports.

3.11 REPAIR AND PROTECTION

A. Remove and replace concrete paving that is broken, damaged, or defective or that does not comply with requirements in this Section. Remove work in complete sections from joint to joint unless otherwise approved by Architect.

B. Drill test cores, where directed by Architect, when necessary to determine magnitude of cracks or defective areas. Fill drilled core holes in satisfactory paving areas with portland cement concrete bonded to paving with epoxy adhesive.

C. Protect concrete paving from damage. Exclude traffic from paving for at least 14 days after placement. When construction traffic is permitted, maintain paving as clean as possible by removing surface stains and spillage of materials as they occur.

D. Maintain concrete paving free of stains, discoloration, dirt, and other foreign material. Sweep paving not more than two days before date scheduled for Substantial Completion inspections.

END OF SECTION

SECTION 32 13 13.33 - CONCRETE PAVING FOR SIDEWALKS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Type 1 Pavement – broom finish
2. Type 2 Pavement – exposed aggregate finish

B. Related Sections:

1. Division 03 Section "Miscellaneous Cast-in-Place Concrete" for general building applications of concrete.
2. Division 32 Section "Concrete Paving Joint Sealants for Sidewalks" for joint sealants in expansion and contraction joints within concrete paving and in joints between concrete paving and asphalt paving or adjacent construction.

1.2 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of blended hydraulic cement, fly ash and other pozzolans, and ground granulated blast-furnace slag.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and pre-consumer recycled content. Include statement indicating cost for each product having recycled content.
2. Design Mixtures for Credit ID 1: For each concrete mixture containing fly ash as a replacement for portland cement or other portland cement replacements. For each design mixture submitted, include an equivalent concrete mixture that does not contain portland cement replacements, to determine amount of portland cement replaced.

C. Samples for Initial Selection: For each type of product, ingredient, or admixture requiring color selection.

1. Exposed Aggregate 5 lb. (2.3 kg) sample.

D. Samples for Verification: For each type of product or exposed finish, prepared as Samples of size indicated below:

1. Exposed Aggregate: 5-lb (2.3-kg) Sample of each mix.

E. Other Action Submittals:

1. Design Mixtures: For each concrete paving mixture. Include alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified ready-mix concrete manufacturer and testing agency.

B. Material Certificates: For the following, from manufacturer:

1. Cementitious materials.
2. Steel reinforcement and reinforcement accessories.
3. Fiber reinforcement.
4. Admixtures.
5. Curing compounds.
6. Applied finish materials.
7. Bonding agent or epoxy adhesive.
8. Joint fillers.

C. Material Test Reports: For each of the following:

1. Aggregates. Include service-record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.

D. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Ready-Mix-Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products, including exposed aggregate finishes, and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.

1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities" (Quality Control Manual - Section 3, "Plant Certification Checklist").

B. Testing Agency Qualifications: Qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.

1. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.

C. Concrete Testing Service: Engage a qualified testing agency to perform material evaluation tests and to design concrete mixtures.

D. ACI Publications: Comply with ACI 301 (ACI 301M) unless otherwise indicated.

E. Mockups: Build mockups of exposed aggregate concrete to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockups of full-thickness sections of concrete paving to demonstrate typical joints; surface finish, texture, and color; curing; and standard of workmanship.

2. Build mockups of concrete paving in the location and of the size indicated or, if not indicated, build mockups where directed by Landscape Architect and not less than 96 inches (2400 mm) by 96 inches (2400 mm). Build exposed aggregate mockups in both retarder strengths indicated below.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Landscape Architect specifically approves such deviations in writing.
4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

F. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to concrete paving, including but not limited to, the following:

   a. Concrete mixture design.
   b. Quality control of concrete materials and concrete paving construction practices including exposed aggregate finishing.

2. Require representatives of each entity directly concerned with concrete paving to attend, including the following:

   a. Contractor's superintendent.
   b. Ready-mix concrete manufacturer.
   c. Concrete paving subcontractor.
   d. Manufacturer's representative of retarder system used for exposed aggregate paving.

1.6 PROJECT CONDITIONS

A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.

PART 2 - PRODUCTS

2.1 FORMS

A. Form Materials: Plywood, metal, metal-framed plywood, or other approved panel-type materials to provide full-depth, continuous, straight, and smooth exposed surfaces.

1. Use flexible or uniformly curved forms for curves with a radius of 100 feet (30.5 m) or less to maintain smooth, continuous curves. Do not use notched and bent forms.

B. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and that will not impair subsequent treatments of concrete surfaces.

2.2 STEEL REINFORCEMENT

A. Epoxy-Coated Welded Wire Reinforcement: ASTM A 884/A 884M, Class A, plain steel.

B. Epoxy-Coated, Joint Dowel Bars: ASTM A 775/A 775M; with ASTM A 615/A 615M, Grade 60 (Grade 420), plain-steel bars.

C. Tie Bars: ASTM A 615/A 615M, Grade 60 (Grade 420), deformed.

D. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars, welded wire reinforcement, and dowels in place. Manufacture bar supports according to CRSI's "Manual of Standard Practice" from plastic of greater compressive strength than concrete specified, and as follows:

E. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating, compatible with epoxy coating on reinforcement.

2.3 CONCRETE MATERIALS

A. Cementitious Material: Use the following cementitious materials, of same type, brand, and source throughout Project:

1. Portland Cement: ASTM C 150, gray portland cement Type II. Supplement with the following:

    a. Fly Ash: ASTM C 618, Class C or Class F.
    b. Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or 120.

B. Normal-Weight Aggregates: ASTM C 33, Class 4S, uniformly graded. Provide aggregates from a single source.

1. Maximum Coarse-Aggregate Size: 3/4 inch (19 mm) nominal.
2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

C. Exposed Aggregate: Selected, hard, and durable; washed; free of materials with deleterious reactivity to cement or that cause staining; from a single source, with gap-graded coarse aggregate as follows:

1. Aggregate Sizes: 3/8-to-5/8-inch (10 to 16 mm) nominal.
2. Aggregate Source, Shape, and Color: Rounded, multicolored (Grey, Brown, Blue, Red) stone
3. Stone type: Delaware River Jacks
4. Aggregate Source: NJ Gravel & Sand Co:

    a. 1661 Hwy 34 South
    Wall, NJ 07719
    Phone: 732-410-7172
    Email: info@njgravelsand.com
    b. Or approved equal.

D. Water: Potable and complying with ASTM C 94/C 94M.

E. Air-Entraining Admixture: ASTM C 260.

F. Chemical Admixtures: Admixtures certified by manufacturer to be compatible with other admixtures and to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material.

1. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.

2.4 FIBER REINFORCEMENT

A. Synthetic Fiber: Fibrillated polypropylene fibers engineered and designed for use in concrete paving, complying with ASTM C 1116/C 1116M, Type III, 1/2 to 1-1/2 inches (13 to 38 mm) long.

2.5 CURING MATERIALS

A. Absorptive Cover: AASHTO M 182, Class 3, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. (305 g/sq. m) dry or cotton mats.

B. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.

C. Water: Potable.

D. Evaporation Retarder: Waterborne, monomolecular, film forming, manufactured for application to fresh concrete.

E. Retardant for Exposed Aggregate: Lithocast Surface Retarder

1. Manufacturer: L.M. Scofield Company
   Telephone 800-800-9900
   Website: www.scofield.com
2. To be selected at mockup stage between:

   a. Lithocast Surface Retarder 15
   b. Lithocast Surface Retarder 50

3. Or approved equal.

F. Curing Paper:

1. Nonstaining, waterproof paper, consisting of two layers of kraft paper cemented together and reinforced with fibber and complying with ASTM C 17.

2.6 PROTECTIVE LAYER

A. Manufacturers: Subject to compliance with requirements,

1. Manufacturer: L.M. Scofield Company
   Telephone: 800-800-9900
   Website: www.scofield.com
2. Or approved equal.

B. Repello FPS: Breathable non-film forming surface treatment.

1. Blend of inorganic fluorinated polysiloxane polymer
2. Low odor water based
3. Exterior and UV light stable
4. Colorless

5. Use and store according to manufacturer's directions.

2.7 RELATED MATERIALS

A. Joint Fillers for Expansion Joint EJ1: ASTM D 1751, asphalt-saturated cellulosic fiber in preformed strips as designated on the drawings.

B. Joint Fillers for Expansion Joint EJ2: self-expanding cork in preformed strips as designated on the drawings.

C. Bonding Agent: ASTM C 1059, Type II, non-redispersible, acrylic emulsion or styrene butadiene.

D. Epoxy Bonding Adhesive: ASTM C 881/C 881M, two-component epoxy resin capable of humid curing and bonding to damp surfaces; of class suitable for application temperature, of grade complying with requirements, and of the following types:

1. Types IV and V, load bearing, for bonding hardened or freshly mixed concrete to hardened concrete.

2.8 CONCRETE MIXTURES

A. Prepare design mixtures, proportioned according to ACI 301 (ACI 301M), for each type and strength of normal-weight concrete, and as determined by either laboratory trial mixtures or field experience.

1. Use a qualified independent testing agency for preparing and reporting proposed concrete design mixtures for the trial batch method.

B. Proportion mixtures to provide normal-weight concrete with the following properties:

1. Compressive Strength (28 Days): 4000 psi (27.6 MPa)
2. Maximum Water-Cementitious Materials Ratio at Point of Placement: 0.45.
3. Slump Limit: 4 inches (100 mm), plus or minus 1 inch (25 mm).

C. Add air-entraining admixture at manufacturer's prescribed rate to result in normal-weight concrete at point of placement having an air content as follows:

1. Air Content: **5** percent plus or minus 1.5 percent for 3/42-inch (19-mm) nominal maximum aggregate size.

D. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.

E. Chemical Admixtures: Use admixtures according to manufacturer's written instructions.

1. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions and when they do not affect the effectiveness of the color, retardant or sealant.

F. Cementitious Materials: Use fly ash, pozzolan, ground granulated blast-furnace slag, and silica fume as needed to reduce the total amount of portland cement, which would otherwise be used, by not less than 40 percent.

G. Synthetic Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than 1.0 lb/cu. yd. (0.60 kg/cu. m).

2.9 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, and mix concrete materials and concrete according to ASTM C 94/C 94M and ASTM C 1116/C 1116M. Furnish batch certificates for each batch discharged and used in the Work.

1. When air temperature is between 85 and 90 deg F (30 and 32 deg C), reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F (32 deg C), reduce mixing and delivery time to 60 minutes.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine exposed subgrades and subbase surfaces for compliance with requirements for dimensional, grading, and elevation tolerances.

B. Proof-roll prepared subbase surface below concrete paving to identify soft pockets and areas of excess yielding.

1. Completely proof-roll subbase in one direction**.** Limit vehicle speed to 3 mph (5 km/h).
2. Proof-roll with a pneumatic-tired and loaded, 10-wheel, tandem-axle dump truck weighing not less than 15 tons (13.6 tonnes).
3. Correct subbase with soft spots and areas of pumping or rutting exceeding depth of 1/2 inch (13 mm) according to requirements in Division 31 Section "Earth Moving."

C. Proceed with installation only after inspection and approval by Landscape Architect and unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove loose material from compacted subbase surface immediately before placing concrete.

3.3 EDGE FORMS AND SCREED CONSTRUCTION

A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement.

B. Clean forms after each use and coat with form-release agent to ensure separation from concrete without damage.

3.4 STEEL REINFORCEMENT

A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

B. Clean reinforcement of loose rust and mill scale, earth, ice, or other bond-reducing materials.

C. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.

D. Install welded wire reinforcement in lengths as long as practicable. Lap adjoining pieces at least one full mesh, and lace splices with wire. Offset laps of adjoining widths to prevent continuous laps in either direction.

E. Epoxy-Coated Reinforcement: Use epoxy-coated steel wire ties to fasten epoxy-coated reinforcement. Repair cut and damaged epoxy coatings with epoxy repair coating according to ASTM D 3963/D 3963M.

3.5 JOINTS

A. General: Form construction, isolation, and contraction joints and tool edges true to line, with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline unless otherwise indicated.

1. When joining existing paving, place transverse joints to align with previously placed joints unless otherwise indicated.

B. Construction Joints: Set construction joints at side and end terminations of paving and at locations where paving operations are stopped for more than one-half hour unless paving terminates at isolation joints.

1. Continue steel reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of paving strips unless otherwise indicated.
2. Provide tie bars at sides of paving strips where indicated.
3. Butt Joints: Use bonding agent at joint locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
4. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.

C. Isolation Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, other fixed objects, and where indicated.

1. Locate expansion joints at intervals of 50 feet (15.25 m) unless otherwise indicated.
2. Extend joint fillers full width and depth of joint.
3. Terminate joint filler not less than 1/2 inch (13 mm) or more than 1 inch (25 mm) below finished surface if joint sealant is indicated.
4. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
5. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.
6. During concrete placement, protect top edge of joint filler with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.

D. Control Joints: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of the concrete thickness, as follows:

1. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch- (3-mm-) wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before developing random contraction cracks.

    a. Tolerance: Ensure that sawed joints are within 3 inches (75 mm) either way from centers of dowels.

E. Edging: After initial floating, tool edges of paving, gutters, curbs, and joints in concrete with an edging tool to a 1/4-inch (6-mm) radius. Repeat tooling of edges after applying surface finishes. Eliminate edging-tool marks on concrete surfaces.

3.6 CONCRETE PLACEMENT

A. Before placing concrete, inspect and complete formwork installation, steel reinforcement, and items to be embedded or cast-in.

B. Remove snow, ice, or frost from subbase surface and steel reinforcement before placing concrete. Do not place concrete on frozen surfaces.

C. Remove organic materials from the subbase surface and steel reinforcement before placing concrete.

D. Moisten subbase to provide a uniform dampened condition at time concrete is placed.

E. Do not place concrete around manholes or other structures until they are at required finish elevation and alignment.

F. Comply with ACI 301 (ACI 301M) requirements for measuring, mixing, transporting, and placing concrete.

G. Do not add water to concrete during delivery or at Project site. Do not add water to fresh concrete after testing.

H. Deposit and spread concrete in a continuous operation between transverse joints. Do not push or drag concrete into place or use vibrators to move concrete into place.

I. Consolidate concrete according to ACI 301 (ACI 301M) by mechanical vibrating equipment supplemented by hand spading, rodding, or tamping.

    1. Consolidate concrete along face of forms and adjacent to transverse joints with an internal vibrator. Keep vibrator away from joint assemblies**,** reinforcement, or side forms. Use only square-faced shovels for hand spreading and consolidation. Consolidate with care to prevent dislocating reinforcement, dowels and joint devices.

J. Screed paving surface with a straightedge and strike off.

K. Commence initial floating using bull floats or darbies to impart an open-textured and uniform surface plane before excess moisture or bleed water appears on the surface. Do not further disturb concrete surfaces before beginning finishing operations or spreading surface treatments.

    1. Compact subbase and prepare subgrade of sufficient width to prevent displacement of slip-form paving machine during operations.

L. Cold-Weather Placement: Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing, or low temperatures. Comply with ACI 306.1 and the following:

1. When air temperature has fallen to or is expected to fall below 40 deg F (4.4 deg C), uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50 deg F (10 deg C) and not more than 80 deg F (27 deg C) at point of placement.
2. Do not use frozen materials or materials containing ice or snow.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in design mixtures.

M. Hot-Weather Placement: Comply with ACI 301 (ACI 301M) and as follows when hot-weather conditions exist:

1. Cool ingredients before mixing to maintain concrete temperature below 90 deg F (32 deg C) at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated in total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Cover steel reinforcement with water-soaked burlap so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
3. Fog-spray forms**,** steel reinforcement, and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

3.7 FLOAT FINISHING

A. General: Do not add water to concrete surfaces during finishing operations.

B. Float Finish: Begin the second floating operation when bleed-water sheen has disappeared, and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats or by hand floating if area is small or inaccessible to power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture.

1. Paving Type 1 - Medium-to-Coarse-Textured Broom Finish: Provide a coarse finish by striating float-finished concrete surface 1/16 to 1/8 inch (1.6 to 3 mm) deep with a stiff-bristled broom, perpendicular to line of traffic.

3.8 SPECIAL FINISHES

A. Paving Type 2 - Monolithic Exposed-Aggregate Finish: Expose coarse aggregate in paving surface as follows:

1. Immediately after float finishing, spray-apply chemical surface retarder to paving according to manufacturer's written instructions.
2. Cover paving surface with plastic sheeting, sealing laps with tape, and remove when ready to continue finishing operations.
3. Without dislodging aggregate, remove mortar concealing the aggregate by lightly brushing surface with a stiff, nylon-bristle broom. Do not expose more than one-third of the average diameter of the aggregate and not more than one-half of the diameter of the smallest aggregate.
4. Fine-spray surface with water and brush. Repeat cycle of water flushing and brushing until cement film is removed from aggregate surfaces to depth required.

3.9 CONCRETE PROTECTION AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.

B. Comply with ACI 306.1 for cold-weather protection.

C. Evaporation Retarder: Apply evaporation retarder to concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h (1 kg/sq. m x h) before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete but before float finishing.

D. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.

E. Curing Methods: Cure concrete by moisture-retaining-cover curing or a combination of these as follows:

1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:

   a. Water.
   b. Continuous water-fog spray.
   c. Absorptive cover, water saturated and kept continuously wet. Cover concrete surfaces and edges with 12-inch (300-mm) lap over adjacent absorptive covers.

2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover, placed in widest practicable width, with sides and ends lapped at least 12 inches (300 mm) and sealed by waterproof tape or adhesive. Immediately repair any holes or tears occurring during installation or curing period using cover material and waterproof tape.

3.10 PAVING TOLERANCES

A. Comply with tolerances in ACI 117 and as follows:

1. Must meet grades of adjoining surfaces smooth and level.
2. Elevation: 3/4 inch (19 mm).
3. Thickness: Plus 3/8 inch (10 mm), minus 1/4 inch (6 mm).
4. Surface: Gap below 10-foot- (3-m-) long, unleveled straightedge not to exceed 1/2 inch (13 mm).
5. Alignment of Tie-Bar End Relative to Line Perpendicular to Paving Edge: 1/2 inch per 12 inches (13 mm per 300 mm) of tie bar.
6. Lateral Alignment and Spacing of Dowels: 1 inch (25 mm).
7. Vertical Alignment of Dowels: 1/4 inch (6 mm).
8. Alignment of Dowel-Bar End Relative to Line Perpendicular to Paving Edge: 1/4 inch per 12 inches (6 mm per 300 mm) of dowel.
9. Joint Spacing: 3 inches (75 mm).
10. Contraction Joint Depth: Plus 1/4 inch (6 mm), no minus.
11. Joint Width: Plus 1/8 inch (3 mm), no minus.

3.11 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Testing Services: Testing of composite samples of fresh concrete obtained according to ASTM C 172 shall be performed according to the following requirements:

1. Testing Frequency: Obtain at least one composite sample for each 100 cu. yd. (76 cu. m) or fraction thereof of each concrete mixture placed each day.

    a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

2. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
3. Air Content: ASTM C 231, pressure method; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
4. Concrete Temperature: ASTM C 1064/C 1064M; one test hourly when air temperature is 40 deg F (4.4 deg C) and below and when it is 80 deg F (27 deg C) and above, and one test for each composite sample.
5. Compression Test Specimens: ASTM C 31/C 31M; cast and laboratory cure one set of three standard cylinder specimens for each composite sample.
6. Compressive-Strength Tests: ASTM C 39/C 39M; test one specimen at seven days and two specimens at 28 days.

    a. A compressive-strength test shall be the average compressive strength from two specimens obtained from same composite sample and tested at 28 days.

C. Strength of each concrete mixture will be satisfactory if average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi (3.4 MPa).

D. Test results shall be reported in writing to Landscape Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.

E. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Landscape Architect but will not be used as sole basis for approval or rejection of concrete.

F. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Landscape Architect.

G. Concrete paving will be considered defective if it does not pass tests and inspections.

H. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

I. Prepare test and inspection reports.

3.12 REPAIRS AND PROTECTION

A. Remove and replace concrete paving that is broken, damaged, or defective or that does not comply with requirements in this Section. Remove work in complete sections from joint to joint unless otherwise approved by Landscape Architect.

B. Drill test cores, where directed by Landscape Architect, when necessary to determine magnitude of cracks or defective areas. Fill drilled core holes in satisfactory paving areas with portland cement concrete bonded to paving with epoxy adhesive.

C. Protect concrete paving from damage. Exclude traffic from paving for at least 14 days after placement. When construction traffic is permitted, maintain paving as clean as possible by removing surface stains and spillage of materials as they occur.

D. Maintain concrete paving free of stains, discoloration, dirt, and other foreign material. Sweep paving not more than two days before date scheduled for Substantial Completion inspections.

E. Cover finished cured concrete to protect from other construction activity.

SECTION 32 13 73 - CONCRETE PAVING JOINT SEALANTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cold-applied joint sealants.
2. Hot-applied joint sealants.
3. Joint-sealant backer materials.
4. Primers.

B. Related Requirements:

1. Section 079200 "Joint Sealants" for sealing nontraffic and traffic joints in locations not specified in this Section.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Concrete pavement joint sealants.
2. Joint-sealant backer materials.

B. Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type of joint sealant.

C. Samples for Verification: Actual sample of finished products for each kind and color of joint sealant required.

1. Size: Joint sealants in 1/2-inch-wide joints formed between two 6-inch-long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

D. Paving-Joint-Sealant Schedule: Include the following information:

1. Joint-sealant application, joint location, and designation.
2. Joint-sealant manufacturer and product name.
3. Joint-sealant formulation.
4. Joint-sealant color.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Statements: For Installer.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Installers: Entity that employs installers and supervisors who are trained and approved by manufacturer.

1.6 PRECONSTRUCTION TESTING

A. Preconstruction Testing: Performed by a qualified testing agency.

1.7 FIELD CONDITIONS

A. Do not proceed with installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F.
2. When joint substrates are wet.
3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

A. Obtain joint sealants from single manufacturer.

2.2 JOINT SEALANTS, GENERAL

A. Compatibility: Provide joint sealants, backer materials, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.

2.3 COLD-APPLIED JOINT SEALANTS

A. Single-Component, Nonsag, Silicone Joint Sealant: ASTM D5893/D5893M, Type NS.

B. Single-Component, Self-Leveling, Silicone Joint Sealant: ASTM D5893/D5893M, Type SL.

C. Multicomponent, Nonsag, Urethane, Elastomeric Joint Sealant: ASTM C920, Type M, Grade NS, Class 25, for Use T.

2.4 HOT-APPLIED JOINT SEALANTS

A. Hot-Applied, Single-Component Joint Sealant, Type I: ASTM D6690.

B. Hot-Applied, Single-Component Joint Sealant, Type I or Type II: ASTM D6690.

C. Hot-Applied, Single-Component Joint Sealant, Type I, II, or III: ASTM D6690.

D. Hot-Applied, Single-Component Joint Sealant, Type IV: ASTM D6690.

2.5 JOINT-SEALANT BACKER MATERIALS

A. Joint-Sealant Backer Materials: Nonstaining; compatible with joint substrates, sealants, primers, and other joint fillers; and approved for applications indicated by joint-sealant manufacturer, based on field experience and laboratory testing.

B. Round Backer Rods for Cold- and Hot-Applied Joint Sealants: ASTM D5249, Type 1, of diameter and density required to control sealant depth and prevent bottom-side adhesion of sealant.

C. Round Backer Rods for Cold-Applied Joint Sealants: ASTM D5249, Type 3, of diameter and density required to control joint-sealant depth and prevent bottom-side adhesion of sealant.

D. Backer Strips for Cold- and Hot-Applied Joint Sealants: ASTM D5249; Type 2; of thickness and width required to control joint-sealant depth, prevent bottom-side adhesion of sealant, and fill remainder of joint opening under sealant.

2.6 PRIMERS

A. Primers: Product recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine joints to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning of Joints: Before installing joint sealants, clean out joints immediately to comply with joint-sealant manufacturer's written instructions.

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.

B. Joint Priming: Prime joint substrates where indicated or where recommended in writing by joint-sealant manufacturer, based on preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions.

Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

3.3 INSTALLATION OF JOINT SEALANTS

A. Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated unless more stringent requirements apply.

B. Joint-Sealant Installation Standard: Comply with recommendations in ASTM C1193 for use of joint sealants as applicable to materials, applications, and conditions.

C. Install joint-sealant backers to support joint sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.

1. Do not leave gaps between ends of joint-sealant backer materials.
2. Do not stretch, twist, puncture, or tear joint-sealant backer materials.
3. Remove absorbent joint-sealant backer materials that have become wet before sealant application and replace them with dry materials.

D. Install joint sealants immediately following backer material installation, using proven techniques that comply with the following:

1. Place joint sealants so they fully contact joint substrates.
2. Completely fill recesses in each joint configuration.
3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

E. Tooling of Nonsag Joint Sealants: Immediately after joint-sealant application and before skinning or curing begins, tool sealants in accordance with the following requirements to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint:

1. Remove excess joint sealant from surfaces adjacent to joints.
2. Use tooling agents that are approved in writing by joint-sealant manufacturer and that do not discolor sealants or adjacent surfaces.

F. Provide joint configuration to comply with joint-sealant manufacturer's written instructions unless otherwise indicated.

3.4 CLEANING AND PROTECTION

A. Clean off excess joint sealant as the Work progresses, by methods and with cleaning materials approved in writing by joint-sealant manufacturers.

B. Protect joint sealants, during and after curing period, from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately and replace with joint sealant so installations in repaired areas are indistinguishable from the original work.

END OF SECTION

This page is intentionally left blank.

SECTION 32 13 73.33 - CONCRETE PAVING JOINT SEALANTS FOR SIDEWALKS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cold-applied joint sealants.
2. Joint-sealant backer materials.
3. Primers.

B. Related Requirements:

1. Section 079200 "Joint Sealants" for sealing nontraffic and traffic joints in locations not specified in this Section.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Concrete pavement joint sealants.
2. Joint-sealant backer materials.

B. Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type of joint sealant.

C. Samples for Verification: Actual sample of finished products for each kind and color of joint sealant required.

1. Size: Joint sealants in 1/2-inch- (13-mm-) wide joints formed between two 6-inch- (150-mm-) long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

D. Paving-Joint-Sealant Schedule: Include the following information:

1. Joint-sealant application, joint location, and designation.
2. Joint-sealant manufacturer and product name.
3. Joint-sealant formulation.
4. Joint-sealant color.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Statements: For Installer.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Installers: Entity that employs installers and supervisors who are trained and approved by manufacturer.

1.6 PRECONSTRUCTION TESTING

A. Preconstruction Testing: Performed by a qualified testing agency.

1.7 FIELD CONDITIONS

A. Do not proceed with installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F (5 deg C).
2. When joint substrates are wet.
3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

A. Obtain joint sealants from single manufacturer for each sealant type.

2.2 JOINT SEALANTS, GENERAL

A. Compatibility: Provide joint sealants, backer materials, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.

2.3 COLD-APPLIED JOINT SEALANTS

A. Multicomponent, Nonsag, Urethane, Elastomeric Joint Sealant: ASTM C920, Type M, Grade NS, Class 25, for Use T.

2.4 JOINT-SEALANT BACKER MATERIALS

A. Joint-Sealant Backer Materials: Nonstaining; compatible with joint substrates, sealants, primers, and other joint fillers; and approved for applications indicated by joint-sealant manufacturer, based on field experience and laboratory testing.

B. Round Backer Rods for Cold- and Hot-Applied Joint Sealants: ASTM D5249, Type 1, of diameter and density required to control sealant depth and prevent bottom-side adhesion of sealant.

C. Round Backer Rods for Cold-Applied Joint Sealants: ASTM D5249, Type 3, of diameter and density required to control joint-sealant depth and prevent bottom-side adhesion of sealant.

2.5 PRIMERS

A. Primers: Product recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine joints to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning of Joints: Before installing joint sealants, clean out joints immediately to comply with joint-sealant manufacturer's written instructions.

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.

B. Joint Priming: Prime joint substrates where indicated or where recommended in writing by joint-sealant manufacturer, based on preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

3.3 INSTALLATION OF JOINT SEALANTS

A. Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated unless more stringent requirements apply.

B. Joint-Sealant Installation Standard: Comply with recommendations in ASTM C1193 for use of joint sealants as applicable to materials, applications, and conditions.

C. Install joint-sealant backers to support joint sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.

1. Do not leave gaps between ends of joint-sealant backer materials.
2. Do not stretch, twist, puncture, or tear joint-sealant backer materials.
3. Remove absorbent joint-sealant backer materials that have become wet before sealant application and replace them with dry materials.

D. Install joint sealants immediately following backer material installation, using proven techniques that comply with the following:

1. Place joint sealants so they fully contact joint substrates.
2. Completely fill recesses in each joint configuration.
3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

E. Tooling of Nonsag Joint Sealants: Immediately after joint-sealant application and before skinning or curing begins, tool sealants in accordance with the following requirements to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint:

1. Remove excess joint sealant from surfaces adjacent to joints.
2. Use tooling agents that are approved in writing by joint-sealant manufacturer and that do not discolor sealants or adjacent surfaces.

F. Provide joint configuration to comply with joint-sealant manufacturer's written instructions unless otherwise indicated.

3.4 CLEANING AND PROTECTION

A. Clean off excess joint sealant as the Work progresses, by methods and with cleaning materials approved in writing by joint-sealant manufacturers.

B. Protect joint sealants, during and after curing period, from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately and replace with joint sealant so installations in repaired areas are indistinguishable from the original work.

END OF SECTION

SECTION 32 14 00 - UNIT PAVING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Stone pavers.

B. Related Requirements:

1. Section 07 14 13 “Hot Fluid-Applied Rubberized Asphalt Waterproofing” for waterproof membrane under setting bed.
2. Section 32 13 13 “Concrete Paving” for adjacent concrete paving materials.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data:

1. For materials other than water and aggregates.
2. For the following:

a. Pavers.
b. Mortar materials.

B. Samples for Verification:

1. Pavers: 12 by 12 inch units of each type of unit paver indicated.
2. Joint materials.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Material Certificates: For unit pavers. Include statements of material properties indicating compliance with requirements, including compliance with standards. Provide for each type and size of unit.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: A qualified unit paving installer. Installer's field supervisor must have Concrete Paver Installer Certification from the Interlocking Concrete Pavement Institute (ICPI) with the following designations:

1. Commercial Paver Technician Designation.

B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
2. Size: Four (4) full size pavers.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Store pavers on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied.

B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

C. Store liquids in tightly closed containers protected from freezing.

1.7 FIELD CONDITIONS

A. Cold-Weather Protection: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen subgrade or setting beds. Remove and replace unit paver work damaged by frost or freezing.

B. Weather Limitations for Mortar:

1. Cold-Weather Requirements: Comply with cold-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.
2. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6. Provide artificial shade and windbreaks and use cooled materials as required. Do not apply mortar to substrates with temperatures of 100 deg F and higher.

a. When ambient temperature exceeds 100 deg F, or when wind velocity exceeds 8 mph and ambient temperature exceeds 90 deg F, set pavers within 1 minute of spreading setting-bed mortar.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain each type of unit paver, joint material, and setting material from single source with resources to provide materials and products of consistent quality in appearance and physical properties.

2.2 STONE PAVERS

A. Granite Pavers: Rectangular paving slabs made from granite complying with ASTM C615/C615M.

1. Varieties and Sources: Subject to compliance with requirements, provide the following:

a. Black Hills Granites; Virginia Mist
b. Contact Information: 101 E. Culpeper Street, Suite 101, Culpeper, VA 22701; (540) 825-9044; sales@blackhillgranites.com.

2. Color and Grain: Dark gray with fine grain.
3. Finish: Thermal.
4. Match Architect's samples for color, finish, and other stone characteristics relating to aesthetic effects.
5. Thickness: Not less than 2 inches unless otherwise indicated.
6. Face Size: 24 by 24 inches.

2.3 MORTAR SETTING-BED MATERIALS

A. Regional Materials: To the extent required to comply with the minimum criteria specified in Section 01 81 13.14 “Sustainable Design Requirements,” manufacture aggregate for mortar and cement within 100 miles of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles of Project site.

B. Portland Cement: ASTM C150/C150M, Type I or Type II.

C. Sand: ASTM C144.

D. Latex Additive: Manufacturer's standard acrylic resin or styrene-butadiene-rubber water emulsion, serving as replacement for part or all of gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed portland cement and aggregate mortar bed, and not containing a retarder.

E. Water: Potable.

2.4 MORTAR MIXES

A. General: Comply with referenced standards and with manufacturers' written instructions for mix proportions, mixing equipment, mixer speeds, mixing containers, mixing times, and other procedures needed to produce setting-bed and joint materials of uniform quality and with

optimal performance characteristics. Discard mortars if they have reached their initial set before being used.

B. Latex-Modified, Portland Cement Setting-Bed Mortar: Proportion and mix portland cement, sand, and latex additive for setting bed to comply with written instructions of latex-additive manufacturer and as necessary to produce stiff mixture with a moist surface when bed is ready to receive pavers.

2.5 AGGREGATE JOINT MATERIALS

A. Sand for Joints: Fine, sharp, washed, natural sand or crushed stone with 100 percent passing No. 16 sieve and no more than 10 percent passing No. 200 sieve.

1. Provide polymeric sand of color needed to produce required joint color.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine surfaces indicated to receive unit paving, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Where unit paving is to be installed over waterproofing, examine waterproofing installation, with waterproofing Installer present, for protection from paving operations, including areas where waterproofing system is turned up or flashed against vertical surfaces.

C. Proceed with installation only after unsatisfactory conditions have been corrected and waterproofing protection is in place.

3.2 INSTALLATION, GENERAL

A. Do not use unit pavers with chips, cracks, voids, discolorations, or other defects that might be visible or cause staining in finished work.

B. Mix pavers from several pallets or cubes, as they are placed, to produce uniform blend of colors and textures.

C. Cut unit pavers with motor-driven masonry saw equipment to provide clean, sharp, unchipped edges. Cut units to provide pattern indicated and to fit adjoining work neatly. Use full units without cutting where possible. Hammer cutting is not acceptable.

D. Joint Pattern: As indicated.

E. Pavers over Waterproofing: Exercise care in placing pavers and setting materials over waterproofing so protection materials are not displaced and waterproofing is not punctured or otherwise damaged. Carefully replace protection materials that become displaced and arrange for repair of damaged waterproofing before covering with paving.

1. Provide joint filler at waterproofing that is turned up on vertical surfaces.

F. Tolerances:

1. Do not exceed 1/32-inch unit-to-unit offset from flush (lippage) or 1/8 inch in 10 feet from level, or indicated slope, for finished surface of paving.

3.3 MORTAR SETTING-BED APPLICATIONS

A. Apply mortar-bed bond coat over surface of subbase about 15 minutes before placing mortar bed. Do not exceed 1/16-inch thickness for bond coat. Limit area of bond coat to avoid its drying out before placing setting bed.

B. Apply mortar bed over bond coat; spread and screed mortar bed to uniform thickness at subgrade elevations required for accurate setting of pavers to finished grades indicated.

C. Mix and place only that amount of mortar bed that can be covered with pavers before initial set. Before placing pavers, cut back, bevel edge, and remove and discard setting-bed material that has reached initial set.

D. Place pavers before initial set of cement occurs. Immediately before placing pavers on mortar bed, apply uniform 1/16-inch-thick bond coat to mortar bed or to back of each paver with a flat trowel.

E. Tamp or beat pavers with a wooden block or rubber mallet to obtain full contact with setting bed and to bring finished surfaces within indicated tolerances. Set each paver in a single operation before initial set of mortar; do not return to areas already set or disturb pavers for purposes of realigning finished surfaces or adjusting joints.

F. Spaced Joint Widths: Provide hand-tight joints.

G. Joint Installation:

1. Ensure pavers are completely dry.
2. Do not install in temperatures below 32 deg F.
3. Install polymeric joint material according to manufacturer’s written instructions including, but not limited to the following procedure:

a. Spread loose joint material over entire paver surface.
b. Sweep joint material to fully fill joints.
c. Sweep off excess joint material.
d. Protect paver surface and compact filled joints.
e. Wet joints with successive passes with a hose sprayer.
f. Blow off any excess water.

3.4 REPAIRING, POINTING, AND CLEANING

A. Remove and replace unit pavers that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Provide new units to match adjoining units and install in same manner as original units, with same joint treatment and with no evidence of replacement.

END OF SECTION

SECTION 32 17 13 - PARKING BUMPERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Precast concrete wheel stops.
2. Resilient wheel stops.
3. Resilient-shell, concrete-filled wheel stops.

1.2 ACTION SUBMITTALS

A. Product Data:

1. Precast concrete wheel stops.
2. Resilient wheel stops.
3. Resilient-shell, concrete-filled wheel stops

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

C. Samples for Verification: For wheel stops, 6 inches long, showing color and cross section; with mounting hardware.

PART 2 - PRODUCTS

2.1 PARKING BUMPERS

A. Precast Concrete Wheel Stops: Precast, steel-reinforced, air-entrained concrete; 4000-psi minimum compressive strength; manufacturer's standard height and width by 72 inches long. Provide chamfered corners and a minimum of two factory-formed or -drilled vertical holes through wheel stop for anchoring to substrate.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. American Eagle Precast, LLC.
b. American Precast Concrete Inc.
c. Bush Concrete Products, Inc.
d. Cast-Crete USA, Inc.
e. Dura-Crete, Inc.

f. Oldcastle Infrastructure Inc.; CRH Americas.
g. Steps Plus, Inc.

2. Source Limitations: Obtain wheel stops from single source from single manufacturer.
3. Surface Appearance: Smooth, free of pockets, sand streaks, honeycombs, and other obvious defects. Corners shall be uniform, straight, and sharp.
4. Mounting Hardware: Galvanized-steel hardware as standard with wheel-stop manufacturer for mounting on concrete slab as indicated on Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that pavement is in suitable condition to begin installation in accordance with manufacturer's written instructions.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install wheel stops in accordance with manufacturer's written instructions unless otherwise indicated.

B. Securely anchor wheel stops to substrate with hardware in each preformed vertical hole in wheel stop as recommended in writing by manufacturer. Recess head of hardware beneath top of wheel stop.

END OF SECTION

SECTION 32 17 23 - PAVEMENT MARKINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Painted markings applied to asphalt paving.
2. Painted markings applied to concrete surfaces.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to marking asphalt paving or concrete surfaces including, but not limited to, the following:

    a. Asphalt-paving or concrete-surface aging period before application of pavement markings.
    b. Review requirements for protecting pavement markings, including restriction of traffic during installation period.

1.4 ACTION SUBMITTALS

A. Product Data: Include technical data and tested physical and performance properties.

1. Pavement-marking paint, acrylic.

B. Shop Drawings:

1. Indicate pavement markings, colors, lane separations, defined parking spaces, and dimensions to adjacent work.
2. Indicate, with international symbol of accessibility, spaces allocated for people with disabilities.

1.5 QUALITY ASSURANCE

A. Regulatory Requirements: Comply with materials, workmanship, and other applicable requirements of Standards and Specifications of Maryland State Highway Administration for pavement-marking work.

1. Measurement and payment provisions and safety program submittals included in standard specifications do not apply to this Section.

1.6 FIELD CONDITIONS

A. Environmental Limitations: Proceed with pavement marking only on clean, dry surfaces and at a minimum ambient or surface temperature of 55 deg F for water-based materials, and not exceeding 95 deg F.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain pavement-marking paints from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Accessibility Standard: Comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design".

2.3 PAVEMENT-MARKING PAINT

A. Pavement-Marking Paint, Acrylic: Acrylic, waterborne emulsion, lead and chromate free, ready mixed, complying with FS TT-P-1952F, Type II, with drying time of less than 45 minutes.

1. Color: As indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that pavement-marking substrate is dry and in suitable condition to begin pavement marking in accordance with manufacturer's written instructions.

B. Proceed with pavement marking only after unsatisfactory conditions have been corrected.

3.2 PAVEMENT MARKING

A. Do not apply pavement-marking paint until layout, colors, and placement have been verified with Architect.

B. Allow asphalt paving or concrete surfaces to age for a minimum of 30 days before starting pavement marking.

C. Sweep and clean surface to eliminate loose material and dust.

D. Apply paint with mechanical equipment to produce pavement markings, of dimensions indicated, with uniform, straight edges. Apply at manufacturer's recommended rates to provide a minimum wet film thickness of 15 mils.

1. Apply graphic symbols and lettering with paint-resistant, die-cut stencils, firmly secured to asphalt paving or concrete surface. Mask an extended area beyond edges of each stencil to prevent paint application beyond stencil. Apply paint so that it cannot run beneath stencil.

3.3 PROTECTING AND CLEANING

A. Protect pavement markings from damage and wear during remainder of construction period.

B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

This page is intentionally left blank.

SECTION 32 17 26 - TACTILE WARNING SURFACING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Detectable warning mats.

B. Related Requirements:

1. Section 321313 "Concrete Paving" for concrete walkways serving as substrates for tactile warning surfacing.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For tactile warning surfacing, to include in maintenance manuals.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.6 PROJECT CONDITIONS

A. Cold-Weather Protection: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen subgrade or setting beds. Remove and replace unit paver work damaged by frost or freezing.

B. Weather Limitations for Adhesive Application:

1. Apply adhesive only when ambient temperature is above 50 deg F and when temperature has not been below 35 deg F for 12 hours immediately before application. Do not apply when substrate is wet or contains excess moisture.

C. Weather Limitations for Mortar and Grout:

1. Cold-Weather Requirements: Comply with cold-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.
2. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602. Provide artificial shade and windbreaks, and use cooled materials as required. Do not apply mortar to substrates with temperatures of 100 deg F and higher.

    a. When ambient temperature exceeds 100 deg F, or when wind velocity exceeds 8 mph and ambient temperature exceeds 90 deg F, set unit pavers within 1 minute of spreading setting-bed mortar.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of tactile warning surfaces that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

    a. Deterioration of finishes beyond normal weathering and wear.
    b. Separation or delamination of materials and components.

2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 TACTILE WARNING SURFACING, GENERAL

A. Accessibility Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities for tactile warning surfaces.

1. For tactile warning surfaces composed of multiple units, provide units that when installed provide consistent side-to-side and end-to-end dome spacing that complies with requirements.

B. Source Limitations: Obtain each type of tactile warning surfacing, joint material, setting material, anchor, and fastener from single source with resources to provide materials and products of consistent quality in appearance and physical properties.

2.2 DETECTABLE WARNING MATS

A. Surface-Applied Detectable Warning Mats: Accessible truncated-dome detectable warning resilient mats, UV resistant, manufactured for adhering to existing concrete walkway surfaces, with slip-resistant surface treatment on domes, field of mat, and beveled outside edges.
1. Material: Modified rubber compound, UV resistant.
2. Color: As indicated by manufacturer's designations.
3. Shapes and Sizes:

    a. Rectangular panel, 24 by 48 inches.

4. Dome Spacing and Configuration: Manufacturer's standard compliant spacing in manufacturer's standard pattern.
5. Mounting: Adhered to pavement surface with adhesive and fastened with fasteners.

2.3 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of tactile warning surfaces, noncorrosive and compatible with each material joined, and complying with the following:

1. Furnish Type 304 stainless-steel fasteners for exterior use.
2. Fastener Heads: For nonstructural connections, use flathead or oval countersunk screws and bolts with tamper-resistant heads, colored to match tile.

B. Adhesive: As recommended by manufacturer for adhering tactile warning surfacing unit to pavement.

C. Sealant: As recommended by manufacturer for sealing perimeter of tactile warning surfacing unit.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that pavement is in suitable condition to begin installation according to manufacturer's written instructions. Verify that installation of tactile warning surfacing will comply with accessibility requirements upon completion.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF TACTILE WARNING SURFACING

A. General: Prepare substrate and install tactile warning surfacing according to manufacturer's written instructions unless otherwise indicated.

B. Place tactile warning surfacing units in dimensions and orientation indicated. Comply with location requirements of AASHTO MP 12.

3.3 INSTALLATION OF DETECTABLE WARNING MATS

A. Lay out detectable warning mats as indicated and mark concrete pavement at edges of mats.

B. Prepare existing paving surface by grinding and cleaning as recommended by manufacturer.

C. Apply adhesive to back of mat in amounts and pattern recommended by manufacturer, and set mat in place. Firmly seat mat in adhesive bed, eliminating air pockets and establishing full adhesion to pavement. If necessary, temporarily apply weight to mat to ensure full contact with adhesive.

D. Install anchor devices through face of mat and into pavement using anchors located as recommended by manufacturer. Set heads of anchors flush with mat surface.

E. Mask mat perimeter and adjacent concrete, and apply sealant in continuous bead around perimeter of mat.

F. Remove masking, adhesive, excess sealant, and soil from exposed surfaces of detectable warning mat and surrounding concrete pavement using cleaning agents recommended in writing by manufacturer.

G. Protect installed mat from traffic until adhesive has set.

3.4 CLEANING AND PROTECTION

A. Remove and replace tactile warning surfacing that is broken or damaged or does not comply with requirements in this Section. Remove in complete sections from joint to joint unless otherwise approved by Architect. Replace using tactile warning surfacing installation methods acceptable to Architect.

B. Protect tactile warning surfacing from damage and maintain free of stains, discoloration, dirt, and other foreign material.

END OF SECTION

SECTION 32 31 19 - DECORATIVE METAL GATES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Swing gates.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For gates.

1. Include plans, elevations, sections, and mounting attachment details.
2. Indicate all hardware.

C. Samples: For each fence material and for each color specified.

1. Provide Samples 12 inches in length for linear materials.
2. Provide Samples 12 inches square for louver infill.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Design decorative metal gates including hinges to support self-weight in all positions and lateral wind loads based on the following:

1. Wind Exposure Category: As indicated on Drawings.
2. Design Wind Speed: As indicated on Drawings.

2.2 SWING GATES

A. Basis-of-Design Product: Subject to compliance with requirement, provide **PalmShield; Maximus Swing Gate** or comparable product.

B. Gate Configuration: As indicated.

C. Gate Frame Height: As indicated.

D. Gate Opening Width: As indicated.

E. Aluminum Gate Leaf Frames: Fabricate gate leaf frame from 4 by 2 inch rectangular extruded-aluminum tubes with 3 by 3 by 1/4 inch angle infill panel frame.

F. Frame Corner Construction: Welded.

G. Infill: Aluminum, 6 by 1 inch tubular tongue and groove slats secured in place by aluminum infill retaining angles; PalmShield EMS #41-63-729.

H. Hardware: Latches permitting operation from both sides of gate, hinges, and keepers for each gate leaf more than 5 feet wide. Provide center gate stops and cane bolts for pairs of gates.

I. Latch and Lock: Manufacturer's standard cipher lock with latch with handles permitting operation of gate from both sides of gate manufactured for exterior exposure.

J. Hinges: Industrial grade, heavy-duty barrel hinge with ball bearings and grease zert designed to support load of open gate without sagging; bolted to gate frame and field welded to steel gate post.

1. Basis-of-Design Product: Subject to compliance with requirement, provide **PalmShield; Gorilla Hinge** or comparable product.
2. Rod: 3/4 inch.
3. Hinge Plates: 1/2 inch thick offset to create a 5/8 inch gap.

K. Cane Bolts: Provide for inactive leaf of pairs of gates. Fabricated from 1-inch-diameter, round steel bar or pipe, hot-dip galvanized after fabrication. Finish to match gates. Provide galvanized-steel pipe strikes to receive cane bolts in closed position. Secure to gate from with 1/8 inch steel bracket with padlockable slide bolt.

L. Finish exposed welds to comply with NOMMA Guideline 1, Finish #2 - completely sanded joint, some undercutting and pinholes okay.

M. Aluminum Finish: Baked enamel or powder coating.

2.3 ALUMINUM

A. Aluminum, General: Provide alloys and tempers with not less than the strength and durability properties of alloy and temper designated in paragraphs below for each aluminum form required.

B. Extrusions: ASTM B221, Alloy 6063-T5.

C. Tubing: ASTM B429/B429M, Alloy 6063-T6.

D. Plate and Sheet: ASTM B209, Alloy 6061-T6.

E. Die and Hand Forgings: ASTM B247, Alloy 6061-T6.

F. Castings: ASTM B26/B26M, Alloy A356.0-T6.

2.4 ALUMINUM FINISHES

A. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 2 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

1. Color and Gloss: As preselected and indicated in Finish Schedule.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for site clearing, earthwork, pavement work, construction layout, and other conditions affecting performance of the Work.

B. Do not begin installation before final grading is completed unless otherwise permitted by Architect.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 GATE INSTALLATION

A. Install gates according to manufacturer's written instructions, level, plumb, and secure for full opening without interference. Attach hardware using tamper-resistant or concealed means. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation and lubricate where necessary.

3.3 ADJUSTING

A. Gates: Adjust gates to operate smoothly, easily, and quietly, free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.

B. Lubricate hardware and other moving parts.

END OF SECTION

This page is intentionally left blank.

SECTION 32 91 15 - SOIL PREPARATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes planting soils and layered soil assemblies specified according to performance requirements of the mixes.

B. Related Requirements:

1. Division 31 Section “Earth Moving” for excavation, filling, and rough grading and for subsurface aggregate drainage and drainage backfill materials
2. Division 32 Section “Lawns & Turfgrasses" for turfgrass plantings.
3. Division 32 Section "Exterior Plants" for placing planting soil for plantings.

1.3 DEFINITIONS

A. AAPFCO: Association of American Plant Food Control Officials.

B. Backfill: The earth used to replace or the act of replacing earth in an excavation. This can be amended or unamended soil as indicated.

C. CEC: Cation exchange capacity.

D. Compost: The product resulting from the controlled biological decomposition of organic material that has been sanitized through the generation of heat and stabilized to the point that it is beneficial to plant growth.

E. Duff Layer: A surface layer of soil, typical of forested areas, that is composed of mostly decayed leaves, twigs, and detritus.

F. Imported Soil: Soil that is transported to Project site for use.

G. Layered Soil Assembly: A designed series of planting soils, layered on each other, that together produce an environment for plant growth.

H. Manufactured Soil: Soil produced by blending soils, sand, stabilized organic soil amendments, and other materials to produce planting soil.

I. NAPT: North American Proficiency Testing Program. An SSSA program to assist soil-, plant-, and water-testing laboratories through interlaboratory sample exchanges and statistical evaluation of analytical data.

J. Organic Matter: The total of organic materials in soil exclusive of undecayed plant and animal tissues, their partial decomposition products, and the soil biomass; also called "humus" or "soil organic matter."

K. Planting Soil: Existing, on-site soil; imported soil; or manufactured soil that has been modified as specified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.

L. RCRA Metals: Hazardous metals identified by the EPA under the Resource Conservation and Recovery Act.

M. SSSA: Soil Science Society of America.

N. Subgrade: Surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.

O. Subsoil: Soil beneath the level of subgrade; soil beneath the topsoil layers of a naturally occurring soil profile, typified by less than 1 percent organic matter and few soil organisms.

P. Surface Soil: Soil that is present at the top layer of the existing soil profile. In undisturbed areas, surface soil is typically called "topsoil"; but in disturbed areas such as urban environments, the surface soil can be subsoil.

Q. USCC: U.S. Composting Council.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include recommendations for application and use.
2. Include test data substantiating that products comply with requirements.
3. Include sieve analyses for aggregate materials.
4. Material Certificates: For each type of imported soil and soil amendment and fertilizer before delivery to the site, according to the following:

    a. Manufacturer's qualified testing agency's certified analysis of standard products.
    b. Analysis of fertilizers, by a qualified testing agency, made according to AAPFCO methods for testing and labeling and according to AAPFCO's SUIP #25.
    c. Analysis of nonstandard materials, by a qualified testing agency, made according to SSSA methods, where applicable.

B. Samples: For each bulk-supplied material, 1-quart (1-L) volume of each in sealed containers labeled with content, source, and date obtained. Each Sample shall be typical of the lot of material to be furnished; provide an accurate representation of composition, color, and texture.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For each testing agency.

B. Preconstruction Test Reports: For preconstruction soil analyses specified in "Preconstruction Testing" Article.

C. Field quality-control reports.

1.7 QUALITY ASSURANCE

A. Testing Agency Qualifications: An independent, state-operated, or university-operated laboratory; experienced in soil science, soil testing, and plant nutrition; with the experience and capability to conduct the testing indicated; and that specializes in types of tests to be performed.

1.8 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction soil analyses on existing, on-site soil and imported soil.

1. Notify Landscape Architect seven days in advance of the dates and times when laboratory samples will be taken.

B. Preconstruction Soil Analyses: For each unamended soil type, perform testing on soil samples and furnish soil analysis and a written report containing soil-amendment and fertilizer recommendations by a qualified testing agency performing the testing according to "Soil-Sampling Requirements" and "Testing Requirements" articles.

1. Have testing agency identify and label samples and test reports according to sample collection and labeling requirements.

1.9 SOIL-SAMPLING REQUIREMENTS

A. General: Extract soil samples according to requirements in this article.

B. Sample Collection and Labeling: Have samples taken and labeled by Contractor a soil scientist (CPSS) certified by SSSA, soil scientist (RPSS) registered by the National Society of Consulting Soil Scientists or state-certified, -licensed, or -registered soil scientist under the direction of the testing agency.

1. Number and Location of Samples: Minimum of three representative soil samples from areas representing each of the nine soil conditions indicated on Drawings and where directed by Landscape Architect for each soil to be used or amended for landscaping purposes.

2. Procedures and Depth of Samples: According to USDA-NRCS's "Field Book for Describing and Sampling Soils"
3. Division of Samples: Split each sample into two, equal parts. Send half to the testing agency and half to Owner for their records.
4. Labeling: Label each sample with the date, location keyed to a site plan or other location system, visible soil condition, and sampling depth.

1.10 TESTING REQUIREMENTS

A. General: Perform tests on soil samples according to requirements in this article.

B. Physical Testing:

1. Soil Texture: Soil-particle, size-distribution analysis by one of the following methods according to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods":

   a. Sieving Method: Report sand-gradation percentages for very coarse, coarse, medium, fine, and very fine sand; and fragment-gradation (gravel) percentages for fine, medium, and coarse fragments; according to USDA sand and fragment sizes.
   b. Hydrometer Method: Report percentages of sand, silt, and clay.

2. Bulk Density: Analysis according to core method and clod method of SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."
3. Total Porosity: Calculate using particle density and bulk density according to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."
4. Water Retention: According to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."
5. Saturated Hydraulic Conductivity: According to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods"; at 85 percent compaction according to ASTM D698 (Standard Proctor).

C. Chemical Testing:

1. CEC: Analysis by sodium saturation at pH 7 according to SSSA's "Methods of Soil Analysis - Part 3- Chemical Methods."
2. Clay Mineralogy: Analysis and estimated percentage of expandable clay minerals using CEC by ammonium saturation at pH 7 according to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."
3. Phytotoxicity: Test for plant-available concentrations of phytotoxic minerals including aluminum, arsenic, barium, cadmium, chlorides, chromium, cobalt, copper, lead, lithium, mercury, nickel, selenium, silver, sodium, strontium, tin, titanium, vanadium, and zinc.

D. Fertility Testing: Soil fertility analysis according to standard laboratory protocol of SSSA NAPT NEC-67 including the following:

1. Percentage of organic matter.
2. CEC, calcium percent of CEC, and magnesium percent of CEC.
3. Soil reaction (acidity/alkalinity pH value).
4. Buffered acidity or alkalinity.
5. Nitrogen ppm.
6. Phosphorous ppm.

7. Potassium ppm.
8. Manganese ppm.
9. Manganese-availability ppm.
10. Zinc ppm.
11. Zinc availability ppm.
12. Copper ppm.
13. Sodium ppm and sodium absorption ratio.
14. Soluble-salts ppm.
15. Presence and quantities of problem materials including salts and metals cited in the Standard protocol. If such problem materials are present, provide additional recommendations for corrective action.
16. Other deleterious materials, including their characteristics and content of each.

E. Organic-Matter Content: Analysis using loss-by-ignition method according to SSSA's "Methods of Soil Analysis - Part 3-Chemical Methods."

F. Recommendations: Based on the test results and designated plant material, state recommendations for soil treatments and soil amendments to be incorporated to produce satisfactory planting soil suitable for healthy, viable plants. Include, at a minimum, recommendations for nitrogen, phosphorous, and potassium fertilization, and for micronutrients.

1. Fertilizers and Soil Amendment Rates: State recommendations in weight per 1000 sq. ft. (100 sq. m) for each depth soil depth required.

G. Soil Reaction: State the recommended liming rates for raising pH or sulfur for lowering pH according to the buffered acidity or buffered alkalinity in weight per 1000 sq. ft. (100 sq. m) for each depth soil depth required.

1.11 DELIVERY, STORAGE, AND HANDLING

A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and compliance with state and Federal laws if applicable.

B. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Do not move or handle materials when they are wet or frozen.
4. Accompany each delivery of bulk fertilizers and soil amendments with appropriate certificates.

PART 2 - PRODUCTS

2.1 PLANTING SOILS SPECIFIED ACCORDING TO PERFORMANCE REQUIREMENTS

A. Base Soil: Testing and analysis are required to determine if existing on-site soil may be used as the base component for planting soil. Where quantity and quality of existing site soil is insufficient, soil imported from off-site locations that has been tested and approved shall be provided. The following Planting Soil Types describe the conditions required for suitable planting soil that incorporates either on-site surface soil or imported soil as the base component. At a minimum the base soil must meet the following criteria:

1. Base Soil shall be fertile, friable soil containing 15% or less of a total volume of the combination of subsoil, refuse, roots larger than 25mm (1-inch) diameter, clumps of heavy, sticky or stiff clay, stones larger than 75mm (3 inches) in diameter, noxious seeds, sticks, brush, litter, or any substances deleterious to plant growth. The percent (%) of the above objects shall be controlled by source selection, *not by screening the soil*. Base Soil shall be suitable for the germination of seeds and the support of vegetative growth. Base Soil shall not contain weed seeds in quantities that cause noticeable weed growth and hazardous weed species in the planting beds. The contractor shall remove all weeds as they emerge.

2. Particle Size Distribution by USDA Textures: Classified as sandy clay loam according to USDA textures and as follows:

   a. Clay: 20 – 32%
   b. Silt: 5-25%
   c. Sand: 50-70%

B. Amended Soil: Existing, suitable, on-site surface soil, with the duff layer, if any, retained; and stockpiled on-site; modified to produce viable planting soil for the conditions and intended plant material. Using preconstruction soil analyses and materials specified in other articles of this Section, amend existing, on-site surface soil to become planting soil complying with the following requirements:

1. Particle Size Distribution by USDA Textures: Classified as sandy loam according to USDA textures;
2. Additional requirements for Soil Chemical and Structural qualities shall be provided as part of final construction document issuance.

C. Imported Soil: Imported, naturally formed soil from off-site sources and consisting of sandy loam soil according to USDA textures; and modified to produce viable planting soil for the conditions and intended plant material. Amend imported soil with materials specified in other articles of this Section to become planting soil complying with the following requirements:

1. Sources: Take imported, unamended soil from sources that are naturally well-drained sites where topsoil occurs at least 4 inches (100 mm) deep, not from agricultural land, bogs, or marshes; and that do not contain undesirable organisms; disease-causing plant pathogens; or obnoxious weeds and invasive plants including, but not limited to, quackgrass, Johnsongrass, poison ivy, nutsedge, nimblewill, Canada thistle, bindweed, bentgrass, wild garlic, knotweed, mugwort, ground ivy, perennial sorrel, and bromegrass.

2. Additional Properties of Imported Soil before Amending: Minimum of 3-5 percent organic-matter content, friable, and with sufficient structure to give good tilth and aeration. Clean soil to be of the following:

    a. Unacceptable Materials: Concrete slurry, concrete layers or chunks, cement, plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, and other extraneous materials that are harmful to plant growth.
    b. Unsuitable Materials: Stones, roots, plants, sod, clay lumps, and pockets of coarse sand that exceed a combined maximum of 8 percent by dry weight of the imported soil.
    c. Large Materials: Stones, clods, roots, clay lumps, and pockets of coarse sand exceeding 3 inches (75 mm).

3. Additional requirements for Soil Chemical and Structural qualities shall be provided as part of final construction document issuance.

D. Planting-Soil Type 3: Manufactured soil consisting of manufacturer's basic sandy loam according to USDA textures blended in a manufacturing facility with sand, stabilized organic soil amendments, and other materials as specified in other articles of this Section to produce viable planting soil.

1. Basic Properties: Manufactured soil shall not contain the following:

    a. Unacceptable Materials: Concrete slurry, concrete layers or chunks, cement, plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, and other extraneous materials that are harmful to plant growth.
    b. Unsuitable Materials: Stones, roots, plants, sod, clay lumps, and pockets of coarse sand that exceed a combined maximum of 5 percent by dry weight of the manufactured soil.
    c. Large Materials: Stones, clods, roots, clay lumps, and pockets of coarse sand exceeding 2 inches (50 mm) in any dimension.

2.2 INORGANIC SOIL AMENDMENTS

A. Lime: ASTM C602, agricultural liming material containing a minimum of 80 percent calcium carbonate equivalent and as follows:

1. Class: O, with a minimum of 95 percent passing through No. 8 (2.36-mm) sieve and a minimum of 55 percent passing through a No. 60 (0.25-mm) sieve.
2. Form: Provide lime in the form of ground dolomitic limestone.

B. Sulfur: Granular, biodegradable, and containing a minimum of 90 percent elemental sulfur, with a minimum of 99 percent passing through a No. 6 (3.35-mm) sieve and a maximum of 10 percent passing through a No. 40 (0.425-mm) sieve.

C. Iron Sulfate: Granulated ferrous sulfate containing a minimum of 20 percent iron and 10 percent sulfur.

D. Agricultural Gypsum: Minimum 90 percent calcium sulfate, finely ground with 90 percent passing through a No. 50 (0.30-mm) sieve.

E. Sand: Clean, washed, natural or manufactured, free of toxic materials, and according to ASTM C33/C33M.

2.3 ORGANIC SOIL AMENDMENTS

A. Compost: Well-composted, stable, and certified weed-free organic matter produced by composting feedstock, and bearing USCC's "Seal of Testing Assurance," and as follows:

1. Feedstock: Limited to leaves.
2. Reaction: pH of 5.5 to 8.
3. Soluble-Salt Concentration: Less than 6 dS/m.
4. Moisture Content: 35 to 55 percent by weight.
5. Organic-Matter Content: less than 35 percent of dry weight.
6. Particle Size: Minimum of 98 percent passing through a 1/2-inch (13-mm) sieve.

B. Wood Derivatives: Shredded and composted, nitrogen-treated sawdust, ground bark, or wood waste; of uniform texture and free of chips, stones, sticks, soil, or toxic materials.

C. Manure: Well-rotted, unleached, stable or cattle manure containing not more than 25 percent by volume of straw, sawdust, or other bedding materials; certified free of toxic substances, stones, sticks, soil, weed seed, debris, and material harmful to plant growth.

2.4 FERTILIZERS

A. Superphosphate: Commercial, phosphate mixture, soluble; a minimum of 20 percent available phosphoric acid.

B. Commercial Fertilizer: Commercial-grade complete fertilizer of neutral character, consisting of fast- and slow-release nitrogen, 50 percent derived from natural organic sources of urea formaldehyde, phosphorous, and potassium in the following composition:

1. Composition: 1 lb/1000 sq. ft. (0.5 kg/100 sq. m) of actual nitrogen, 4 percent phosphorous, and 2 percent potassium, by weight.
2. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified testing agency.

C. Slow-Release Fertilizer: Granular or pelleted fertilizer consisting of 50 percent water-insoluble nitrogen, phosphorus, and potassium in the following composition:

1. Composition: 20 percent nitrogen, 10 percent phosphorous, and 10 percent potassium, by weight.
2. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified testing agency.

D. Chelated Iron: Commercial-grade FeEDDHA for dicots and woody plants, and commercial-grade FeDTPA for ornamental grasses and monocots.

PART 3 - EXECUTION

3.1 GENERAL

A. Place planting soil and fertilizers according to requirements in other Specification Sections.

B. Verify in writing that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in planting soil.

C. Proceed with placement only after unsatisfactory conditions have been corrected.

3.2 PREPARATION OF UNAMENDED, ON-SITE SOIL BEFORE AMENDING

A. Follow soil testing requirements and receive approval prior to using on-site soil as a component of any planting soil mix types.

B. Unacceptable Materials: Clean soil of concrete slurry, concrete layers or chunks, cement, plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, and other extraneous materials that are harmful to plant growth.

C. Unsuitable Materials: Clean soil to contain a combined maximum of 8 percent by dry weight of stones, roots, plants, sod, clay lumps, and pockets of coarse sand.

3.3 PLACING AND MIXING PLANTING SOIL OVER EXPOSED SUBGRADE

A. General: Apply and mix unamended soil with amendments on-site to produce required planting soil unless otherwise noted. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet.

B. Subgrade Preparation: Till subgrade to a minimum depth of 4 inches (100 mm). Remove stones larger than 1-1/2 inches (38 mm) in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off Owner's property.

1. Apply, add soil amendments, and mix approximately half the thickness of unamended soil over prepared, loosened subgrade according to "Mixing" Paragraph below. Mix thoroughly into top 2 inches (50 mm) of subgrade. Spread remainder of planting soil.

C. Mixing: Spread unamended soil to total depth indicated on Drawings, but not less than required to meet finish grades after mixing with amendments and natural settlement. Do not spread if soil or subgrade is frozen, muddy, or excessively wet.

1. Amendments: Apply soil amendments, except compost, and fertilizer, if required, evenly on surface, and thoroughly blend them with unamended soil to produce planting soil.

a. Mix lime and sulfur, if required, with dry soil before mixing fertilizer.
b. Mix fertilizer with planting soil no more than seven days before planting.

2. Lifts: Apply and mix unamended soil and amendments in lifts not exceeding 8 inches (200 mm) in loose depth for material compacted by compaction equipment, and not more than 4 inches (100 mm) in loose depth for material compacted by hand-operated tampers.

D. Compaction: Compact each blended lift of planting soil to 80 to 85 percent of maximum Standard Proctor density according to ASTM D698 except where a different compaction value is indicated under DDOT or DC standards.

E. Finish Grading: Grade planting soil to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

3.4 PLACING MANUFACTURED PLANTING SOIL OVER EXPOSED SUBGRADE

A. General: Apply manufactured soil on-site in its final, blended condition. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet.

B. Subgrade Preparation: Till subgrade to a minimum depth of 4 inches (100 mm). Remove stones larger than 1-1/2 inches (38 mm) in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off Owner's property.

1. Apply approximately half the thickness of planting soil over prepared, loosened subgrade. Mix thoroughly into top 2 inches (50 mm) of subgrade. Spread remainder of planting soil.

C. Application: Spread planting soil to total depth indicated on Drawings but not less than required to meet finish grades after natural settlement. Do not spread if soil or subgrade is frozen, muddy, or excessively wet.

1. Lifts: Apply planting soil in lifts not exceeding 8 inches (200 mm) in loose depth for material compacted by compaction equipment, and not more than 4 inches (100 mm) in loose depth for material compacted by hand-operated tampers.

D. Compaction: Compact each lift of planting soil to 80 to 85 percent of maximum Standard Proctor density according to ASTM D698 except where a different compaction value is indicated by DDOT or DC standards.

E. Finish Grading: Grade planting soil to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Perform the following tests and inspections:

1. Compaction: Test planting-soil compaction after placing each lift and at completion using a densitometer or soil-compaction meter calibrated to a reference test value based on laboratory testing according to ASTM D698. Space tests at no less than one for each 1000 sq. ft. (100 sq. m) of in-place soil or part thereof.

2. Performance Testing: For each amended planting-soil type, demonstrating compliance with specified performance requirements.

    a. Perform testing according to "Soil-Sampling Requirements" and "Testing Requirements" articles.
    b. Perform tests before after amendments and before placement.
    c. Perform tests after placement.
    d. Perform tests with Landscape Architect present.

C. Soil will be considered defective if it does not pass tests and inspections. If planting soil or subgrade is over-compacted, disturbed, or contaminated by foreign or deleterious materials or liquids, remove the planting soil and contamination; restore the subgrade as directed by Landscape Architect and replace contaminated planting soil with new planting soil.

D. Prepare test and inspection reports.

E. Label each sample and test report with the date, location keyed to a site plan or other location system, visible conditions when and where sample was taken, and sampling depth.

3.6 PROTECTION

A. Protection Zone: Identify protection zones according to Section 015639 "Temporary Tree and Plant Protection."

B. Protect areas of in-place soil from additional compaction, disturbance, and contamination. Prohibit the following practices within these areas except as required to perform planting operations:

1. Storage of construction materials, debris, or excavated material.
2. Parking vehicles or equipment.
3. Vehicle traffic.
4. Foot traffic.
5. Erection of sheds or structures.
6. Impoundment of water.
7. Excavation or other digging unless otherwise indicated.

3.7 CLEANING

A. Protect areas adjacent to planting-soil preparation and placement areas from contamination. Keep adjacent paving and construction clean and the work area in an orderly condition.

B. Remove surplus soil and waste material including excess subsoil, unsuitable materials, trash, and debris and legally dispose of them off Owner's property unless otherwise indicated.

1. Dispose of excess subsoil and unsuitable materials on-site where directed by Owner.

END OF SECTION

This page is intentionally left blank.

SECTION 32 92 00 - LAWNS AND TURFGRASSES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Seeding.
2. Sodding.
3. Lawn renovation.

B. Related Sections include the following:

1. Division 31 Section "Site Clearing" for topsoil stripping and stockpiling.
2. Division 31 Section "Earth Moving" for excavation, filling and backfilling, and rough grading.
3. Division 32 Section "Soil Preparation" for soil preparation of areas to receive lawns and grasses.
4. Division 32 Section “Exterior Plants” for bed dividers and stormwater grasses.

1.2 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Certification of Grass Seed: From seed vendor for each grass-seed monostand or mixture stating the botanical and common name and percentage by weight of each species and variety, and percentage of purity, germination, and weed seed. Include the year of production and date of packaging.

1. Certification of each seed mixture for turfgrass sod identifying source, including name and telephone number of suppliers.

C. Certification that the Maryland Department of Agriculture has inspected and certified turfgrass fields where sod is to be harvested. A “Maryland Certified Sod Label” must be attached to each delivery ticket of bill of lading in order for the sod to be certified.

D. Product Certificates: For soil amendments and fertilizers, signed by product manufacturer.

E. Qualification Data: For landscape Installer.

F. Material Test Reports:

1. Existing surface soil
2. Imported topsoil.

G. Planting Schedule: Indicating anticipated planting dates for each type of planting.

H. Maintenance Instructions: Recommended procedures to be established by Owner for maintenance of lawns during a calendar year. Submit before expiration of required maintenance periods.

1.3 QUALITY ASSURANCE

A. Installer Qualifications: A qualified landscape installer whose work has resulted in successful lawn establishment.

1. Installer's Field Supervision: Require Installer to maintain an experienced full-time English-speaking supervisor on Project site when planting is in progress.

B. Soil-Testing Laboratory Qualifications: An independent laboratory, recognized by the State Department of Agriculture, with the experience and capability to conduct the testing indicated and that specializes in types of tests to be performed.

C. Topsoil Analysis: Furnish soil analysis by a qualified soil-testing laboratory stating percentages of organic matter; gradation of sand, silt, and clay content; cation exchange capacity; sodium absorption ratio; deleterious material; pH; and mineral and plant-nutrient content of topsoil.

1. Report suitability of topsoil for lawn growth. State recommended quantities of nitrogen, phosphorus, and potash nutrients and soil amendments to be added to produce a satisfactory topsoil.

D. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination."

1.4 DELIVERY, STORAGE, AND HANDLING

A. Seed: Deliver seed in original sealed, labeled, and undamaged containers.

B. Sod: Harvest, deliver, store, and handle sod according to requirements in TPI's "Specifications for Turfgrass Sod Materials" and "Specifications for Turfgrass Sod Transplanting and Installation" in its "Guideline Specifications to Turfgrass Sodding."

1.5 SCHEDULING

A. Planting Restrictions: Plant during one of the following periods. Coordinate planting periods with maintenance periods to provide required maintenance from date of Substantial Completion.

1. Spring Planting: March 1 to June 15
2. Fall Planting: October 1 to December 1

B. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit.

1.6 LAWN MAINTENANCE

A. Begin maintenance immediately after each area is planted and continue until acceptable lawn is established, but for not less than the following periods:

1. Seeded Lawns: **60** days from date of Substantial Completion.

a. When full maintenance period has not elapsed before end of planting season, or if lawn is not fully established, continue maintenance during next planting season.

2. Sodded Lawns: 30 days from date of Substantial Completion.

B. Maintain and establish lawn by watering, fertilizing, weeding, mowing, trimming, replanting, and other operations. Roll, regrade, and replant bare or eroded areas and re-mulch to produce a uniformly smooth lawn.

1. In areas where mulch has been disturbed by wind or maintenance operations, add new mulch. Anchor as required to prevent displacement.

C. Watering: Provide and maintain temporary piping, hoses, and lawn-watering equipment to convey water from sources and to keep lawn uniformly moist to a depth of 4 inches (100 mm).

1. Schedule watering to prevent wilting, puddling, erosion, and displacement of seed or mulch. Lay out temporary watering system to avoid walking over muddy or newly planted areas.
2. Water lawn at a minimum rate of 1 inch (25 mm) per week.

D. Mow lawn as soon as top growth is tall enough to cut. Repeat mowing to maintain specified height without cutting more than 40 percent of grass height. Remove no more than 40 percent of grass-leaf growth in initial or subsequent mowings. Do not delay mowing until grass blades bend over and become matted. Do not mow when grass is wet. Schedule initial and subsequent mowings to maintain the following grass height:

1. Mow grass 2 to 3 inches (50 to 75 mm) high.

E. Lawn Postfertilization: Apply fertilizer after initial mowing and when grass is dry.

1. Use fertilizer that will provide actual nitrogen of at least 1 lb/1000 sq. ft. (0.45 kg/92.9 sq. m) to lawn area.

PART 2 - PRODUCTS

2.1 SEED

A. Grass Seed: Fresh, clean, dry, new-crop seed complying with AOSA's "Journal of Seed Technology; Rules for Testing Seeds" for purity and germination tolerances.

B. Seed Species: State-certified seed of grass species. Confirm species with the State of Maryland Department of Agriculture Turf Grass Recommended Variety List (Maryland-Turf-Grass-Variety-List.pdf)Seed Species: Seed of grass species as follows, with not less than **95** percent germination, not less than 95> percent pure seed, with no weed seed.

2.2 TURFGRASS SOD

A. Turfgrass Sod: Certified, including limitations on thatch, weeds, diseases, nematodes, and insects, complying with TPI's "Specifications for Turfgrass Sod Materials" in its "Guideline Specifications to Turfgrass Sodding." Furnish viable sod of uniform density, color, and texture, strongly rooted, and capable of vigorous growth and development when planted.

B. Confirm that sod provider has been inspected and certified as Maryland Certified Turfgrass. A “Maryland Certified Sod Label.” Must be attached to each delivery ticket or bill of lading in order

for the sod to be accepted as certified (mda.maryland.gov/plants-pests/Documents/Maryland-Certified-Sod-Directory.pdf)

C. Turfgrass Species: Sod of grass species as follows, with not less than **95** percent germination, not less than **85** percent pure seed, and not more than **0.5** percent weed seed:

1. Sun and Partial Shade: Proportioned by weight as follows:

a. 10% percent Kentucky bluegrass (Poa pratensis).

After Midnight	Endurance	Pivot
Aries	Fullback	Selway
Blue Bank	Hampton	Shannon
Blue Coat	Legend	Skye
Blue Note	Midnight	SPF 30
Bolt	Noble	

b. 90% percent tall fescue (Festuca rubra), minimum of three (3) varieties listed below:

Annapolis	Firecracker G-LS	Paramount	Supersonic
Avenger III	Firecracker SLS	Raptor LS	Symphony
Black Tail	Grande 3	Raptor III	Technique
Bullseye	GTO	Reflection	Temple
Catalyst	Guardian 41	Regenerate	Thor
Crossfire 4	Hemi	Rockwell	Titanium 2LS
Degas	Lifeguard	Screamer LS	Trinity
Dragster	Maestro	Standout	Valkyrie LS
Dynamite G-LS	Michelangelo	Spyder 2 LS	Wichita
Fayette	Moondance GLX	SR 8650	4th Millennium
Firebird 2			

2.3 PLANTING ACCESSORIES

A. Selective Herbicides: EPA registered and approved, of type recommended by manufacturer for application.

1. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified soil-testing agency.

2.4 MULCHES

A. Straw Mulch: Provide air-dry, clean, mildew- and seed-free, salt hay or threshed straw of wheat, rye, oats, or barley.

B. Compost Mulch: Well-composted, stable, and weed-free organic matter, pH range of 5.5 to 8; moisture content 35 to 55 percent by weight; 100 percent passing through 1-inch (25-mm) sieve; soluble salt content of 5 to 10 decisiemens/m; not exceeding 0.5 percent inert contaminants and free of substances toxic to plantings; and as follows:

1. Organic Matter Content: **50 to 60** > percent of dry weight.
2. Feedstock: Agricultural, food, or industrial residuals; biosolids; yard trimmings; or source-separated or compostable mixed solid waste.

C. Fiber Mulch: Biodegradable, dyed-wood, cellulose-fiber mulch; nontoxic; free of plant-growth or germination inhibitors; with maximum moisture content of 15 percent and a pH range of 4.5 to 6.5.

D. Non-asphaltic Tackifier: Colloidal tackifier recommended by fiber-mulch manufacturer for slurry application; nontoxic and free of plant-growth or germination inhibitors.

2.5 EROSION-CONTROL MATERIALS

A. Erosion-Control Blankets: Biodegradable wood excelsior, straw, or coconut-fiber mat enclosed in a photodegradable plastic mesh. Include manufacturer's recommended steel wire staples, 6 inches (150 mm) long.

B. Erosion-Control Fiber Mesh: Biodegradable twisted jute or spun-coir mesh, a minimum of 0.92 lb/sq. yd. (0.5 kg/sq. m), with 50 to 65 percent open area. Include manufacturer's recommended steel wire staples, 6 inches (150 mm) long.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas to receive lawns and grass for compliance with requirements and other conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities, trees, shrubs, and plantings from damage caused by planting operations.

1. Protect adjacent and adjoining areas from hydroseeding overspray.

B. Provide erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

3.3 SOIL PREPARATION

A. Division 32 Section “Soil Preparation”.

3.4 SEEDING

A. Sow seed with spreader or seeding machine. Do not broadcast or drop seed when wind velocity exceeds 5 mph (8 km/h). Evenly distribute seed by sowing equal quantities in two directions at right angles to each other.

1. Do not use wet seed or seed that is moldy or otherwise damaged.

B. Sow seed at the rate of 5 to 8 lb/1000 sq. ft. (2.3 to 3.6 kg/92.9 sq.m).

C. Rake seed lightly into top 1/8 inch (3 mm) of topsoil, roll lightly, and water with fine spray.

D. Protect seeded areas with slopes exceeding 1:6 with erosion-control fiber mesh and 1:4 with erosion-control blankets installed and stapled according to manufacturer's written instructions.

E. Protect seeded areas with slopes not exceeding 1:6 by spreading straw mulch. Spread uniformly at a minimum rate of 2 tons/acre (42 kg/92.9 sq. m) to form a continuous blanket 1-1/2 inches (38 mm) in loose depth over seeded areas. Spread by hand, blower, or other suitable equipment.

1. Anchor straw mulch by crimping into topsoil with suitable mechanical equipment.
2. Bond straw mulch by spraying with asphalt emulsion at the rate of 10 to 13 gal./1000 sq. ft. (38 to 49 L/92.9 sq. m). Take precautions to prevent damage or staining of structures or other plantings adjacent to mulched areas. Immediately clean damaged or stained areas.

F. Protect seeded areas from hot, dry weather or drying winds by applying compost mulch within 24 hours after completing seeding operations. Soak and scatter uniformly to a depth of 3/16 inch (4.8 mm) and roll to a smooth surface.

3.5 HYDROSEEDING

A. Hydroseeding: Mix specified seed, fertilizer, and fiber mulch in water, using equipment specifically designed for hydroseed application. Continue mixing until uniformly blended into homogeneous slurry suitable for hydraulic application.

1. Mix slurry with non-asphaltic tackifier.
2. Apply slurry uniformly to all areas to be seeded in a one-step process. Apply mulch at a minimum rate of 1500-lb/acre (15.3-kg/92.9 sq. m) dry weight but not less than the rate required to obtain specified seed-sowing rate.
3. Apply slurry uniformly to all areas to be seeded in a two-step process. Apply first slurry application at a minimum rate of 500-lb/acre (5.1-kg/92.9 sq. m) dry weight but not less than the rate required to obtain specified seed-sowing rate. Apply slurry cover coat of fiber mulch at a rate of 1000 lb/acre (10.2 kg/92.9 sq. m).

3.6 SODDING

A. Lay sod within 24 hours of harvesting. Do not lay sod if dormant or if ground is frozen or muddy.

B. Remove netting prior to sod installation.

C. Lay sod to form a solid mass with tightly fitted joints. Butt ends and sides of sod; do not stretch or overlap. Stagger sod strips or pads to offset joints in adjacent courses. Avoid damage to subgrade or sod during installation. Tamp and roll lightly to ensure contact with subgrade, eliminate air pockets, and form a smooth surface. Work sifted soil or fine sand into minor cracks between pieces of sod; remove excess to avoid smothering sod and adjacent grass.

1. Lay sod across angle of slopes exceeding 1:3.
2. Anchor sod on slopes exceeding 1:6 with wood pegs or steel staples spaced as recommended by sod manufacturer but not less than 2 anchors per sod strip to prevent slippage.

D. Saturate sod with fine water spray within two hours of planting. During first week, water daily or more frequently as necessary to maintain moist soil to a minimum depth of 1-1/2 inches (38 mm) below sod.

3.7 LAWN RENOVATION

A. Renovate existing lawn.

B. Renovate existing lawn damaged by Contractor's operations, such as storage of materials or equipment and movement of vehicles.

1. Reestablish lawn where settlement or washouts occur or where minor regrading is required.

C. Remove sod and vegetation from diseased or unsatisfactory lawn areas; do not bury in soil.

D. Remove topsoil containing foreign materials resulting from Contractor's operations, including oil drippings, fuel spills, stone, gravel, and other construction materials, and replace with new topsoil.

E. Mow, dethatch, core aerate, and rake existing lawn.

F. Remove weeds before seeding. Where weeds are extensive, apply selective herbicides as required. Do not use pre-emergence herbicides.

G. Remove waste and foreign materials, including weeds, soil cores, grass, vegetation, and turf, and legally dispose of them off Owner's property.

H. Till stripped, bare, and compacted areas thoroughly to a soil depth of 6 inches (150 mm).

I. Apply soil amendments and initial fertilizers required for establishing new lawns and mix thoroughly into top 4 inches (100 mm) of existing soil. Provide new planting soil to fill low spots and meet finish grades.

J. Apply seed and protect with straw mulch as required for new lawns.

K. Water newly planted areas and keep moist until new lawn is established.

3.8 SATISFACTORY LAWNS

A. Satisfactory Seeded Lawn: At end of maintenance period, a healthy, uniform, close stand of grass has been established, free of weeds and surface irregularities, with coverage exceeding 90 percent over any 10 sq. ft. (0.92 sq. m) and bare spots not exceeding 3 by 3 inches (76 by 76 mm).

B. Reestablish lawns that do not comply with requirements and continue maintenance until lawns are satisfactory.

3.9 CLEANUP AND PROTECTION

A. Promptly remove soil and debris created by lawn work from paved areas. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.

B. Erect barricades and warning signs as required to protect newly planted areas from traffic. Maintain barricades throughout maintenance period and remove after lawn is established.

C. Remove erosion-control measures after grass establishment period.

END OF SECTION

SECTION 32 93 00 - EXTERIOR PLANTS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Trees.
2. Shrubs.
3. Grasses
4. Perennials.
5. Planting Accessories.
6. Edgings.
7. Mulch.
8. Maintenance and Warranty of Exterior Plants.

B. Related Sections include the following:

1. Division 31 Section "Site Clearing" for topsoil stripping and stockpiling, and site clearing.
2. Division 01 Section “Tree Protection and Trimming”.
3. Division 31 Section "Earth Moving" for excavation, filling, and rough grading and for subsurface aggregate drainage and drainage backfill materials.
4. Division 32 Section “Planting Soil Preparation”
5. Division 32 Section “Lawns and Turfgrasses” for turfgrass plantings.

1.2 DEFINITIONS

A. Balled and Burlapped Stock: Exterior plants dug with firm, natural balls of earth in which they are grown, with ball size not less than [diameter and depth recommended by ANSI Z60.1 for type and size of tree or shrub required; wrapped, tied, rigidly supported, and drum-laced as recommended by ANSI Z60.1.

B. Container-Grown Stock: Healthy, vigorous, well-rooted exterior plants grown in a container with well-established root system reaching sides of container and maintaining a firm ball when removed from container. Container shall be rigid enough to hold ball shape and protect root mass during shipping and be sized according to ANSI Z60.1 for kind, type, and size of exterior plant required.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Samples for Verification: For each of the following:

1. Edging materials and accessories, of manufacturer's standard size, to verify color selected.

C. Product Certificates: For each type of manufactured product, signed by product manufacturer, and complying with the following:

1. Manufacturer's certified analysis for standard products.
2. Analysis of other materials by a recognized laboratory made according to methods established by the Association of Official Analytical Chemists, where applicable.

D. Qualification Data: For landscape Installer.

E. Planting Schedule: Indicating anticipated planting dates for exterior plants.

F. Photographs: Submit photographs of plants, as requested by the Landscape Architect, prior to Observation, as listed under Quality Assurance, below. Photographs shall include a person holding a clearly-marked measuring rod next to plants. Photographs shall exhibit the size, growth habit, and general visual quality of plants. Photographs of dense clusters of plants, in which one plant is not distinguishable from another, are not acceptable. Digital photographs submitted via email are acceptable.

G. Maintenance Instructions: Recommended procedures to be established by Owner for maintenance of exterior plants, including material in the Bioretention areas, during a calendar year. Submit before expiration of required maintenance periods.

1.4 QUALITY ASSURANCE

A. Nursery Certifications:

1. Indicate on nursery letterhead the name of plants in accordance with the ITIS (Integrated Taxonomic Information System): https://www.itis.gov or Catalogue of Life: http://www.catalogueoflife.org including botanical common names, quantity, and size.
2. Plants shall be selected for licensed nurseries.

B. Installer Qualifications: A qualified landscape installer, licensed to work in the State of Maryland, whose work has resulted in successful establishment of exterior plants in landscapes of similar scope to that required for the work, including the handling and planting of large trees.

1. Submit copy of license and three references for similar work completed in the last five years.
2. Installer's Field Supervision: Require Installer to maintain an experienced full-time, English-speaking, supervisor on Project site at all times when exterior planting and regular maintenance is in progress. Supervisor should have a minimum of five years' experience as a field supervisor installing plants and trees of the quality and scale of the project.

C. Provide quality, size, genus, species, and variety of exterior plants indicated, complying with applicable requirements in ANSI Z60.1, "American Standard for Nursery Stock." Provide Plant Lists stating total number of each plant three months before expected planting date for compliance wit planting plan and list.

1. Substitutions of plants will not be permitted unless authorized in writing by the Landscape Architect, prior to purchase for this Project. Contractor shall make every reasonable effort to find the material specified and is responsible for documenting any plant suitability or availability problems with the above Plant List. If after extensive searching, plant is not

available and cannot be contract grown, contractor shall detail the search that has been made and offer Plant Substitutions.

D. Tree and Shrub Measurements: Measure according to ANSI Z60.1 with branches and trunks or canes in their normal position. Do not prune to obtain required sizes. Take caliper measurements 6 inches (150 mm) above ground for trees up to 4-inch (100-mm) caliper size, and 12 inches (300 mm) above ground for larger sizes. Measure main body of tree or shrub for height and spread; do not measure branches or roots tip-to-tip.

E. Approvals and Observation:

1. Contractor shall submit a list of plant sources for all plant materials for Landscape Architect's approval. Contractor shall also work with the representative from the Department of General Services and Landscape Architect to schedule trips to the sources designated by the Contracting Officer to inspect and approve the plant materials at the nurseries, and tag approved materials, prior to ordering and delivery to the project site.
2. A representative from the Department of General Services and the Landscape Architect will observe trees and shrubs either at place of growth or at site before planting for compliance with requirements for genus, species, variety, size, and quality. Department of General Services representative and Landscape Architect retain the right to observe trees and shrubs further for size and condition of balls and root systems, insects, injuries, and latent defects and to reject unsatisfactory or defective material at any time during progress of work. Remove rejected trees or shrubs immediately from Project site.

    a. Notify the Department of General Services representative and the Landscape Architect of sources of planting materials seven days in advance of delivery to site.

3. For plants the representative from the Department of General Services and Landscape Architect chooses not to inspect at the source, Contractor shall submit nursery photographs, Landscape Architect approval prior to ordering. Photographs shall include the tree root flare and trunk, taken from a minimum of two sides of trees, photographs for shrubs shall show the side and the top. It is acceptable to show multiple plants in a photograph if all sides are visible. An object, preferably a nursery measuring pole, yardstick, or person will be in each photograph to use as a size reference.
4. All selected plants shall be inspected upon delivery to the project site by the representative from the Department of General Services and Landscape Architect. Plants will be inspected once they are unloaded from the delivery vehicle. Contractor shall notify the representative from the Department of General Services and Landscape Architect two (2) weeks in advance of all plant deliveries to coordinate inspection upon delivery.

F. Plant Substitutions for Plants Not Available

1. Submit all requests for plant substitutions or size changes to the Landscape Architect for approval prior to purchasing the proposed substitution and at least 30 days prior to installation dates. Contractor shall provide list of sources for all plant material and procurement status 60 days in advance of tentative planting schedule. Landscape Architecture shall sign off on plant substitutions prior to contractor planning, designing, purchasing, and planting any substitutions.

    a. Request for substitutions shall be accompanied with a list of nurseries contacted in the search for the required plant and a record of other attempts to locate the desired plants.

b. Substitutions will only be allowed when the contractor has demonstrated that all efforts to procure the specified plant, cultivar or size have been exhausted. Landscape Architect will determine the plant substitutions.

G. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination."

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver with branches tied and exposed branches covered with material which allows air circulation. Prevent damage to branches, trunks, root systems, and root balls and desiccation of leaves. Plants shall arrive in acceptable condition.

B. Deliver plants with durable waterproof labels in weather-resistant ink. Provide labels stating the correct botanical and common plant name and variety as applicable and size as specified in the list of required plants. Attach to plants, bundles, and containers of plants. Groups of plants may be labeled by tagging one plant. Labels shall be legible for a minimum of 60 days after delivery to the planting site.

C. Store, irrigate, maintain, and otherwise protect balled and burlapped trees in a manner that prevents mechanical injury and physiological stress between the time of digging and delivery.

D. Deliver exterior plants freshly dug.

1. Immediately after digging up bare-root stock, pack root system in wet straw, hay, or other suitable material to keep root system moist until planting.

E. Do not prune trees and shrubs before delivery, except as approved by Landscape Architect. Protect bark, branches, and root systems from sun scald, drying, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees or shrubs in such a manner as to destroy their natural shape. Irrigate balled and burlapped plants thoroughly immediately prior to transport. Provide protective covering of exterior plants during delivery. Do not drop exterior plants during delivery.

F. Handle planting stock by root ball. Planting stock with cracked or broken root balls will not be accepted.

G. Deliver exterior plants after preparations for planting have been completed and install immediately. If planting is delayed more than six hours after delivery, set exterior plants trees in shade, protect from weather and mechanical damage, and keep roots moist.

1. Set balled stock on ground and cover ball with woodchip mulch or other acceptable material.
2. Do not remove container-grown stock from containers before time of planting.
3. Water root systems of exterior plants stored on-site with a fine-mist spray. Water as often as necessary to maintain root systems in a moist condition.

1.6 COORDINATION

A. Contractor is responsible for determining plant quantities per planting plan. Contractor is responsible for filling all areas on plans shown to be planted on planting plan. Contractor shall

prepare his or her own quantity list from the plans. All grasses and perennials, for stormwater planting are to be filled at the specified spacing.

B. Planting Restrictions: Plant during one of the following periods. Coordinate planting periods with maintenance periods to provide required maintenance from date of Substantial Completion.

1. Spring Planting: March 15 to June 15

a. Deciduous material
b. Herbaceous material

2. Fall Planting: September 15 to October 31

a. Evergreen material
b. Deciduous material
c. Herbaceous material

3. No Planting shall occur between June 15 and September 14, inclusive, except as authorized by the Landscape Architect.

C. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit.

D. Coordination with Other Work: Coordinate planting with all other work of the project, including the following:

1. Landscape Irrigation: Coordinate planting with location of irrigation equipment. Coordinate aiming of landscape irrigation equipment to ensure that plantings do not impair the irrigation system from functioning as designed. Ensure that plant locations do not block irrigation spray and do not interfere with other irrigation equipment, including moisture sensors and rain sensors.
2. Site Lighting and Electrical Equipment: Coordinate planting with site lighting to ensure that plantings do not impair site lighting from illuminating the site as designed. Following planting installation, coordinate aiming of site lighting that is intended to illuminate plants.

E. Coordination with Lawns: Plant trees and shrubs after finish grades are established and before planting lawns, unless otherwise acceptable to Landscape Architect.

1. When planting trees and shrubs after lawns, protect lawn areas and promptly repair damage caused by planting operations.

1.7 WARRANTY

A. Special Warranty: Warrant all exterior plants covered by this Section, for the warranty period indicated, against defects including death and unsatisfactory growth, except for defects resulting from lack of adequate maintenance, neglect, or abuse by Owner, or incidents that are beyond Contractor's control.

1. Warranty Period for Exterior Plants:

a. From date of Installation to Substantial Completion.
b. Two years from date of Substantial Completion.

2. Remove dead exterior plants immediately. Replace immediately unless outside of approved planting seasons, in which case Landscape Architect will determine whether material is required to be planted immediately or in the succeeding planting season.
3. Replace without cost to Owner, as soon as weather and soil conditions permit, exterior plants that are more than 25 percent dead or in an unhealthy condition as determined solely by the Landscape Architect at end of the two-year warranty period.

1.8 MAINTENANCE

A. Maintenance Period for all exterior plants covered by this Section: Concurrent with Warranty Period and same duration as Warranty Period. Maintenance requirements are itemized in Part 3 of this Section.

B. Owner will assume maintenance following completion of Maintenance Period.

PART 2 - PRODUCTS

2.1 TREE AND SHRUB MATERIAL

A. General: Furnish nursery-grown trees and shrubs in accordance with good horticultural practices under climatic conditions similar to those of the Project for at least two years, unless specifically noted otherwise. Trees and shrubs shall comply with ANSI Z60.1, with healthy root systems developed by transplanting or root pruning. Trees and shrubs shall exceed AAN standards for quality by being exceptionally heavy, uniform, so trained or favored in development and appearance as to be superior in form, density and spread of branches, compactness, and symmetry. Determination of quality shall be made by the Landscape Architect. Provide well-shaped, fully branched, healthy, vigorous stock free of disease, insects, eggs, larvae, and defects such as knots, sun scald, leaf spotting, injuries, abrasions, and disfigurement.

B. Root Ball Size: Rootballs shall conform to ANSI/ANLA Z60.1. All wrappings and ties shall be biodegradable. Root bound plants will not be accepted.

C. Trees shall be planted such that the root flare is 1" above adjacent grade, unless the drawings indicate otherwise. Tree planting height shall be dictated by the actual root flare rather than the top of rootball as received from growers or nurseries.

1. Tops of tree rootballs shall be no higher than 2" above the tops of main order tree roots.
2. If main order roots are buried greater than 2" but less than 4" below the top of tree rootballs, contractor must trim rootballs by carefully removing soil from the top of the rootballs so that main order roots are within 2" of the top of rootball.
3. If main order roots are buried greater than 4" below the top of rootball, the tree will be rejected, and the contractor must remove the tree from the jobsite.
4. The contractor is responsible for ensuring that trees received on site and planted on site meet the aforementioned specifications regarding tree root flare and rootball. The contractor is responsible for ensuring that the landscape architect has an opportunity to review the tree root flares of trees in the growers' field or nursery yard. If tree root flares are obscured (due to trunk wrap or burlap or other obstructions), landscape architect's acceptance of trees in the grower's yard or nursery shall constitute acceptance of trees WITH THE EXCEPTION of trees whose root flare is buried greater than 4" below top of rootball. In the event that contractor does not allow Landscape Architect to visually

observe tree root flares during tree selection at grower's yard or nursery, Landscape Architect reserves the right to reject any tree delivered to the site if tree's root flare is buried greater than 4" below top of rootball, even if Landscape Architect previously accepted said trees at the grower's yard or nursery.

D. Primary structural roots shall be visibly numerous, well-distributed, and radiating straight away from the trunk.

E. Grade: Provide trees and shrubs of sizes and grades complying with ANSI Z60.1 for type of trees and shrubs required. Trees and shrubs of a larger size may be used if acceptable to Landscape Architect, with a proportionate increase in size of roots or balls.

F. Label each tree and shrub with securely attached waterproof tag bearing legible designation of botanical and common name.

G. If formal arrangements or consecutive order of trees or shrubs is shown, select stock for uniform height, branching height, and spread, and number label to assure symmetry in planting.

2.2 SHADE AND FLOWERING TREES

A. Deciduous Trees: A height to caliper relationship shall be provided in accordance with ANSI/ANLA Z60.1. Height of branching shall bear a relationship to the size and species of tree specified and with the crown in good balance with the trunk.

1. Single stem: The trunk shall be reasonably straight and symmetrical with crown and have a persistent main leader.
2. Multi-stem and Clump: All countable stems, in aggregate, shall average the size specified. To be considered a stem, there shall be no division of the trunk which branches more than 6 inches from ground level. Multi-stem and clump trees shall meet height as specified, measured with a pole from the base of the plant to the top of the height growth.

B. Shade Trees: Single-stem trees with straight trunk, well-balanced crown, and intact leader, of height and caliper indicated, complying with ANSI Z60.1 for type of trees required. Trees should be symmetrically developed and of uniform habit of growth, with straight boles or stems and free from objectionable disfigurements.

1. Provide balled and burlapped trees.
2. Branching Height: One-third to one-half of tree height. For street trees branching height shall be one half of tree height.

C. Small Upright or Spreading Trees: Branched or pruned naturally according to species and type, with relationship of caliper, height, and branching according to ANSI Z60.1; stem form as follows:

1. Stem Form: As indicated.
2. Provide balled and burlapped trees.

D. Multi-stem Trees: Branched or pruned naturally according to species and type, with relationship of caliper, height, and branching according to ANSI Z60.1; stem form as follows:

1. Stem Form: Clump.
2. Provide balled and burlapped trees.

2.3 DECIDUOUS SHRUBS

A. Form and Size: Deciduous shrubs with not less than the minimum number of canes required by and measured according to ANSI Z60.1 for type, shape, and height of shrub. Acceptable plant material shall be well shaped, with sufficient well-spaced side branches, and recognized by the trade as typical for the species grown in the region of the project.

1. Provide container-grown or fabric bag-grown shrubs.

2.4 GROUND COVER PLANTS

A. Ground Cover: Provide ground cover of species indicated, established and well rooted in pots or similar containers, and complying with ANSI Z60.1 and the following requirements:

2.5 PLANTS

A. Perennials: Provide vigorous, healthy, field-grown plants from a certified, commercial nursery, of species and variety shown or listed. Plants should be free from insects and disease; not overgrown (leggy). Plants that have been recently potted up to the next size container will be counted as the previous container size.

2.6 PLANTING SOIL

A. Division 2 Section “Soil Preparation”.

2.7 MULCHES

A. Organic Mulch: Free from deleterious materials and suitable as a top dressing of trees and shrubs, consisting of one of the following:

1. Type: Shredded hardwood, Ground or shredded bark, or Wood and bark chips.
2. The use of mulch shall be limited to a maximum total depth no greater than 2 inches and applied only where existing mulch has either been cultivated into the soil or removed. Organic mulch shall be double shredded hardwood mulch, Virginia Pine Fines, or Leaf Compost. Avoid using fresh wood chips, hardwood bark, saw dust or shavings, and pine bark containing a high percentage of white sap wood because these materials will compete with plants for nitrogen. Repeated use of hardwood mulches infuses the soil with toxic levels of manganese. No colored or dyed mulches shall be used.
3. Special care shall be taken in the mulching operation not to over mulch or cover the base trunk of trees, shrubs, and crowns of perennials with mulch.

2.8 STAKES AND GUYS

A. Install Stakes and Guys per methods and locations as shown on the Drawings.

B. Upright and Guy Stakes: Rough-sawn, sound, new hardwood, redwood, or pressure-preservative-treated softwood, free of knots, holes, cross grain, and other defects, 2 by 2 inches (50 by 50 mm) by length indicated, pointed at one end.

C. Guy Ties and Guards:

1. Guy and Tie Wire: ASTM A 641/A 641M, Class 1, galvanized-steel wire, 2-strand, twisted, 0.106 inch (2.7 mm) in diameter.
2. Guy Cable: For large trees: 5-strand, 3/16-inch- (4.8-mm-) diameter, galvanized-steel cable, with zinc-coated turnbuckles, a minimum of 3 inches (75 mm) long, with two 3/8-inch (10-mm) galvanized eyebolts.
3. Hose Chafing Guard: Reinforced rubber or plastic hose at least 1/2 inch (13 mm) in diameter, black, cut to lengths required to protect tree trunks from damage.
4. Woven Fabric Guy Ties: Flat, woven, non-fraying, polypropylene material, ¾" wide, white. Arbor Tie or approved equivalent.

D. Guy and Anchoring System: ArborGuy 40E (www.stakingsystems.com), or approved equivalent. ArborGuy guylines, arrowhead anchors, tool-free tensioners.

E. Flags: Standard surveyor's plastic flagging tape, white, 6 inches (150 mm) long.

2.9 LANDSCAPE EDGINGS

A. Steel Edging: Standard commercial-steel edging, rolled edge, fabricated in sections of standard lengths, with loops stamped from or welded to face of sections to receive stakes.

1. Edging Size: 1/8 inch (3.2 mm) wide by 6 inches (150 mm) deep.
2. Stakes: Tapered steel, a minimum of 12 inches (300 mm) long.
3. Accessories: Standard tapered ends, corners, and splicers.
4. Finish: Standard paint.
5. Paint Color: Black.

2.10 MISCELLANEOUS PRODUCTS

A. Antidesiccant: Water-insoluble emulsion, permeable moisture retarder, film forming, for trees and shrubs, designed to permit transpiration but retard excessive loss of moisture from plants. Deliver in original, sealed, and fully labeled containers and mix according to manufacturer's written instructions.

1. Dowax by Dow Chemical Co., or Wilt-Proof by Nursery Specialty Products, Inc.

B. Tree Watering Bags: UV-treated polyethylene irrigation bag reinforced with nylon webbing. All sides to be watertight with ¼" thick heat seals. Bags shall have nylon zippers to allow to be secured to tree or secured to other bags for multiple-bag configuration.

1. Manufacturer: TreeGator, 1-866-873-3428, or approved equivalent.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas to receive exterior plants for compliance with requirements and conditions affecting installation and performance. Notify Landscape Architect, in writing, of any conditions

that might prevent satisfactory completion. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Test drainage of pits and planting beds. Notify Landscape Architect of potential poor drainage of tree and shrub pits and planting beds. Recommend a program for correction of poor drainage conditions and submit proposal to Landscape Architect. Do not proceed with planting operations in areas of poor drainage until conditions are corrected, or direction is given by the Landscape Architect.

3.2 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities, and lawns and existing exterior plants from damage caused by planting operations.

B. Provide erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

C. Lay out individual tree and shrub locations and areas for multiple exterior plantings. Stake locations, outline areas, adjust locations when requested, and obtain Landscape Architect's acceptance of layout before planting. Make minor adjustments as required.

D. Lay out exterior plants at locations directed by Landscape Architect. Stake locations of individual trees and shrubs and outline areas for multiple plantings.

E. Apply antidesiccant to trees and shrubs using power spray to provide an adequate film over trunks, branches, stems, twigs, and foliage to protect during digging, handling, and transportation.

1. If deciduous trees or shrubs are moved in full leaf, spray with antidesiccant at nursery before moving and again two weeks after planting.

3.3 PLANTING BED ESTABLISHMENT

A. Division 32 Section “Soil Preparation”.

3.4 TREE AND SHRUB EXCAVATION

A. Division 32 Section “Soil Preparation”.

3.5 TREE AND SHRUB PLANTING

A. Set balled and burlapped stock plumb and in center of pit or trench with root flare 1 inch (25 mm) above adjacent finish grades.

1. Cut burlap and wire baskets from top half of root balls, but do not remove from under root balls. Discard removed burlap and wire baskets; do not turn down baskets and leave in tree or shrub pits. Remove pallets, if any, before setting. Do not use planting stock if root ball is cracked or broken before or during planting operation.
2. Place planting soil mix around root ball in layers, tamping to settle mix and eliminate voids and air pockets. When pit is approximately one-half backfilled, install transplant

inoculants per manufacturer's directions and water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed. Water again after placing and tamping final layer of planting soil mix.

3. Prepare surface of planting bed as shown on drawings.

B. Set container-grown stock plumb and in center of pit or trench with root flare 1 inch (25 mm) above adjacent finish grades.

1. Carefully remove root ball from container without damaging root ball or plant.
2. Make four (4) evenly spaced vertical cuts in the sides of the root ball with a clean, sharp utility knife. Cuts are to be one inch (1") deep and are to extend the full height of the rootball.
3. Place planting soil mix around root ball in layers, tamping to settle mix and eliminate voids and air pockets. When pit is approximately one-half backfilled, install transplant inoculants per manufacturer's directions and water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed. Water again after placing and tamping final layer of planting soil mix.
4. Prepare surface of planting bed as shown on drawings.

C. Organic Mulching: Apply 2-inch (50-mm) average thickness of organic mulch extending 12 inches (300 mm) beyond edge of planting pit or trench. Do not place mulch within 3 inches (75 mm) of trunks or stems.

D. Wrap trees of 2-inch (50-mm) caliper and larger with trunk-wrap tape if requested by Landscape Architect. Start at base of trunk and spiral cover trunk to height of first branches. Overlap wrap, exposing half the width, and securely attach without causing girdling. Inspect tree trunks for injury, improper pruning, and insect infestation; take corrective measures required before wrapping.

3.6 TREE AND SHRUB PRUNING

A. Prune, thin, and shape trees and shrubs as directed by Landscape Architect.

B. Prune, thin, and shape trees and shrubs according to standard horticultural practice. Prune trees to retain required height and spread. Unless otherwise indicated by Landscape Architect, do not cut tree leaders; remove only injured or dead branches from flowering trees. Prune shrubs to retain natural character. Shrub sizes indicated are sizes after pruning.

3.7 GUYING AND STAKING

A. Guy and Stake trees as indicated on the drawings. Installation of tree support systems shall be completed within 48 hours of planting, utilizing applicable methods as indicated.

3.8 PERENNIAL PLANTING

A. Set out and space perennials as indicated.

B. Dig holes large enough to allow spreading of roots and backfill with planting soil.

C. Work soil around roots to eliminate air pockets and leave a slight saucer indentation around plants to hold water.

D. Water thoroughly after planting, taking care not to cover plant crowns with wet soil.

E. Protect plants from hot sun and wind; remove protection if plants show evidence of recovery from transplanting shock.

3.9 PLANTING BED MULCHING

A. Mulch backfilled surfaces of planting beds and other areas indicated.

1. Organic Mulch: Apply 2-inch (50-mm) average thickness of organic mulch, and finish level with adjacent finish grades. Do not place mulch against plant stems.

3.10 EDGING INSTALLATION

A. Steel Edging: Install steel edging where indicated according to manufacturer's written instructions. Anchor with steel stakes spaced approximately 30 inches (760 mm) apart, driven below top elevation of edging.

3.11 TREE WATERING BAGS

A. Install a minimum of one tree watering bag per tree. Install multiple bags for trees as recommended by the tree watering bag manufacturer. Fill water bags for each tree.

3.12 INITIAL ACCEPTANCE

A. When all work except maintenance and guarantee program of this contract has been completed, Landscape Architect will perform a Substantial Completion inspection. Provide notification at least ten (10) working days before inspection date.

1. If required a “punch list” of items to be completed by an agreed upon date will be issued by the Landscape Architect after the Substantial Completion inspection.

B. Work will be considered Substantially Complete after all “punch list” items are complete. Notify the Landscape Architect at least five (5) working days before re-inspection date, to verify completion of the “punch list” items.

C. Substantial Completion certificate will be issued and dated by the Landscape Architect following the “punch list” verification inspection.

3.13 MAINTENANCE

A. Maintain all exterior plants covered by this Section, as required to establish healthy, viable plantings, including the following maintenance requirements during the maintenance period indicated in Part 1 of this Section:

1. Mowing;
2. Edging;
3. Pruning;
4. Cultivating;

5. Watering,

    a. Keep tree water bags filled at all times
    b. Do not allow plants to wilt at any time
    c. Contractor is responsible for all irrigation until final acceptance at the end of the maintenance period.

6. Weeding;
7. Fertilizing;
8. Mulching;
9. Restoring plant saucers for trees;
10. Maintaining trees support systems at correct tension;
11. Resetting plants to proper grade and vertical position;
12. Insect and Pest Control as required to keep plants free of insects and disease;
13. Restoring or replacing damaged tree wrappings;
14. Removal of trash and debris; and
15. Replacing dead or dying plants.

3.14 FINAL ACCEPTANCE

A. Inspection to determine Final Acceptance of planted areas will be made by the Landscape Architect upon Contractor's request at completion of the two-year Warranty Period. Provide notification at least fifteen (15) working days before requested inspection date.

1. Planted areas will be acceptable provided all requirements, including plant replacements and maintenance, have been complied with and healthy, thriving, and growing plants are established.
2. Remove all Tree Staking and Guying materials prior to Final Acceptance inspection.
3. Knock down, regrade, and re-mulch all tree pit saucers prior to Final Acceptance inspection.

3.15 CLEANUP AND PROTECTION

A. During exterior planting, keep adjacent pavings and construction clean and work area in an orderly condition.

B. Protect exterior plants from damage due to landscape operations, operations by other contractors and trades, and others. Maintain protection during installation and maintenance periods. Treat, repair, or replace damaged exterior planting.

3.16 DISPOSAL

A. Disposal: Remove surplus soil and waste material, including excess subsoil, unsuitable soil, trash, and debris, and legally dispose of off Owner's property.

END OF SECTION

This page is intentionally left blank.

SECTION 32 96 00 - TRANSPLANTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes transplanting non-nursery-grown trees by tree spade or digging and boxing.

B. Related Requirements:

1. Section 015639 "Temporary Tree and Plant Protection" for protecting, trimming, pruning, repairing, and replacing existing trees to remain that interfere with, or are affected by, execution of the Work.
2. Section 329300 "Exterior Plants" for new trees from nursery-grown sources.

1.3 DEFINITIONS

A. General: See definitions in ANSI A300 (Part 6) and in ANSI Z60.1 pertaining to field-grown trees, except as otherwise defined in this Section.

B. Caliper: Diameter of a trunk as measured by a diameter tape or the average of the smallest and largest diameters at a height 6 inches above the root flair for trees up to, and including, 4-inch size at this height; and as measured at a height of 12 inches above the root flair for trees larger than 4-inch size.

C. Root-Ball Depth: Measured from bottom of trunk flare to the bottom of root ball.

D. Root-Ball Width: Measured horizontally across the root ball with an approximately circular form or the least dimension for non-round root balls, not necessarily centered on the tree trunk, but within tolerance according to ANSI Z60.1.

E. Root Flare: Also called "trunk flare." The area at the base of the tree's stem or trunk where the stem or trunk broadens to form roots; the area of transition between the root system and the stem or trunk.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to transplanting work include, but are not limited to, the following:

a. Construction schedule. Verify availability of materials, personnel, equipment, and unimpeded access needed to make progress and avoid delays.

b. Tree and plant protection.
c. Tree maintenance.
d. Arborist's responsibilities.
e. Restrictions: weather, equipment, personnel, availability of replanting site. Arborist must be on site during the procedure.
f. Conditions for holding the tree if there will be a delay in planting.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples for Verification: For each of the following:

1. Weed-control barriers.
2. Proprietary Root-Ball-Stabilization Device: One unit.
3. Slow-Release Watering Device: One unit of each size required.

C. Pruning Schedule: Written schedule prepared by arborist detailing scope and extent of pruning each tree in preparation for and subsequent to transplanting.

1. Species and size of plant.
2. Location on site plan. Include unique identifier for each.
3. Reason for pruning.
4. Seasonal limitations on pruning.
5. Preparatory Pruning: Time schedule and description of preparatory pruning to be performed.

a. Indicate time in months preceding the extraction of the tree.
b. Indicate diameter of root ball and depth of root pruning for each tree.

6. Description of root and crown pruning during and subsequent to transplanting.
7. Description of maintenance following pruning.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified tree-service firm and arborist.

B. Certification: From arborist, certifying that transplanted trees have been protected during construction and that trees were promptly and properly treated and repaired when damaged.

C. Maintenance Recommendations: From arborist, recommended procedures to be established by Government for care and protection of trees after completing the Work.

1. Submit before completing the Work.

D. Existing Conditions: Documentation of existing trees indicated to be transplanted, which establishes preconstruction conditions that might be misconstrued as damage caused by construction activities.

1. Use sufficiently detailed color photographs or video recordings. Color shall accurately depict hue condition of foliage and bark.
2. Include drawings and notations to indicate specific wounds and damage conditions of each tree designated to be transplanted.

E. Tree-Transplanting Program: Submit before work begins.

F. Sample Warranties: For special warranties.

G. Tree-maintenance reports.

1.7 QUALITY ASSURANCE

A. Tree-Service Firm Qualifications: An experienced landscaping contractor or tree-moving firm that has successfully completed the transplanting of similar sized oak trees as similar to that required for this Project and that will assign an experienced, qualified arborist to Project site during execution of the Work.

1. Arborist Qualifications: Certified Arborist as certified by ISA.

B. Tree-Transplanting Program: Prepare a written plan by arborist for transplanting trees for the whole Project, including each phase or process, tree maintenance, and protection of surrounding materials during operations. Describe in detail the materials, methods, and equipment to be used for each phase of the transplanting work.

1. Include transplanting times appropriate for each species at the Project location unless otherwise indicated on Drawings or directed by arborist.
2. Include a transplanting schedule for each species to be transplanted, coordinated with the Project schedule.
3. Include site plans clearly marked to show tree-moving routes from extraction to planting locations. Indicate proposed equipment, weight, and turning radii.
4. Show details of temporary protective barriers where needed.
5. Include diagrams showing clearances to utility lines and other encumbrances along route.
6. Include care and maintenance provisions and eventual removal of tree stabilization.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of conformance with state and federal laws if applicable.

B. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or trees.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Accompany each delivery with appropriate certificates.

C. Protect bark, branches, and root systems from sun scald, drying, wind burn, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees in such a manner as to destroy their natural shape.

D. Completely cover foliage when transporting trees while they are in foliage.

E. Handle trees by root ball. Do not drop trees.

F. Move trees after preparations for planting have been completed and install immediately. If planting is delayed more than six hours after moving, set trees in their appropriate aspect (sun, filtered sun, or shade), protect from weather and mechanical damage, and keep roots moist.

1.9 FIELD CONDITIONS

A. Field Measurements: Verify final grade elevations and final locations of trees and construction contiguous with trees by field measurements before proceeding with transplanting work. Perform transplanting only after finish grades are established.

B. Seasonal Restrictions: Transplant trees during the following in-season periods:

1. Early Spring: February -March, before Spring budding.

C. Weather Limitations: Proceed with transplanting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Do not transplant during excessively wet or frozen conditions. Apply products during favorable weather conditions according to manufacturer's written instructions and warranty requirements.

D. Coordination with Turf Areas (Lawns): Perform transplanting before planting turf areas unless otherwise indicated.

1. When transplanting after planting turf areas, protect turf areas, and promptly repair damage caused by transplanting operations.

E. Coordination with Planting Beds: Perform transplanting before planting bedded areas unless otherwise indicated.

1. When transplanting after planting bedded areas, protect bedding plants, and promptly repair damage caused by transplanting operations.

1.10 WARRANTY

A. Installer's Special Warranty: Tree-service firm agrees to repair or replace trees and related materials that fail within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Death and unsatisfactory growth except for defects resulting from abuse, lack of adequate maintenance, or neglect by Government, or incidents that are beyond Contractor's control.
b. Death and unsatisfactory growth is defined as more than 15 percent dead or in an unhealthy condition or failure to meet general performance requirements at end of warranty period.
c. Structural failures including trees falling or blowing over.
d. Faulty performance of materials and devices related to tree plantings including tree stabilization and watering devices.

2. Warranty Periods from Date of Transplanting Completion:

a. Trees: 24 months.

3. Include the following remedial actions as a minimum:

    a. Remove dead trees and trees with unsatisfactory growth at end of warranty period; replace when directed.
    b. A limit of one replacement of the same species, variety and caliper for each tree will be required except for losses or replacements due to failure to comply with requirements.
    c. Replace materials and devices related to tree plantings.
    d. Provide extended warranty for period equal to original warranty period, for replaced trees.

1.11 MAINTENANCE SERVICE

A. Initial Maintenance Service: Provide tree maintenance by skilled employees of tree-service firm and as required in Part 3. Begin maintenance immediately after preparatory pruning and continue until plantings are healthy and well established but for not less than maintenance period below.

    1. Maintenance Period: 24 months from date of Substantial Completion.

B. Continuing Maintenance Proposal: From tree-service firm to the Owner, in the form of a standard yearly (or other period) maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General Performance: Transplanted trees shall be healthy and resume vigorous growth within two years of transplanting without dieback due to defective extracting, handling, planting, maintenance, or other defects in the Work.

2.2 PLANTING MATERIALS

A. Backfill Soil: Excavated soil mixed with planting soil of suitable moisture content and granular texture for placing and compacting in planting pit around tree, and free of stones, roots, plants, sod, clods, clay lumps, pockets of coarse sand, concrete slurry, concrete layers or chunks, cement, plaster, building debris, and other extraneous materials harmful to plant growth.

    1. Mixture: Well-blended mix of two parts excavated soil to one part planting soil.
    2. Planting Soil: Planting soil as specified in Section 329115 “Soil Preparation”.

2.3 TREE-STABILIZATION MATERIALS

A. Trunk-Stabilization Materials:

    1. Upright and Guy Stakes: Rough-sawn, sound, new hardwood free of knots, holes, cross grain, and other defects, 2-by-2-inch nominal by length indicated, pointed at one end.

2. Wood Deadmen: Timbers measuring 8 inches in diameter and 48 inches long, treated with specified wood preservative treatment by pressure process.
3. Flexible Ties: Wide rubber or elastic bands or straps.
4. Guys and Tie Wires: ASTM A 641/A 641M, Class 1, galvanized-steel wire, two-strand, twisted, 0.106 inch in diameter.
5. Tree-Tie Webbing: UV-resistant polypropylene or nylon webbing with brass grommets.
6. Guy Cable: Five-strand, 3/16-inch- diameter, galvanized-steel cable, fitted with zinc-coated 3/8-inch galvanized eyebolts at ends.
7. Flags: Standard surveyor's plastic flagging tape, white, 6 inches long.

B. Root-Ball-Stabilization Materials:

1. Upright Stakes and Horizontal Hold-Down: Rough-sawn, sound, new hardwood or softwood, free of knots, holes, cross grain, and other defects, 2-by-2-inch nominal by length indicated; stakes pointed at one end.
2. Wood Screws: Hot-dip galvanized or stainless steel.

2.4 WATERING DEVICES

A. Slow-Release Watering Device: Standard product manufactured for drip-irrigation of plants and emptying its water contents over a period of 2 to 9 hours; manufactured from UV-light stabilized nylon-reinforced polyethylene sheet, PVC, or HDPE plastic.

B. Watering devices should be checked each week to ensure that they are properly functioning.

2.5 MISCELLANEOUS PRODUCTS

A. Organic Mulch: Shredded hardwood as specified in Section 329300 "Exterior Plants."

B. Anti-desiccant: Water-insoluble emulsion, permeable moisture retarder, film forming, for trees. Deliver in original, sealed, and fully labeled containers and mix according to manufacturer's written instructions.

C. Burlap: Non-synthetic, biodegradable.

D. Pesticides: Pesticide registered and approved by EPA, acceptable to authorities having jurisdiction, and of type recommended in writing by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.

1. Pre-Emergent Herbicide (Selective and Non-Selective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer.
2. Post-Emergent Herbicide (Selective and Non-Selective): Effective for controlling weed growth that has already germinated.

E. Planting Tablets: Tightly compressed chip type, long-lasting, slow-release, commercial-grade planting fertilizer in tablet form. Tablets shall break down with soil bacteria, converting nutrients into a form that can be absorbed by plant roots.

1. Size: 5-gram tablets.
2. Nutrient Composition: 20 percent nitrogen, 10 percent phosphorous, and 5 percent potassium, by weight plus micronutrients.

F. Weed-Control Barriers:

1. Nonwoven Geotextile Filter Fabric: Polypropylene or polyester fabric, 3 oz./sq. yd. minimum, composed of fibers formed into a stable network so that fibers retain their relative position. Fabric shall be inert to biological degradation and resist naturally encountered chemicals, alkalis, and acids.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Erosion and Sedimentation Control: Examine the site to verify that temporary erosion- and sedimentation-control measures are in place. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross transplanting areas.

B. For the record, prepare written report, endorsed by arborist, listing conditions detrimental to transplanting work and tree protection and health.

C. Proceed with transplanting only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, other facilities, turf areas, and other plants and planting areas from damage caused by transplanting operations.

B. Utility Locator Service: Notify "Miss Utility" for area where Project is located before beginning excavation when located within Public Space and contract with a private firm to locate utilities on Federal Government Property. Private utility locator service companies and employees to be approved by the Federal Government to perform work on Federal Government Property.

C. Locate and clearly identify tree for transplanting. Tie a 1-inch blue-vinyl tape around each tree at 54 inches above the ground.

D. Lay out transplant location. Stake location, adjust locations when requested and obtain Landscape Architect's acceptance of layout before transplanting. Make minor adjustments as required.

E. Apply anti-desiccant to trees uniformly, using power spray to provide an adequate film over trunks (before wrapping), branches, stems, twigs, and foliage to protect during extracting, handling, and transportation.

1. If deciduous trees are moved in full leaf, spray with anti-desiccant before extracting and again two weeks after transplanting.

F. Wrap trees with burlap fabric over trunks, branches, stems, twigs, and foliage to protect from wind and other damage during extracting, handling, and transporting.

3.3 PREPARATORY PRUNING

A. Root Pruning: Perform preparatory root pruning under direction of arborist as far in advance of extracting each tree as the Project Schedule allows.

1. Dig exploratory pits or trench by hand or with air-spade around perimeter of tree at indicated root-ball width to determine locations of main lateral roots.
2. Dig trench by hand or with tree spade around perimeter of tree at indicated root-ball width to the depth of the root system. Do not use a backhoe or other equipment that rips, tears, or pulls roots.
3. Root-Ball Width: Minimum 9 inches of root-ball diameter, or least dimension for non-round root balls, for each inch of tree caliper being transplanted.
4. If encountering large, main lateral roots, expose roots beyond excavation limits as required to bend and redirect them without breaking.
5. Use narrow-tine spading forks to comb soil to expose roots with minimal damage to root system.
6. Cut exposed roots manually with sharp pruning instruments; do not break, tear, chop, or slant the cuts. Do not use a backhoe or other equipment that rips, tears, or pulls roots.
7. Do not paint or apply sealants on cut root ends.
8. Backfill trench with excavated soil.

B. Crown Pruning (Tip Pruning):

1. Perform preparatory crown pruning only as directed by arborist and approved in writing by the Landscape Architect. Follow procedures as specified in "Crown Pruning" Article.

3.4 EXCAVATION AND PLANTING EQUIPMENT

A. Tree Spade: Track-mounted mechanized tree mover; sized according to manufacturer's size recommendation for each tree being transplanted.

3.5 EXCAVATING PLANTING PITS

A. General: Excavate under supervision of the arborist.

1. Excavate planting pits or trenches with sides sloping. Trim perimeter of bottom leaving center area of bottom raised slightly to support root ball and assist in drainage away from center. Do not further disturb base. Ensure that root ball will sit on undisturbed base soil. Scarify sides of planting pit smeared or smoothed during excavation.
2. Excavate approximately three times as wide as root ball.
3. Keep excavations covered or otherwise protected until replanting trees.

B. Obstructions: Notify Landscape Architect if unexpected rock or obstructions detrimental to trees are encountered in excavations.

1. Hardpan Layer: Drill 6-inch- diameter holes, 24 inches apart, into free-draining strata or to a depth of 10 feet, whichever is less, and backfill with free-draining material.

C. Seepage: Notify Landscape Architect if subsoil conditions evidence unexpected water seepage into tree-planting pits.

D. Drainage: Fill planting pit or trench with 6 inches of water and time the infiltration rate of the soil. If the drainage rate is less than 0.25 inch per hour, notify Landscape Architect to determine need for subsurface drainage.

E. Saline or Sodic Soils: Completely fill excavations with water and allow to percolate away before positioning trees.

3.6 EXTRACTING TREES

A. General: Extract trees under supervision of the arborist and Landscape Architect.

B. Orientation Marking: Mark the north side of each tree with non-permanent paint before extracting.

C. Root-Ball Width: Minimum 12 inches of root-ball diameter, or least dimension for non-round root balls, for each inch of tree caliper being transplanted.

D. Root-Ball Depth: As determined by the arborist for each species and size of tree and for site conditions at original and planting locations.

E. Digging:

1. Dig and clear a pit by hand or with tree spade to the depth of the root system as defined by the Arborist. Do not use a backhoe or other equipment that rips, tears, or pulls roots.
2. Use narrow-tine spading forks to comb soil to expose roots with minimal damage to root system.
3. If encountering large, main lateral roots, expose roots beyond excavation limits as required to bend and redirect them without breaking.
4. Cut exposed roots manually with sharp pruning instruments; do not break, tear, chop, or slant the cuts. Do not paint or apply sealants on cut root ends.
5. Construct box tight against root system sides and bottom as pit is dug. Brace and support box to prevent breaking of root ball.
6. Temporarily support and protect exposed roots from damage until they are permanently redirected and covered with soil. Cover roots with burlap and keep them moist until planted.

F. Extracting with Tree Spade: Use the same tree spade to extract the tree as will be used to transport and plant the tree.

1. Do not use tree spade to move trees larger than the manufacturer's maximum size recommendation for the tree spade being used.
2. When extracting the tree, center the trunk within the tree spade and move tree with a solid ball of earth.

3.7 PLANTING

A. Planting Standard: Perform planting according to ANSI A300 (Part 6) unless otherwise indicated.

B. Fill excavations with water and allow to percolate away before positioning trees.

C. Before planting, verify that root flare is visible at top of root ball. If root flare is not visible, carefully remove soil in a level manner from the root ball to where the top-most root emerges

from the trunk. After soil removal to expose the root flare, verify that root ball still meets size requirements.

D. Ensure that root flare is visible after planting.

E. Remove injured roots by cutting cleanly; do not break. Do not paint or apply sealants on cut root ends.

F. Orientation: Position the tree so that its north side, marked before extracting, is facing north in its new location.

G. Set tree plumb and in center of planting pit with the top of root flare (not the adventitious roots or graft swell) one (1) inch above adjacent finish grades.

1. Use specified backfill soil for backfill.
2. If area under the tree was initially dug too deep, add backfill to raise it to the correct level and thoroughly tamp the added soil to prevent settling.
3. After placing some backfill around root ball to stabilize plant, remove any foreign materials used to hold the ball above that point and begin backfilling.
4. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
5. Redirect exposed root ends downward in backfill areas where possible. Hand-expose roots as required to bend and redirect them without breaking. If encountered immediately adjacent to location of new construction and redirection is not practical, cut roots approximately three (3) inches back from new construction and as required for root pruning.
6. Place planting tablets in each planting pit when pit is approximately one-half filled; in amounts recommended by arborist. Place tablets beside the root ball about one (1) inch from root tips; do not place tablets in bottom of the hole.
7. Continue backfilling process. Water again after placing and tamping final layer of soil.
8. Remove any excess soil from the site.

H. Planting with Tree Spade: Use the same tree spade for planting as was used to extract and transport the tree. Do not use tree spade for trees larger than the manufacturer's maximum size recommendation for the tree spade being used.

I. Slopes: When planting on slopes, set the tree so the root flare on the uphill side is flush with the surrounding soil on the slope; the edge of the root ball on the downhill side will be above the surrounding soil. Apply enough soil to cover the downhill side of the root ball.

3.8 CROWN PRUNING

A. Prune branches as directed by arborist and approved by the Landscape Architect.

1. Prune to remove only injured, broken, dying, or dead branches. Do not prune for shape.
2. Do not remove or reduce living branches to compensate for root loss caused by cutting root system or to improve natural tree form.
3. Pruning Standards: Perform pruning according to ANSI A300 (Part 1).

B. Unless otherwise directed by arborist and acceptable to Landscape Architect, do not cut tree leaders.

C. Cut branches with sharp pruning instruments; do not break or chop.

D. Do not paint or apply sealants to wounds.

E. Provide subsequent maintenance during Contract period as recommended by arborist and approved by the Landscape Architect.

F. Chip removed branches and dispose of off-site.

3.9 TREE STABILIZATION

A. Trunk Stabilization by Staking and Guying: Install trunk stabilization as follows unless otherwise indicated on Drawings or directed by arborist.

1. Site-Fabricated Staking-and-Guying Method: Install no fewer than three guys spaced equally around tree.

a. Securely attach guys to stakes 30 inches long, driven to grade. Adjust spacing to avoid penetrating root balls or root masses. Provide turnbuckle for each guy wire and tighten securely.
b. For trees more than 6 inches in caliper, anchor guys to wood deadmen buried at least 36 inches below grade. Provide turnbuckle for each guy wire and tighten securely.
c. Attach flags to each guy wire, 30 inches above finish grade.
d. Paint turnbuckles with luminescent white paint.

3.10 MULCHING

A. Install weed-control barriers before mulching according to manufacturer's written instructions. Completely cover area to be mulched, overlapping edges a minimum of 12 inches (300 mm) and secure seams with galvanized pins.

B. Organic Mulch: Apply 3-inch average thickness of organic mulch extending 12 inches beyond edge of individual planting pit, and finish level with adjacent finish grades. Do not place mulch within three (3) inches of trunks or stems.

3.11 INSTALLING SLOW-RELEASE WATERING DEVICE

A. Provide one device for each tree.

B. Place device on top of the mulch at base of tree and fill with water according to manufacturer's written instructions.

C. Test to make sure the device is not faulty, and the water is able to be released.

3.12 TREE MAINTENANCE

A. Perform tree maintenance as recommended by arborist and approved by the Landscape Architect. Maintain arborist observation of transplanting work.

B. Maintain trees by cultivating, watering, weeding, fertilizing, mulching, restoring planting saucers, adjusting and repairing tree-stabilization devices, resetting to proper grades or vertical position, and performing other operations as required to establish healthy, viable plantings. Treat as

required to keep trees free of insects and disease. Prune only with the approval of the Landscape Architect and under the supervision of the Arborist.

C. From time of preparatory root pruning measure soil moisture adjacent to edge of each root ball weekly. Record findings and weather conditions.

D. Fill areas of soil subsidence with backfill soil. Replenish mulch materials damaged or lost in areas of subsidence.

E. Apply treatments as required to keep tree materials, planted areas, and soils free of pests and pathogens or disease. Use integrated pest management practices whenever possible to minimize the use of pesticides and reduce hazards. Treatments include physical controls such as hosing off foliage, mechanical controls such as traps, and biological control agents.

F. Pesticide Application: Apply pesticides and other chemical products and biological control agents in accordance with authorities having jurisdiction and manufacturer's written instructions. Coordinate applications with Government's operations and others in proximity to the Work. Notify Government before each application is performed.

1. Pre-Emergent Herbicides (Selective and Non-Selective): Apply in accordance with manufacturer's written instructions. Do not apply to seeded areas.
2. Post-Emergent Herbicides (Selective and Non-Selective): Apply only as necessary to treat already-germinated weeds and in accordance with manufacturer's written instructions.

G. Reports: Have arborist prepare monthly inspection reports.

3.13 REPAIR AND REPLACEMENT

A. General: Repair or replace transplanted trees and other plants indicated to remain or be relocated that are damaged by construction operations, in a manner recommended by the arborist and approved by the Landscape Architect.

1. Submit details of proposed pruning and repairs.
2. Perform repairs of damaged trunks, branches, and roots within 24 hours according to arborist's written instructions.
3. Replace trees and other plants that cannot be repaired and restored to full-growth status, as determined by the Landscape Architect.

B. Remove and replace trees that are more than 15 percent dead or in an unhealthy condition before the end of the corrections period or are damaged during construction operations that the Landscape Architect determines are incapable of restoring to normal growth pattern.

1. Provide new trees of same size as those being replaced for each tree of 4 inches or smaller in caliper size.
2. Provide one new tree(s) of 6-inch caliper size for each tree being replaced that measures more than 6 inches in caliper size.
3. Species of Replacement Trees: Same species being replaced.

3.14 CLEANUP AND PROTECTION

A. During transplanting, keep adjacent paving and construction clean and work area in an orderly condition.

B. Protect trees from damage due to transplanting operations and operations of other contractors and trades. Maintain protection during transplanting and maintenance periods. Treat, repair, or replace damaged plantings.

C. After planting and before Substantial Completion, remove tags, markings, tie tape, labels, wire, burlap, and other debris from transplanted trees, planting areas, and Project site.

3.15 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Except for materials indicated to be recycled, remove surplus soil, excess excavated material, waste materials, displaced plants, trash, and debris, and legally dispose of them off Government's property.

END OF SECTION

This page is intentionally left blank.

SECTION 33 14 15 - SITE WATER DISTRIBUTION PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Water-distribution piping and related components outside the building for combined domestic water service and fire-suppression water service and terminated 5 ft. from building. Terminate water-service piping with appropriate fitting for extension by Division 22.

B. Related Requirements:

1. Section 211300 "Fire Protection."

1.2 DEFINITIONS

A. CDA: Copper Development Association.

B. EPDM: Ethylene-propylene-diene terpolymer rubber.

C. PA: Polyamide (nylon) plastic.

D. PE: Polyethylene plastic.

E. PP: Polypropylene plastic.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings:

1. Detail precast concrete vault assemblies and indicate dimensions, method of field assembly, and components.

1.4 INFORMATIONAL SUBMITTALS

A. Field Quality-Control Submittals:

1. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For each type of product indicated.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Preparation for Transport: Prepare piping, valves, meters, backflow prevention devices, and fire hydrants according to the following:

1. Ensure that piping, valves, meters, backflow prevention devices, and fire hydrants are dry and internally protected against rust and corrosion.
2. Protect threaded ends and flange faces against damage.
3. Set piping, valves, meters, backflow prevention devices, and fire hydrants in best position for handling and to prevent rattling.

B. During Storage: Use precautions for piping, valves, meters, backflow prevention devices, and fire hydrants according to the following:

1. Do not remove end protectors unless necessary for inspection; then reinstall for storage.
2. Protect from weather. Store indoors and maintain temperature higher than ambient dew point temperature. Support off the ground or pavement in watertight enclosures when outdoor storage is necessary.

C. Handling: Use sling to handle products if size requires handling by crane or lift. Rig products to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

D. Deliver piping with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe-end damage and to prevent entrance of dirt, debris, and moisture.

E. Protect stored piping from moisture and dirt. Elevate above grade. Do not exceed structural capacity of floor when storing inside.

F. Protect flanges, fittings, and specialties from moisture and dirt.

G. Store plastic piping protected from direct sunlight. Support to prevent sagging and bending.

1.7 PROJECT CONDITIONS

A. Interruption of Existing Water-Distribution Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water-distribution service in accordance with requirements indicated:

1. Notify Architect no fewer than two days in advance of proposed interruption of service.
2. Do not proceed with interruption of water-distribution service without Architect's written permission.

1.8 COORDINATION

A. Coordinate connection to water main with utility company.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Comply with requirements of utility company supplying water. Include tapping of water mains and backflow prevention.

B. Comply with standards of authorities having jurisdiction for domestic water-service piping, including materials, installation, testing, and disinfection.

C. Comply with standards of authorities having jurisdiction for fire-suppression water-service piping, including materials, hose threads, installation, and testing.

D. Piping materials to bear label, stamp, or other markings of specified testing agency.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.

F. Comply with ASTM F645 for selection, design, and installation of thermoplastic water piping.

G. Comply with FM Approvals' "Approval Guide" and/or UL's "Fire Protection Equipment Directory" for fire-suppression water-service products.

H. Comply with NFPA 24 for materials, installations, tests, flushing, and valve and hydrant supervision for fire-suppression water-service piping.

I. All piping and appurtenances intended to convey or dispense water for human consumption are to comply with the U.S. Safe Drinking Water Act (SDWA), with requirements of the Authority Having Jurisdiction (AHJ), and with NSF 61/NSF 372 or are certified in compliance with NSF 61/NSF 372 by an ANSI-accredited third-party certification body, that the weighted average lead content at wetted surfaces is less than or equal to 0.25 percent.

2.2 PIPING MATERIALS

A. Comply with requirements in "Piping Applications" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and service sizes.

B. Potable-water piping and components comply with NSF 14, NSF 61, and NSF 372. Include marking "NSF-pw" on piping.

2.3 DUCTILE-IRON PIPE AND FITTINGS

A. Mechanical-Joint, Ductile-Iron Pipe:

1. AWWA C151/A21.51, with mechanical-joint bell and plain spigot end.
2. AWWA C104/A21.4 cement mortar-lined.
3. All Ductile Iron Pipe materials shall be Class 52.
4. All Gaskets shall be MJ Field Lok at all joints and all pipes shall have MEGALUG Mechanical Joint Retraint or approved equivalent.

B. Mechanical-Joint, Ductile-Iron Fittings:

1. AWWA C110, ductile- or gray-iron standard pattern or AWWA C153/A21.53, ductile-iron compact pattern.
2. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.
3. AWWA C104/A21.4 cement mortar-lined.
4. All Ductile Iron Fittings shall be Class 52.
5. All Gaskets shall be MJ Field Lok at all joints and all fittings shall have MEGALUG Mechanical Joint Retraint or approved equivalent.

2.4 PIPING JOINING MATERIALS

A. Gaskets for Ferrous Piping and Copper-Alloy Tubing: ASME B16.21, asbestos free.

B. Plastic Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer unless otherwise indicated.

2.5 ENCASEMENT FOR PIPING

A. Standards: ASTM A674 or AWWA C105/A21.5.

B. Form: Sheet or tube.

C. Material: Linear low-density PE film of 0.008-inch minimum thickness or high-density, cross-laminated PE film of 0.004-inch minimum thickness.

D. Color: Black.

2.6 GATE VALVES

A. Gate Valves - AWWA, Cast Iron:

1. Source Limitations: Obtain gate valves - AWWA, cast iron, from single manufacturer.
2. Gate Valves - Nonrising Stem, Resilient Seated: Cast- or ductile-iron body and bonnet, with bronze or cast- or ductile-iron gate, resilient seats, bronze stem, and stem nut.

    a. Standards: AWWA C509 or AWWA C515.
    b. Minimum Pressure Rating: 250 psig.
    c. End Connections: Mechanical joint.
    d. Interior Coating: Complying with AWWA C550.

2.7 GATE VALVE ACCESSORIES AND SPECIALTIES

A. Tapping-Sleeve Assemblies: Sleeve and valve compatible with drilling machine.

1. Source Limitations: Obtain tapping-sleeve assemblies from single manufacturer.
2. Standard: MSS SP-60.
3. Tapping Sleeve: Cast- or ductile-iron or stainless steel, two-piece bolted sleeve with flanged outlet for new branch connection. Include sleeve matching size and type of pipe material being tapped and with recessed flange for branch valve.
4. Valve: AWWA, cast-iron, nonrising-stem, resilient-seated gate valve with one raised face flange mating tapping-sleeve flange.

B. Valve Boxes: Comply with AWWA M44 for cast-iron valve boxes. Include top section, adjustable extension of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over valve and with a barrel approximately 5 inches in diameter.

1. Operating Wrenches: Steel, tee-handle with one pointed end, stem of length to operate deepest buried valve, and socket matching valve operating nut.

2.8 WATER METERS

A. Water Meter - Utility Company Furnished: Water meters will be furnished and shall be a Neptune Ultrasonic Meter.

1. Utility Company: City of Annapolis.

2.9 CONCRETE VAULTS

A. Concrete Vault - Precast, Reinforced Concrete: Designed for A-16 load designation in accordance with ASTM C857 and made in accordance with ASTM C858.

1. Ladder: ASTM A36/A36M, steel or PE-encased steel steps.
2. Manhole:

a. ASTM A48/A48M Class No. 35A minimum tensile strength, gray-iron traffic frame and cover; 24-inch minimum diameter unless otherwise indicated.
b. ASTM A536, Grade 60-40-18, ductile-iron traffic frame and cover: 24-inch minimum diameter unless otherwise indicated.

3. Drain: ASME A112.6.3, cast-iron floor drain with outlet of size indicated. Include body anchor flange, light-duty cast-iron grate, bottom outlet, and integral or field-installed bronze ball or clapper-type backwater valve.

2.10 FIRE HYDRANTS

A. Fire Hydrants - Dry Barrel:
1. Source Limitations: Obtain fire hydrants - dry barrel, from single manufacturer, shall be Kennedy, and approved by the City of Annapolis.
2. Pressure Rating: 250 psig.
3. Standard: AWWA C502.
4. Freestanding configuration, with one NPS 4-1/2 and two NPS 2-1/2 outlets, 5-1/4-inch main valve, drain valve, and NPS 6 mechanical-joint inlet. Include interior coating in accordance with AWWA C550. Hydrant to have cast-iron body, compression-type valve opening against pressure and closing with pressure.
5. Standards: UL 246, and FM Global approved.
6. Freestanding configuration, with one NPS 4-1/2 and two NPS 2-1/2 outlets, 5-1/4-inch main valve, drain valve, and NPS 6 mechanical-joint inlet. Hydrant to have cast-iron body, compression-type valve opening against pressure and closing with pressure.

a. Outlet Threads: NFPA 1963, with external hose thread used by local fire department. Include cast-iron caps with steel chains.
b. Operating and Cap Nuts: Pentagon, 1-1/2 inches point to flat.

c. Direction of Opening: Open hydrant valve by turning operating nut to left or counterclockwise.
d. Exterior Finish: Red alkyd-gloss enamel paint unless otherwise indicated.

PART 3 - EXECUTION

3.1 EARTHWORK

A. Comply with excavating, trenching, and backfilling requirements in Section 312000 "Earth Moving."

3.2 PIPING APPLICATIONS

A. Transition couplings and special fittings with pressure ratings at least equal to piping pressure rating may be used unless otherwise indicated.

B. Do not use flanges or unions for underground piping.

C. Flanges, unions, grooved-end-pipe couplings, and special fittings may be used, instead of joints indicated, on aboveground piping and piping in vaults.

D. Underground Combined Water-Service and Fire-Service-Main Piping NPS 6 to NPS 12 to be any of the following:

1. Ductile-iron, see applications for Pipe and Fittings in Section 2.3.

3.3 VALVE APPLICATIONS

A. General Application: Use mechanical-joint-end valves for NPS 3 and larger underground installation. Use threaded- or flanged-end valves for installation in vaults. Use UL/FM Global, nonrising-stem gate valves for installation with indicator posts. Use corporation valves and curb valves with ends compatible with piping, for NPS 2 and smaller installation.

B. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:

1. Underground Valves, NPS 3 and Larger: AWWA, cast-iron, nonrising-stem, high-pressure, resilient seated gate valves with valve box.
2. Underground Valves, NPS 4 and Larger, for Indicator Posts: UL/FM Global, cast-iron, nonrising-stem gate valves with indicator post.
3. Use the following for valves in vaults and aboveground:

a. Gate Valves, NPS 2 and Smaller: Bronze, nonrising stem.
b. Gate Valves, NPS 3 and Larger: AWWA, cast iron, OS&Y rising stem, resilient seated.
c. Check Valves: AWWA C508, swing type.

4. Detector Check Valves: Use for water-service piping in vaults and aboveground to detect unauthorized use of water.

3.4 INSTALLATION OF PIPING

A. Water-Main Connection:

1. Arrange with utility company for tap of size and in location indicated in water main.
2. Tap water main in accordance with requirements of water utility company and of size and in location indicated.

B. Make connections larger than NPS 2 with tapping machine according to the following:

1. Install tapping sleeve and tapping valve in accordance with MSS SP-60.
2. Install tapping sleeve on pipe to be tapped. Position flanged outlet for gate valve.
3. Use tapping machine compatible with valve and tapping sleeve; cut hole in main. Remove tapping machine and connect water-service piping.
4. Install gate valve onto tapping sleeve. Comply with MSS SP-60. Install valve with stem pointing up and with valve box.

C. Comply with NFPA 24 for fire-service-main piping materials and installation.

1. Install PE corrosion-protection encasement in accordance with ASTM A674 or AWWA C105/A21.5.

D. Install ductile-iron, water-service piping in accordance with AWWA C600 and AWWA M41.

1. Install PE corrosion-protection encasement in accordance with ASTM A674 or AWWA C105/A21.5.

E. Bury piping with depth of cover over top at least 48 inches, with top at least 12 inches below level of maximum frost penetration.

F. Extend water-service and fire-suppression water-service piping and connect to water-supply source and building water-piping and fire-suppression piping systems at outside face of building wall in locations and pipe sizes indicated.

1. Terminate water-service and fire-suppression water-service piping at building wall until building water-piping and fire-suppression piping systems are installed. Terminate piping with caps, plugs, or flanges as required for piping material. Make connections to building water-piping and fire-suppression piping systems when those systems are installed.

G. Install underground piping with restrained joints at horizontal and vertical changes in direction. Use restrained-joint piping, thrust blocks, anchors, tie-rods and clamps, and other supports.

H. Comply with Section 211200 "Fire-Suppression Standpipes," Section 211313 "Wet-Pipe Sprinkler Systems," and Section 211316 "Dry-Pipe Sprinkler Systems" for fire-suppression-water piping inside the building.

I. Comply with Section 221116 "Domestic Water Piping" for potable-water piping inside the building.

3.5 JOINT CONSTRUCTION

A. Comply with Section 330500 "Common Work Results for Utilities" for basic piping joint construction.

B. Make pipe joints according to the following:

1. Ductile-Iron Piping, Gasketed Joints for Water-Service Piping: AWWA C600 and AWWA M41.
2. Ductile-Iron Piping, Gasketed Joints for Fire-Service-Main Piping: UL 194.

3.6 INSTALLATION OF ANCHORAGE

A. Anchorage: Install water-distribution piping with restrained joints. Anchorages and restrained-joint types that may be used include the following:

1. Concrete thrust blocks.
2. Locking mechanical joints.
3. Set-screw mechanical retainer glands.
4. Bolted flanged joints.

B. Install anchorages for tees, plugs and caps, bends, crosses, valves, and hydrant branches. Include anchorages for the following piping systems:

1. Gasketed-Joint, Ductile-Iron, Water-Service Piping: In accordance with AWWA C600.
2. Fire-Service-Main Piping: In accordance with NFPA 24.

C. Apply full coat of asphalt or other acceptable corrosion-resistant material to surfaces of installed ferrous anchorage devices.

3.7 INSTALLATION OF VALVES

A. AWWA Gate Valves: Comply with AWWA C600 and AWWA M44. Install each underground valve with stem pointing up and with valve box.

B. AWWA Valves Other Than Gate Valves: Comply with AWWA C600 and AWWA M44.

C. UL-Listed or FM Global-Approved Gate Valves: Comply with NFPA 24. Install each underground valve and valves in vaults with stem pointing up and with vertical cast-iron indicator post.

D. UL-Listed or FM Global-Approved Valves Other Than Gate Valves: Comply with NFPA 24.

E. MSS Valves: Install as component of connected piping system.

F. Comply with requirements for concrete piers in Section 033000 "Cast-in-Place Concrete" for support of valves and piping not direct buried.

3.8 INSTALLATION OF WATER METERS

A. Install water meters, piping, and specialties in accordance with utility company's written instructions.

B. Water Meters:

1. Install detector-type water meters in meter vault in accordance with AWWA M6. Include shutoff valves on water meter inlets and outlets and full-size valved bypass around meters. Support meters, valves, and piping on brick or concrete piers.

C. Support water meters and piping NPS 3 and larger on concrete piers. Comply with requirements for concrete piers in Section 033000 "Cast-in-Place Concrete."

3.9 INSTALLATION OF WATER METER BOXES

A. Install water meter boxes in paved areas flush with surface.

B. Install water meter boxes in grass or earth areas with top 2 inches above surface.

3.10 INSTALLATION OF CONCRETE VAULTS

A. Install precast concrete vaults in accordance with ASTM C891.

3.11 INSTALLATION OF FIRE HYDRANTS

A. Install each fire hydrant with separate gate valve in supply pipe, anchor with restrained joints or thrust blocks, and support in upright position.

B. Wet-Barrel Fire Hydrants: Install with valve below frost line. Provide for drainage.

C. AWWA Fire Hydrants: Comply with AWWA M17.

D. UL/FM Global Fire Hydrants: Comply with NFPA 24.

3.12 INSTALLATION OF FIRE DEPARTMENT CONNECTIONS

A. Install ball drip valves at each check valve for fire department connection to mains.

B. Install protective pipe bollards [**on two sides of**] [**on three sides of**] <**Insert arrangement**> each fire department connection. Pipe bollards are specified in Section 055000 "Metal Fabrications."

3.13 CONNECTIONS

A. See Section 330500 "Common Work Results for Utilities" for piping connections to valves and equipment.

B. Connect water-distribution piping to existing water main. Use tapping sleeve and tapping valve.

C. Connect water-distribution piping to interior domestic water and fire-suppression piping.

3.14 FIELD QUALITY CONTROL

A. Piping Tests: Conduct piping tests before joints are covered and after concrete thrust blocks have hardened sufficiently. Fill pipeline 24 hours before testing and apply test pressure to stabilize system. Use only potable water.

B. Hydrostatic Tests: Test at not less than one-and-one-half times working pressure for two hours.

1. Increase pressure in 50 psig increments and inspect each joint between increments. Hold at test pressure for one hour; decrease to 0 psig. Slowly increase again to test pressure and hold for one more hour. Maximum allowable leakage is 2 quarts per hour per 100 joints. Remake leaking joints with new materials and repeat test until leakage is within allowed limits.

C. Prepare reports of testing activities.

3.15 IDENTIFICATION

A. Install continuous underground detectable warning tape during backfilling of trench for underground water-distribution piping. Locate below finished grade, directly over piping. Underground warning tapes are specified in Section 312000 "Earth Moving."

3.16 CLEANING

A. Clean and disinfect water-distribution piping as follows:

1. Purge new water-distribution piping systems and parts of existing systems that have been altered, extended, or repaired before use.
2. Use purging and disinfecting procedure prescribed by authorities having jurisdiction or, if method is not prescribed by authorities having jurisdiction, use procedure described in NFPA 24 for flushing of piping. Flush piping system with clean, potable water until dirty water does not appear at points of outlet.
    a. Drain system or part of system of previous solution and refill with water/chlorine solution containing at least 200 ppm of chlorine; isolate and allow to stand for three hours.
    b. After standing time, flush system with clean, potable water until no chlorine remains in water coming from system.
    c. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedure if biological examination shows evidence of contamination.

B. Prepare reports of purging and disinfecting activities.

END OF SECTION

SECTION 33 41 99 - STORMWATER MANAGEMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Stormwater Management Plans and Report approved (green stamped) by the Maryland Department of the Environment.

1.2 SUMMARY

A. Section includes requirements for the inspection of stormwater management (SWM) facilities during construction activities as specified and submission of a stormwater management facility as-built certification package for each stormwater management facility constructed to the Maryland Department of the Environment within 45 calendar days of completing construction of all stormwater management facilities.

1.3 INFORMATION SUPPLIED BY THE OWNER

A. Upon written request, the Owner will provide CADD files in AutoCAD format and the approved Final SWM Report in PDF format to facilitate completion of the SWM facility as-built certification package.

1.4 STORMWATER MANAGEMENT CERTIFYING ENGINEER

A. The Contractor shall engage a Maryland registered Professional Engineer to perform the duties in this specification section.

B. The Certifying Engineer is responsible for assembling and certifying the SWM certification package. Duties include adequately documenting that the SWM facilities have been construction as specified and performing inspections during pertinent construction activities for the SWM facilities and practices. The Certifying Engineer shall be a Professional Engineer (P.E.) registered and licensed in the State of Maryland and who has at least three years of experience in SWM facility design and SWM facility construction.

C. The Certifying Engineer shall have the option to use designees, who are under the direct supervision of the Certifying Engineer, to perform the following duties on behalf of the Certifying Engineer.

1. Documenting that the SWM facilities have been constructed as specified including writing activity inspection reports, taking photographs, and obtaining copies of material approvals and material test reports.

2. Performing inspections during pertinent construction activities for the SWM facilities and practices, completing the pertinent portions of the SWM facility as-built certification data tables.

3. When the Certifying Engineer elects to use designees, submit the names and resumes indicating their experience in the design and inspection of SWM facilities, of those designees authorized by the Certifying Engineer to Certifying Engineer. Only authorized designees may represent the Certifying Engineer for the limited duties specified.

1.5 STORMWATER MANAGEMENT FACILITY AS-BUILT CERTIFICATION PACKAGE

A. The SWM facility as-built certification package contains documentation that verifies that all SWM facilities and practices on the Contact have been constructed as specified or are functionally equivalent to the designs in the approved SWM Report.

B. The SWM facility as-built certification shall include the following for each SWM facility in the Contract, presented neatly and legibly, and organized in an easy to follow format.

1. SWM facility construction inspection reports. The inspection reports shall include the following:

   a. The SWM facility deification number and type of SWM facility or practice.
   b. The date and location of the activity.
   c. Photographs, taken during inspections, that clearly show the construction activities as listed on the pertinent SWM facility as-built data tables, with narrative descriptions of what appears in the photographs, the dates of the photographs were taken, and the locations.
   d. Verification of whether SWM facility as-built construction is as specified, noting any deviations from the Contract Documents and how the deviations have been addressed.

2. Photographs of SWM facilities and practices after all landscaping has been installed and established, with narrative descriptions of what appears in the photographs.

3. Copies of pertinent material approval forms.

4. Copies of pertinent materials and installation test reports and results.

5. Completed as-built certifications data tables.

6. Green line as-built surveys of the SWM facilities and practices signed and sealed by a Professional Land Surveyor (PLS) who is registered and licensed in the State of Maryland. The as-built survey data shall be overlaid on the appropriate Contract plan sheet(s) and profile sheets, at the same scale and datum, and are coordinately correct. The as-built survey data shall be green in color, clearly legible and easily distinguishable from the Contract Document information. The SWM facility as-built surveys shall include the following:

   a. Contours. One-foot contour intervals or otherwise match the contour intervals shown in the Contract Documents. Contours shall cover the entire footprint of the SWM facility or practice as well as inflow and outflow conveyances when ditches or similar features convey runoff into or out of SWM facilities and practices.
   b. Drainage Structures. Includes all drainage structures within the footprint of the SWM facility, including but not limited to inlets, manholes, flow splitters, risers, weirs, end sections, headwalls, and end walls. As-built data shall include but is not limited to top of structure elevations, structure lengths, and structure widths; pipe inverts; pipe sizes, materials, and flow directions; orifice elevations; opening sizes;

weir dimensions and elevations; check dam locations and dimensions; grates; and trash racks.

c. Riprap and Aggregate. Includes dimensions of riprap and other areas within the footprint of the SWM facility and practice that show a surface layer of aggregate or riprap, including forebays.

d. Embankment Information. Includes embankment heights, widths, and elevations; clay core locations, dimensions, and elevations; cut-off trench locations, dimensions, and elevations; pertinent filter diaphragm information; and pertinent pipe cradle information. Data that cannot be obtained from a field survey shall be provided by the Certifying Engineer for inclusion with the SWM facility as-built survey.

e. SWM Facility Maintenance Access Roads.

f. Fences. Includes fence that surrounds the footprint of the SWM facility or practice.

g. SWM Facility Profiles. Includes an overlay of green line as-built data on SWM facility profiles and typical sections including but not limited to check dam spacing, check dam top elevations, check dam dimensions, invert elevations, subdrain sizes, subdrain materials, aggregate and soil thicknesses, material types, clay core dimensions, and cut-off trench dimensions. Data that cannot be obtained from a field survey shall be provided by the Certifying Engineer for inclusion with the SWM facility as-built survey.

h. Certification. Seal, signature, license number, and date of license expiration of the PLS who completes the SWM facility as-built survey.

7. Applicable supporting computations demonstrating that the functionality of the SWM facilities and practices meet the approved designs as presented in the approved SWM Report. This is only necessary when tolerances are not met and shall include but is not limited to water surface elevations, freeboard, storage volumes, depths, and other pertinent SWM functionality data that demonstrates the SWM facility performances meets the approved design.

8. A narrative of justification for as-built deviations in SWM facilities and practices.

9. Seal, signature, license number, and date of license expiration of the Certifying Engineer.

1.6 SUBMITTALS AND APPROVAL PROCESS

1. Submittals and Approval Process

   a. Copies of all submission made to the MDE shall be provided to the Owner and Architect.

   b. Partial submittals of the SWM facility as- built package may be made as construction of each individual SWM facility and practice is completed. Otherwise, submit the entire SWM facility as-built package within 45 days of completion of construction activities associated with all SWM facilities and practices but not including establishment of the specified landscaping items. The landscaping phase of SWM facilities and practices need not be completed to submit the SWM facility as-built certification package for Structural Acceptance but is required for Final Approval.

2. Resubmit the SWM facility as-built package with responses to all MDE comments that may be received. Resubmit as many times as necessary, updating the SWM facility as-built package as needed to address all MDE comments, and making any field adjustments as needed to correct deficiencies, until MDE approval is obtained.

1.7 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.8 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Certifying Engineer Documentation: Submit one copy of the Certifying Engineer's resume to the Owner and Architect that includes following information.

1. Name of Certifying Engineer.
2. Maryland professional engineering or professional surveyor license number and expiration date.
3. Name of employer.
4. Contact Information.
5. Relevant work experience.
6. Proof of valid certification of the Maryland Department of the Environment (MDE) Responsible Personnel for Erosion and Sediment Control training course (formerly "Green Card"). Note: All certifications for the former course MDE Responsible Personnel Trailing for Erosion and Sediment Control ("Green Card") expired on December 31, 2016 and are no longer valid.

C. Shop Drawings:

1. Manholes: Include plans, elevations, sections, details, frames, and covers.
2. Weirs and Overflow Structures: Include plans, elevations, sections, and details.
3. Catch basins and stormwater inlets. Include plans, elevations, sections, details, frames, covers, and grates.

D. Shop Drawings:

1. Manholes: Include plans, elevations, sections, details, frames, and covers.
2. Weirs and Overflow Structures: Include plans, elevations, sections, and details.
3. Catch basins and stormwater inlets. Include plans, elevations, sections, details, frames, covers, and grates.

1.9 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer, testing agency.

B. Material and Product Certificates: For each type of material and product used.

C. Material Test Reports: For each material used, by a qualified testing agency.

D. Field quality-control reports.

1.10 REFERENCE DOCUMENTS

A. Maryland Department of the Maryland Approved Stormwater Management and Erosion Control Plans and Permit.

B. Maryland Department of the Environment General Permit for Stormwater Associated with Construction Related Activities.

1.11 QUALITY CONTROL

A. Inspection Agency: Contractor shall engage an independent Inspection Agency for complete inspection and testing of soils and compaction.

B. Notifications: The Contractor is required to notify the Owner and Architect 72 hours prior to the start of construction of Stormwater Management (SWM) Environmental Site Design (ESD) facilities for the purposes of the Maryland Department of the Environment As-Built requirements as indicated on the plans.

PART 2 - PRODUCTS

2.1 STORMWATER MANAGEMNET PRODUCTS AND MATERIALS

A. As indicated on the Contract Documents and Maryland Department of the Environment Approved Plans.

PART 3 - EXECUTION

3.1 STORMWATER MANAGEMENT CONSTRUCTION

A. Obtain the services from and designate a Certifying Engineer prior to beginning construction of SWM facilities and practices.

B. Failure to receive approval for the Certifying Engineer, failure to submit information about the Certifying Engineer designees, or failure of the Certifying Engineer, or the Certifying Engineer designees, to adequately monitor the specified construction activities will be grounds for replacement of the Certifying Engineer and reconstruction of all work on SWM facilities and practices that may have already been performed.

C. Perform all construction activities on SWM facilities and practices only in the presence of the Certifying Engineer or the Certifying Engineer designee. Failure to perform work in the presence of the Certifying Engineer or the Certifying Engineer designee will be grounds for removal and replacement of the Certifying, and reconstruction of all work that may have already been performed.

D. Prior to beginning or continuing construction activities of SWM facilities and practices, ensure the Certifying Engineer or the Certifying Engineer designee is present. If the Certifying Engineer or Certifying Engineer designee is not present, suspend work on SWM facilities and practices and do not resume until the Certifying Engineer or Certifying Engineer designee is present for the activities.

E. Whenever the Certifying Engineer or the Certifying Engineer designee indicates that SWM facilities and practices under construction do not match the Contract Documents, immediately correct the deficiencies before moving to the next construction activity associated with SWM facilities and practices. If it is not possible to correct deficiencies due to the site conditions or

constraints and not due to negligence and inadequate quality of work, cease work on SWM facilities and notify the Owner and Architect.

F. Upon completion of constructing SWM facilities and practices, perform an as-built survey of the completed facility. Complete installation and establishment of landscaping items need not be completed to perform the as-built survey of SWM facilities and practices.

G. Submit the SWM facility as-built certification package. Update SWM facilities as- built surveys when adjustments are made to address comments that may be received.

H. No additional compensation will be considered for addressing comments received on the submitted SWM facilities as-built certification package, revisions to the SWM facility as-built certification package, or any construction activities necessary to address comments that may have been received or necessary to revise the SWM facility as-built certification package.

3.2 RESPONSIBILITY OF THE CERTIFYING ENGINEER

A. Ensure that the Certifying Engineering performs the following:

1. Is present for all activities listed on the SWM as-built certification data tables, performs duties as specified, and records requisite information for the SWM facility as-built certification package. The Certifying Engineer may elect to use a designee as specified in this section. Ensure that the data is available at the Site and on-demand.

2. Prepares written inspection reports for construction activities associated with SWM facilities and practices. The Certifying Engineer may elect to use a designee as specified in this section. The inspection reports must include the following information.

    a. The SWM facility identification number.
    b. The date and location of the activity.
    c. Photographs of the activity with narrative descriptions.
    d. Whether SWM facility construction matches the Contract Documents, noting any deviations from the Contract Documents and how the deviations are addressed. Whenever deviations occur and exceed the specified tolerances, notify the Owner and Architect.

3. Completes the SWM facility as-built certification data tables in the Contract Documents.
4. Takes photographs during construction activities of the SWM facilities and practices and of the completed SWM facilities, including photographs with completed landscape planting installation and establishment. The Certifying Engineer may elect to use a designee as specified in this section.
5. Obtains copies of material approvals for items associated with the SWM facilities and practices. The Certifying Engineer may elect to use a designee as specified in this section.
6. Obtains copies of compaction test results for SWM facility embankments. The Certifying Engineer may elect to use a designee as specified in this section.
7. Alerts the Contractor when the SWM facilities and practices under construction do not match the Contract Documents and MDE approved Plans. The Certifying Engineer may elect to use a designee as specified in this section.
8. When necessary, performs all computations that demonstrate SWM facilities and practices function in the manner as presented in the approved Final SWM Report, including with all revisions to the report that may result from Redline Revisions. At a minimum, the parameters examined by the Certifying Engineer shall include but are not limited to storage volumes, discharge rates, velocities, detention times, water surface

elevations, freeboard, and all other information as recommended by the Certifying Engineer and as requested by the Owner, Architect or MDE.
9. Obtains copies of as-built surveys for the SWM facilities and practices.
10. Prepares the SWM facility as-built certification package.

3.3 STORMWATER MANAGEMENT CONSTRUCTION TOLERANCES

A. All stormwater management facilities shall be built with the specified tolerances:

1. Earthwork. Elevations within 3 in. of elevations specified in the Contract Documents.
2. Embankments, Clay Cores and Cut-off trenches. Elevations not less than the values specified.
3. Drainage Structures. Elevations within 1.2 inches (0.1 feet) of the values specified.
4. Pipe Inverts. Elevations with 1.2 inches (0.1 feet) of the values specified.
5. Riprap. Dimensions within 3 inches of dimensions specified.
6. Freeboard. Not less than the values specified.
7. Volumes. Not less than the values specified.
8. Aggregate, Sand, Bioretention Soil Mix and Mulch Thickness. Not less than the values specified.

B. When construction tolerances cannot be met due to unforeseen site conditions or constraints, ensure that calculations are performed by the Certifying Engineer before proceeding with the next construction activity associated with SWM facilities and practices. If, after performing computations, the Certifying Engineer determines that the SWM facilities do not meet the functional parameters in the approved Final SWM Report as constructed, reconstruct the SWM facilities to meet the functional parameters. If this is not possible due to the site conditions or constraints and not due to negligence and inadequate quality of work, cease work on SWM facilities and notify the Owner and Architect.

C. The Contractor shall make all necessary adjustments and repairs, at no additional cost to the owner, to bring each facility in compliance with the approved designs.

3.4 STORMWATER MANAGEMENT FACILITY MAINTENANCE

A. The Contractor shall be solely responsible for maintenance of all stormwater-related facilities until the Maryland Department of the Environment conducts the closeout inspection and releases the permit. The Contractor shall also perform any required maintenance to the facility to ensure full functionality, and any final required punch-list items as required by Owner, prior to final Owner acceptance of the facility.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Prepare test and inspection reports.

3.6 PROTECTION

A. Protect stormwater management facilities from contamination from sediment.

END OF SECTION

This page is intentionally left blank.

SECTION 33 42 00 - STORMWATER CONVEYANCE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. PE pipe and fittings.
2. PVC pipe and fittings.
3. Concrete pipe and fittings.
4. Non-pressure transition couplings.
5. Cleanouts.
6. Manholes.
7. Catch basins.
8. Pipe outlets.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Manholes: Include plans, elevations, sections, details, frames, and covers.
2. Catch basins, stormwater inlets. Include plans, elevations, sections, details, frames, covers, and grates.

1.4 INFORMATIONAL SUBMITTALS

A. Product Certificates: For each type of cast-iron soil pipe and fitting, from manufacturer.

B. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Do not store plastic manholes, pipe, and fittings in direct sunlight.

B. Protect pipe, pipe fittings, and seals from dirt and damage.

C. Handle manholes in accordance with manufacturer's written rigging instructions.

D. Handle catch basins and stormwater inlets in accordance with manufacturer's written rigging instructions.

1.7 FIELD CONDITIONS

A. Interruption of Existing Storm Drainage Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service in accordance with requirements indicated:

1. Notify Architect no fewer than two days in advance of proposed interruption of service.
2. Do not proceed with interruption of service without Architect's written permission.

PART 2 - PRODUCTS

2.1 CORRUGATED-PE PIPE AND FITTINGS

A. Source Limitations: Obtain corrugated-PE pipe and fittings from single manufacturer.

B. Corrugated-PE Drainage Pipe and Fittings NPS 3 to NPS 10: AASHTO M 252, Type S, with smooth waterway for coupling joints.

C. Corrugated-PE Pipe and Fittings NPS 12 to NPS 60: AASHTO M 294, Type S, with smooth waterway for coupling joints.

D. Corrugated-PE Silttight Couplings: PE sleeve with ASTM D1056, Type 2, Class A, Grade 2 gasket material that mates with pipe and fittings.

E. Corrugated-PE Soiltight Couplings: AASHTO M 294, corrugated, matching pipe and fittings.

2.2 PVC PIPE AND FITTINGS

A. Source Limitations: Obtain PVC pipe and fittings from single manufacturer.

B. NSF Marking: Comply with NSF 14, "Plastics Piping Systems Components and Related Materials," for plastic piping components. Include marking with "NSF-drain" for plastic storm drain and "NSF-sewer" for plastic storm sewer piping.

C. PVC Piping:

1. Pipe: ASTM D1785, Schedule 40 PVC, with plain ends for solvent-cemented joints.
2. Fittings: ASTM D2466, Schedule 40 PVC, socket type.

D. Adhesive Primer: ASTM F656.

2.3 CONCRETE PIPE AND FITTINGS

A. Source Limitations: Obtain concrete pipe and fittings from single manufacturer.

B. Reinforced-Concrete Sewer Pipe and Fittings: ASTM C76.

1. Bell-and-spigot or tongue-and-groove ends and gasketed joints with ASTM C443, rubber gaskets.
2. Class IV.

2.4 NONPRESSURE TRANSITION COUPLINGS

A. Comply with ASTM C1173, elastomeric, sleeve-type, reducing or transition coupling, for joining underground nonpressure piping. Include ends of same sizes as piping to be joined, and corrosion-resistant-metal tension band and tightening mechanism on each end.

B. Sleeve Materials:

1. For Concrete Pipes: ASTM C443, rubber.
2. For Plastic Pipes: ASTM F477, elastomeric seal or ASTM D5926, PVC.
3. For Dissimilar Pipes: ASTM D5926, PVC or other material compatible with pipe materials being joined.

C. Unshielded, Flexible Couplings:
1. Source Limitations: Obtain unshielded, flexible couplings from single manufacturer.
2. Description: Elastomeric sleeve with stainless-steel shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.

D. Shielded, Flexible Couplings:
1. Source Limitations: Obtain shielded, flexible couplings from single manufacturer.
2. Description: ASTM C1460, elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.

E. Ring-Type, Flexible Couplings:
1. Source Limitations: Obtain ring-type, flexible couplings from single manufacturer.
2. Description: Elastomeric compression seal with dimensions to fit inside bell of larger pipe and for spigot of smaller pipe to fit inside ring.

2.5 CLEANOUTS

A. PVC Cleanouts:

1. Source Limitations: Obtain PVC cleanouts from single manufacturer.
2. Description: PVC body with PVC threaded plug. Include PVC sewer pipe fitting and riser to cleanout of same material as sewer piping.

2.6 MANHOLES

A. Standard Precast Concrete Manholes:

1. Description: ASTM C478, precast, reinforced concrete, of depth indicated, with provision for sealant joints.
2. Diameter: 48 inches minimum unless otherwise indicated.
3. Ballast: Increase thickness of precast concrete sections or add concrete to base section as required to prevent flotation.

4. Base Section: 6-inch minimum thickness for floor slab and 4-inch minimum thickness for walls and base riser section, and separate base slab or base section with integral floor.
5. Riser Sections: 4-inch minimum thickness, and lengths to provide depth indicated.
6. Top Section: Eccentric-cone type unless concentric-cone or flat-slab-top type is indicated, and top of cone of size that matches grade rings.
7. Joint Sealant: ASTM C990, bitumen or butyl rubber.
8. Resilient Pipe Connectors: ASTM C923, cast or fitted into manhole walls, for each pipe connection.
9. Steps: Individual FRP steps; FRP ladder; or ASTM A615/A615M, deformed, 1/2-inch steel reinforcing rods encased in ASTM D4101, PP, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at 12- to 16-inch intervals. Omit steps if total depth from floor of manhole to finished grade is less than 60 inches.
10. Grade Rings: Reinforced-concrete rings, 6- to 9-inch total thickness, to match diameter of manhole frame and cover, and height as required to adjust manhole frame and cover to indicated elevation and slope.

B. Manhole Frames and Covers:

1. Description: Ferrous; 24-inch ID by 7- to 9-inch riser with 4-inch- minimum width flange and 26-inch- diameter cover. Include indented top design with lettering cast into cover, using wording equivalent to "STORM SEWER."
2. Material: ASTM A536, Grade 60-40-18 ductile iron unless otherwise indicated.

2.7 CONCRETE

A. General: Cast-in-place concrete in accordance with ACI 318, ACI 350, and the following:

1. Cement: ASTM C150/C150M, Type II.
2. Fine Aggregate: ASTM C33/C33M, sand.
3. Coarse Aggregate: ASTM C33/C33M, crushed gravel.
4. Water: Potable.

B. Portland Cement Design Mix: 4000 psi minimum, with 0.45 maximum water/cementitious materials ratio.

1. Reinforcing Fabric: ASTM A1064/A1064M, steel, welded wire fabric, plain.
2. Reinforcing Bars: ASTM A615/A615M, Grade 60 (420 MPa) deformed steel.

C. Manhole Channels and Benches: Factory or field formed from concrete. Portland cement design mix, 4000 psi minimum, with 0.45 maximum water/cementitious materials ratio. Include channels and benches in manholes.

1. Channels: Concrete invert, formed to same width as connected piping, with height of vertical sides to three-fourths of pipe diameter. Form curved channels with smooth, uniform radius and slope.

    a. Invert Slope: 1 percent through manhole.

2. Benches: Concrete, sloped to drain into channel.

    a. Slope: 4 percent.

D. Ballast and Pipe Supports: Portland cement design mix, 3000 psi minimum, with 0.58 maximum water/cementitious materials ratio.

1. Reinforcing Fabric: ASTM A1064/A1064M, steel, welded wire fabric, plain.
2. Reinforcing Bars: ASTM A615/A615M, Grade 60 (420 MPa) deformed steel.

2.8 CATCH BASINS

A. Standard Precast Concrete Catch Basins:

1. Description: ASTM C478, precast, reinforced concrete, of depth indicated, with provision for sealant joints.
2. Base Section: 6-inch minimum thickness for floor slab and 4-inch minimum thickness for walls and base riser section, and separate base slab or base section with integral floor.
3. Riser Sections: 4-inch minimum thickness, 48-inch diameter, and lengths to provide depth indicated.
4. Top Section: Eccentric-cone type unless concentric-cone or flat-slab-top type is indicated. Top of cone of size that matches grade rings.
5. Joint Sealant: ASTM C990, bitumen or butyl rubber.
6. Grade Rings: Include two or three reinforced-concrete rings, of 6- to 9-inch total thickness, that match 24-inch- diameter frame and grate.
7. Steps: Individual FRP steps; FRP ladder; or ASTM A615/A615M, deformed, 1/2-inch steel reinforcing rods encased in ASTM D4101, PP, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at 12- to 16-inch intervals. Omit steps if total depth from floor of catch basin to finished grade is less than 60 inches.
8. Pipe Connectors: ASTM C923, resilient, of size required, for each pipe connecting to base section.

B. Frames and Grates: ASTM A536, Grade 60-40-18, ductile iron designed for A-16 (AASHTO HS20-44), structural loading. Include flat grate with small square or short-slotted drainage openings.

1. Size: 24 by 24 inches minimum unless otherwise indicated.
2. Grate Free Area: Approximately 50 percent unless otherwise indicated.

C. Frames and Grates: ASTM A536, Grade 60-40-18, ductile iron designed for A-16 (AASHTO HS20-44), structural loading. Include 24-inch ID by 7- to 9-inch riser with 4-inch-minimum width flange, and 26-inch- diameter flat grate with small square or short-slotted drainage openings.

1. Grate Free Area: Approximately 50 percent unless otherwise indicated.

2.9 PIPE OUTLETS

A. Head Walls: Cast-in-place reinforced concrete, with apron and tapered sides.

B. Riprap Basins: Broken, irregularly sized and shaped, graded stone in accordance with Maryland Department of Environment Soil Erosion and Sediment Control Standards and Specifications.

PART 3 - EXECUTION

3.1 EARTHWORK

A. Excavation, trenching, and backfilling are specified in Section 312000 "Earth Moving."

3.2 PIPING INSTALLATION

A. General Locations and Arrangements: Drawing plans and details indicate general location and arrangement of underground storm drainage piping. Location and arrangement of piping layout take into account design considerations. Install piping as indicated, to extent practical. Where specific installation is not indicated, follow piping manufacturer's written instructions.

B. Install piping beginning at low point, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream. Install gaskets, seals, sleeves, and couplings in accordance with manufacturer's written instructions for use of lubricants, cements, and other installation requirements.

C. Install manholes for changes in direction unless fittings are indicated. Use fittings for branch connections unless direct tap into existing sewer is indicated.

D. Install proper size increasers, reducers, and couplings where different sizes or materials of pipes and fittings are connected. Reducing size of piping in direction of flow is prohibited.

E. Install gravity-flow, nonpressure drainage piping in accordance with the following:

1. Install piping pitched down in direction of flow.
2. Install piping NPS 6 and larger with restrained joints at tee fittings and at changes in direction. Use corrosion-resistant rods, pipe or fitting manufacturer's proprietary restraint system, or cast-in-place concrete supports or anchors.
3. Install piping with 36-inch-minimum cover.
4. Install PE corrugated sewer piping in accordance with ASTM D2321.
5. Install PVC piping in accordance with ASTM D2321 and ASTM F1668.
6. Install reinforced-concrete sewer piping in accordance with ASTM C1479 and ACPA's "Concrete Pipe Installation Manual."

3.3 PIPE JOINT CONSTRUCTION

A. Join gravity-flow, nonpressure drainage piping in accordance with the following:
1. Join corrugated-PE piping in accordance with ASTM D3212 for push-on joints.
2. Join PVC piping in accordance with ASTM D2321 and ASTM F891 for solvent-cemented joints.
3. Join reinforced-concrete sewer piping in accordance with ACPA's "Concrete Pipe Installation Manual" for rubber-gasketed joints.
4. Join dissimilar pipe materials with nonpressure-type flexible couplings.

3.4 CLEANOUT INSTALLATION

A. Install cleanouts and riser extensions from sewer pipes to cleanouts at grade. Use cast-iron soil pipe fittings in sewer pipes at branches for cleanouts and cast-iron soil pipe for riser extensions to cleanouts. Install piping so cleanouts open in direction of flow in sewer pipe.

1. Use Light-Duty, top-loading classification cleanouts in earth or unpaved foot-traffic areas.

B. Set cleanout frames and covers as shown.

3.5 MANHOLE INSTALLATION

A. General: Install manholes, complete with appurtenances and accessories indicated.

B. Install precast concrete manhole sections with sealants in accordance with ASTM C891.

C. Where specific manhole construction is not indicated, follow manhole manufacturer's written instructions.

D. Set tops of frames and covers flush with finished surface of manholes that occur in pavements. Set tops 3 inches above finished surface elsewhere unless otherwise indicated.

3.6 CATCH BASIN INSTALLATION

A. Construct catch basins to sizes and shapes indicated.

B. Set frames and grates to elevations indicated.

3.7 STORMWATER OUTLET INSTALLATION

A. Construct inlet head walls, aprons, and sides of reinforced concrete, as indicated.

B. Construct riprap of broken stone, as indicated.

C. Install outlets that spill onto grade, anchored with concrete, where indicated.

D. Install outlets that spill onto grade, with flared end sections that match pipe, where indicated.

3.8 CONCRETE PLACEMENT

A. Place cast-in-place concrete in accordance with ACI 318.

3.9 CONNECTIONS

A. Connect nonpressure, gravity-flow drainage piping in building's storm building drains specified in Section 221413 "Facility Storm Drainage Piping."

B. Make connections to existing piping and underground manholes.

1. Use commercially manufactured wye fittings for piping branch connections. Remove section of existing pipe; install wye fitting into existing piping; and encase entire wye fitting, plus 6-inch overlap, with not less than 6 inches of concrete with 28-day compressive strength of 3000 psi.
2. Make branch connections from side into existing piping, NPS 4 to NPS 20. Remove section of existing pipe, install wye fitting into existing piping, and encase entire wye with not less than 6 inches of concrete with 28-day compressive strength of 3000 psi.

3. Make branch connections from side into existing piping, NPS 21 or larger, or to underground manholes and structures by cutting into existing unit and creating an opening large enough to allow 3 inches of concrete to be packed around entering connection. Cut end of connection pipe passing through pipe or structure wall to conform to shape of and be flush with inside wall unless otherwise indicated. On outside of pipe, manhole, or structure wall, encase entering connection in 6 inches of concrete for minimum length of 12 inches to provide additional support of collar from connection to undisturbed ground.

    a. Use concrete that will attain a minimum 28-day compressive strength of 3000 psi unless otherwise indicated.
    b. Use epoxy-bonding compound as interface between new and existing concrete and piping materials.

4. Protect existing piping, manholes, and structures to prevent concrete or debris from entering while making tap connections. Remove debris or other extraneous material that may accumulate.

C. Pipe couplings, expansion joints, and deflection fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.

1. Use nonpressure-type flexible couplings where required to join gravity-flow, nonpressure sewer piping unless otherwise indicated.

3.10 CLOSING ABANDONED STORM DRAINAGE SYSTEMS

A. Abandoned Piping: Close open ends of abandoned underground piping indicated to remain in place. Include closures strong enough to withstand hydrostatic and earth pressures that may result after ends of abandoned piping have been closed. Use either procedure below:

1. Close open ends of piping with at least 8-inch- thick, brick masonry bulkheads.
2. Close open ends of piping with threaded metal caps, plastic plugs, or other acceptable methods suitable for size and type of material being closed. Do not use wood plugs.

B. Backfill to grade in accordance with Section 312000 "Earth Moving."

3.11 IDENTIFICATION

A. Materials and their installation are specified in Section 312000 "Earth Moving." Arrange for installation of green warning tape directly over piping and at outside edge of underground structures.

1. Use warning tape or detectable warning tape over ferrous piping.
2. Use detectable warning tape over nonferrous piping and over edges of underground structures.

3.12 FIELD QUALITY CONTROL

A. Inspect interior of piping to determine whether line displacement or other damage has occurred. Inspect after approximately 24 inches of backfill is in place, and again at completion of Project.

1. Submit separate reports for each system inspection.

2. Defects requiring correction include the following:

    a. Alignment: Less than full diameter of inside of pipe is visible between structures.
    b. Deflection: Flexible piping with deflection that prevents passage of ball or cylinder of size not less than 92.5 percent of piping diameter.
    c. Damage: Crushed, broken, cracked, or otherwise damaged piping.
    d. Infiltration: Water leakage into piping.
    e. Exfiltration: Water leakage from or around piping.

3. Replace defective piping using new materials, and repeat inspections until defects are within allowances specified.
4. Reinspect and repeat procedure until results are satisfactory.

B. Test new piping systems, and parts of existing systems that have been altered, extended, or repaired, for leaks and defects.

1. Do not enclose, cover, or put into service before inspection and approval.
2. Test completed piping systems in accordance with requirements of authorities having jurisdiction.
3. Schedule tests and inspections by authorities having jurisdiction with at least 24 hours' advance notice.
4. Submit separate report for each test.
5. Gravity-Flow Storm Drainage Piping: Test in accordance with requirements of authorities having jurisdiction, UNI-B-6, and the following:

    a. Exception: Piping with soiltight joints unless required by authorities having jurisdiction.
    b. Option: Test plastic piping in accordance with ASTM F1417.

C. Leaks and loss in test pressure constitute defects that must be repaired.

D. Replace leaking piping using new materials, and repeat testing until leakage is within allowances specified.

3.13 CLEANING

A. Clean interior of piping of dirt and superfluous materials. Flush with potable water.
